Drug Dosage
The author and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Contents

Acknowledgements IX
Preface X
1. History 1
2. What is Hypersensitivity Pneumonitis? 4
3. Who gets Hypersensitivity Pneumonitis? 6
Immunologic Reactivity of the Host: Atopic or Nonatopic 6
HLA Associations 7
Role of P1 Erythrocyte Antigen 7
Smoking 7
Nature of the Antigenic Material 8
Size of the Antigenic Material 8
Intensity of Exposure 8
Infection 8
Role of Air Pollution and Toxic Inhalants 9
4. Pulmonary Granulomas 11
Treatment of Sarcoidosis 76
Course and Prognosis 78
Kveim Test in Sarcoidosis 78
Gallium Lung Scanning 78
Bronchoalveolar Lavage 79
Immunopathogenesis 79
Interstitial Lung Disease in Connective Tissue Disorders 81
Rheumatoid Pulmonary Fibrosis 83
Interstitial Lung Disease Due to Systemic Lupus Erythematosus 84
Progressive Systemic Sclerosis 86
Polymyositis-Dermatomyositis (PM-DM) 88
Pulmonary Fibrosis of Mixed Connective Tissue Disease 89
Pneumocystis carinii 90
Diagnostic Methods 93
Pulmonary Lymphangiomyomatosis 94
Eosinophilic Granuloma 96
Asbestosis 99
Berylliosis 101
Hard Metal Pneumoconiosis 103
Talc Pneumoconiosis (Talcosis) 105
Pulmonary Drug-Induced Granulomatous Disorders 106
Military Tuberculosis 109
Histoplasmosis 110
Amyloidosis 111
Lymphangitic Carcinomatosis 113
Pulmonary Vasculitis with Granulomatosis 114
15 Diagnostic Caveats 116
Think of Hypersensitivity Pneumonitis 116

Contents VII

Recognize the Temporal Relationship between the Appearance of Symptoms and Occupational or Environmental Exposure 116
Chest Roentgenograms Are Not Specific 116
Lung Function Tests Are Not Diagnostic of Hypersensitivity Pneumonitis 119
Routine Laboratory Tests are Unhelpful 119
Serum Precipitins 119
Skin Tests Are Inadequate and Unhelpful 120
Lung Biopsy 120
Bronchoalveolar Lavage 121
Inhalation Challenge 121
16. Common and Uncommon Syndromes 122
Suberosis 168
Vineyard Sprayer's Lung 170
New Guinea Lung 170
Sisal Worker's Lungs 171
Coffee Worker's Lung 171
Pituitary Snuff Taker's Lung 172
Sporobolomyces-Induced Hypersensitivity Pneumonitis 172
Furrier's Lung 173
Maltworker's Lung 173
Paprika Splitter's Lung 174
Grain Weevil Disease 175
Feather-Picker's Disease 175
Smallpox Handler's Lung 175
Potato Riddler's Lung 176
Alginate Pulmonary Hypersensitivity 176
Subject Index 179

Acknowledgements

Many individuals have helped directly or indirectly in the preparation of this monograph. I am indebted to my colleagues at the Los Angeles County – University of Southern California Medical Center, Los Angeles, and the physicians in hospitals and clinical practices throughout the country who have referred patients with hypersensitivity pneumonitis to me. Special thanks are due to Drs. Thomas Boylen, Kevin Lake, Crawford Judge, Michael Koss, Adrian Williams and James Tuchschmidt. Dr. Takateru Izumi (Chest Research Institute, Kyoto, Japan), and Dr. Teruo Tachibana (Osaka, Japan) were particularly kind. Illustrations for the chapter on suberosis were provided by late Dr. Thomé Villar of Lisbon, Portugal. Most of the illustrations and the photographic material are the excellent work of Andy Gero and his staff of the Medical Photography Unit of the LAC-USC Medical Center. I am most indebted to Ms. Linda Goggins, my secretary, for her help in typing the manuscript. Finally, my deep appreciation and gratitude to Maggie, my wife, without whose help this monograph would never have seen the light of day.

Preface

Although the disease entity, hypersensitivity pneumonitis, in one form or another, has been with us for the last three decades, only recently has it begun to attract attention from practitioners of various medical disciplines. This relatively obscure, poorly understood, yet universally observed clinical
syndrome is now vigorously pursued by clinicians, pulmonologists, epidemiologists, pathologists, radiologists, physiologists and immunologists. Their concerted efforts have provided, and continue to add, valuable information to the treasure trove of granulomatous lung disease. Hypersensitivity Pneumonitis: A Clinical Approach is a summary of the ever-growing field with an appropriate balance of clinical medicine, immunological advances and laboratory information. The book will serve as a practical introductory guide to physicians in training in internal medicine, pulmonology, allergy and immunology, and pathology. Busy clinicians who need quick access to essentials of hypersensitivity pneumonitis will find this easily readable and well-illustrated manual a handy companion.
