Developments in Ophthalmology

Continuation of 'Bibliotheca Ophthalmologica', 'Advances in Ophthalmology', and 'Modem Problems in Ophthalmology'.
Founded 1926 as 'Abhandlungen aus der Augenheilkunde und ihren Grenzgebieten' by C. Behr, Hamburg and J. Meller, Wien.

Bibliographic Indices
This publication is listed in bibliographic services, including Current Contents® and Index Medicus.
Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Preface

The development of diagnostic procedures in the field of orbital echography, computed tomography, and magnetic resonance imaging as well as in the antibody measurement provided new methods to detect the characteristic features of Graves' ophthalmopathy. Apart from the unknown etiology of this disease of the intraorbital extraocular structures little is known about the natural course of the disease. Nearly all studies concerning the grading and the results of treatment have the drawback of little objective follow-up criteria. Now, the diagnostic tools for the investigation of some of the open questions are available and time has come to use these possibilities in a critical and cooperative manner. Therefore, the most engaged workers in the above mentioned fields were called together for a workshop preceding the Henning symposium 'Schilddrüse 87' to discuss their methods with thyroidologists, ophthalmologists and specialized surgeons with the aim to stimulate a closer interdisciplinary cooperation between all those who are concerned with diagnosis and treatment of patients with Graves' ophthalmopathy.
