This publication is listed in bibliographic services, including Current Contents and Index Medicus.

Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Contents

Introduction.................................1

Lipid Mediators of Hypersensitivity
Bach, M.K. (Kalamazoo, Mich.) ......................10

Introduction.................................10
Nomenclature and General Overview..................11
Isolation Separation and Assay Procedures...............13
Radioimmunoassays.............................14
High-Pressure Liquid Chromatography..................15
Plasma Levels of Sulfidopeptide LTs..................15
The 5-Lipoxygenase Pathway........................16
Arachidonate Mobilization.........................16
The 5-Lipoxygenase..............................17
Leukotriene C4 Synthase.........................21
Epoxide Hydrolase..............................21
LT Metabolism.................................22
Sources of Products of the 5-LO Pathway.............24
Actions of Metabolites of the 5-LO Pathway...........27
Receptors for LTs................................36
The 15-Lipoxygenase Pathway................................40
Biosynthesis and Metabolism of 15-HETE..........................40
Sources of 15-HETE.............................................41
Actions of 15-HETE.............................................42
The Cyclooxygenase Pathway.....................................43
Thromboxane......................................................44
Prostaglandin D2 and 9a, 11-Prostaglandin2......................45
Platelet-Activating Factor........................................45
Biosynthesis and Metabolism of PAF...............................46
Sources of PAF.....................................................47
Actions of PAF.....................................................47
Receptors for PAF...............................................50
PAF Antagonists...................................................51
Indirect Effects of Lipid Mediators and Interactions with Other Mediators........52
Cell-to-Cell Interaction in the Biosynthesis of Eicosanoids..............52
Leukotriene-Induced Mobilization of Arachidonate and Its Sequelae.........54

Contents VI

Augmentative and Inhibitory Interactions between the Lipid Mediators........54
Interactions between Lipid Mediators and Other Agonists and Cytokines.......56
Concluding Remarks.............................................61
References.......................................................62

The Release of Arachidonic Acid from Cellular Lipids
Hong, Suchen L. (Boston, Mass) ..................................99

Introduction.......................................................99
Phospholipid and Arachidonic Acid Contents: Endogenous and Radioactive Isotope-Labeled........................................100
Properties of Agonist-Stimulated Arachidonic Acid Release and Eicosanoid Synthesis..................................................106
Turnover of Phospholipids in MC5-5 and Vascular Endothelial Cells............108
Activated Phospholipases Hydrolyzing Phosphoinositides........................113
Phosphoinositide-Specific Phospholipase C..................................113
PI-Hydrolyzing Phospholipase A2......................................116
Activated Phospholipases Hydrolyzing PC, PE and PS........................118
Is Shuffling of Arachidonic Acid from Phospholipids to PI Required before Its Release? ........................................119
Is Transfer of Arachidonic Acid from Phospholipids to Alkenyl-PE Necessary for Its Release? .................................120
Subject Index.................................207
