Bibliographic Indices. This publication is listed in bibliographic services, including Current
Contents® and
Index Medicus.

Drug Dosage. The authors and the publisher have exerted every effort to ensure that drug
selection and
dosage set forth in this text are in accord with current recommendations and practice at the time of
publication.
However, in view of ongoing research, changes in government regulations, and the constant flow
of information
relating to drug therapy and drug reactions, the reader is urged to check the package insert for
each drug for any
change in indications and dosage and for added warnings and precautions. This is particularly
important when
the recommended agent is a new and/or infrequently employed drug.

Preface XI

Tissue Effects, Type of Lasers, and Safety in Laser Surgery
Tissue Effects of CO2 Laser and Nd:YAG Laser 1
Lippert, B.M.; Werner, J.A.; Rudert, H. (Kiel)
In vivo Models for Studies of Laser Effects on Blood Vessels 5

Schwager, K. (Würzburg); Waner, M.; Flock, S. (Little Rock, Ark.)
Characteristic Features of Wound Healing in Laser-Induced Incisions 8

Schünke, M. (Kiel); Krüss, C. (Westerland/Sylt); Mecke, H. (Berlin);
Werner, J.A. (Kiel)
Anesthesiological Problems of Endolaryngeal and Endotracheal Laser Surgery 15

Jeckström, W; Wawersik, I; Hoffmann, P.; Werner, J.A.; Lippert, B.M.;
Christiansen, B.; Paustian, R.; Sowada, U. (Kiel)
Problems Caused by Laser Plume, Especially Considering Laser Microlaryngoscopy 20

Wöllmer, W (Hamburg)
Ophthalmological Risks and Hazards of Laser Use in the Head and Neck Region 23

Schmidt, F.U. (Kiel)
Laser Delivery Systems and Laser Instruments in Otorhinolaryngology 27

Werner, J.A.; Lippert, B.M.; Heissenberg, M.C.; Rudert, H. (Kiel)

Photodynamic Therapy
Mechanisms of Phototoxic Effects in Photodynamic Therapy 31

Wustrow, Th.P.U. (München)
Experimental Photodynamic Therapy of the Larynx Using 5-Aminolaevulinic Acid 36

Experimental Studies on the Phototoxic Effect of Cytostatic Agents. Results and Outlook 39

Lippert, B.M.; Schade, W.; Gottschlich, S.; Werner, J.A. (Kiel)
Meta-Tetrahydroxyphenylchlorin: A New Photosensitizer for Photodynamic Therapy of Head and Neck Tumors 44

Heinritz, H.; Waldfahrer, E; Benzel, W. (Erlangen); Sroka, R. (Neuherberg);
Iro, H. (Erlangen)
Photodynamic Therapy of Superficial Skin Tumors following Local Application of Delta-Aminolaevulinic Acid 48

Heinritz, H.; Benzel, W. (Erlangen); Sroka, R. (Neuherberg); Iro, H. (Erlangen)
Photodynamic Therapy of Head and Neck Tumors 53

Endolaryngeal CO2 Laser Microsurgery of Early Vocal Cord Cancer. A Retrospective Study 219
Csanády, M.; Czigner, J.; Sávay, L. (Szeged)

Technique and Results of Transoral Laser Surgery for Small Vocal Cord Carcinomas 222
Rudert, H. (Kiel)

Contents VIII

Technique and Results of Transoral Laser Surgery of Supraglottic Carcinomas 227
Rudert, H. (Kiel)

Management of Supraglottic Cancer: Selected Endoscopic Laser Resection and Postoperative Irradiation 231
Davis, R.K.; Hayes, J.K. (Salt Lade City, Utah)

Functional Results following Partial Supraglottic Resection. Comparison of Conventional Surgery vs. Transoral Laser Microsurgery 237
Köllisch, M.; Werner, J.A.; Lippert, B.M.; Rudert, H. (Kiel)
Preface

Medical laser techniques and technology develop very rapidly. Frequent updates are important to reflect the present state of the art. For this purpose, conferences on this subject have been held at the Department of Otorhinolaryngology, Head and Neck Surgery of the University of Kiel since 1985, and will be continued in the future.

The first two meetings in 1985 and 1988 dealt almost exclusively with applications of the CO2 laser in otorhinolaryngology. During the third conference, in 1990, the use of the Nd:YAG laser was discussed, especially in the treatment of hemangiomas. This 4th Laser Congress presents an overview of six additional laser types already being used (for laser treatment of diseases of the middle and the inner ear, vascular malformations, diseases of the nasal cavity and the paranasal sinuses as well as benign and malignant tumors of the skin). Worldwide, transoral CO2 laser surgery for laryngeal and hypopharyngeal cancer is a highly controversial topic. Long-term results show that it is justified to give transoral laser therapy an established place in the treatment of carcinomas, equal to conventional surgical partial resection of laryngeal or hypopharyngeal cancer. However, one has to avoid uncritical application of the CO2 laser. It must satisfy the already complex criteria for conventional surgery of carcinomas.

Authors of the 4th Symposium of Lasers in Otorhinolaryngology, Head and Neck Surgery, Kiel, have been invited not only from Germany but also from Denmark, the Netherlands, Austria, Poland, Switzerland, Sweden, Hungary and the USA. They all have extensive experience with particular laser systems. The organizers of this meeting are proud to say that without exception everyone who was invited to participate did. Papers other than the invited lectures have been accepted to illustrate the situation of laser therapy outside
the well-known centers.
The editors are delighted that almost all the speakers submitted their manuscripts for this book and for this we would like to thank them. The organizers would like to express their gratitude to the staff of Karger Publishers, Basel, for their spontaneous offer to publish all the lectures in the well-respected series Advances in Oto-Rhino-Laryngology in English, since there is presently no international up-to-date overview in which all the therapeutic applications of lasers in otorhinolaryngology, head and neck surgery are discussed.

Heinrich Rudert
Jochen A. Werner
