Pediatric Nutrition in Practice
2nd, revised edition

Editor
B. Koletzko

Co-Editors
J. Bhatia, Z.A. Bhutta, P. Cooper, M. Makrides, R. Uauy, W. Wang

There is no other time in life when the provision of adequate and balanced nutrition is of greater importance than during infancy and childhood. During this dynamic phase characterized by rapid growth, development and developmental plasticity, a sufficient amount and appropriate composition of nutrients both in health and disease are of key importance for growth, functional outcomes such as cognition and immune response, and the metabolic programming of long-term health and well-being.

This compact reference text provides concise information to readers who seek quick guidance on practical issues in the nutrition of infants, children and adolescents. After the success of the first edition, which sold more than 50'000 copies in several languages, the editors prepared this thoroughly revised and updated second edition which focuses again on nutritional challenges in both affluent and poor populations around the world. Serving as a practical reference guide, this book will contribute to further improving the quality of feeding of healthy infants and children, as well as enhancing the standards of nutritional care in sick children.

Selected Contents

- List of Contributors
- Preface

Specific Aspects of Childhood Nutrition
- Child Growth: Kim F. Michaelsen
- Nutritional Assessment
- Nutritional Needs
- Early Nutrition and Long-Term Health: Berthold Koletzko
- Gut Microbiota in Infants: Akhito Endo, Mimi L.K. Tang, Seppo Salminen

Nutrition of Healthy Infants, Children and Adolescents
- Breastfeeding: Kim F. Michaelsen

- Marketing of Breast Milk Substitutes: Neelam Kler, Naveen Gupta, Anup Thakur
- Complementary Foods: Mary Fewtrell
- Allergy Prevention through Early Nutrition: Sibylle Koletzko
- Nutrition in Pregnancy and Lactation: Lenka Malek, Maria Makrides
- Vegetarian Diets: Claire T. McEvoy, Jayne V. Woodside

Nutritional Challenges in Special Conditions and Diseases
- Primary and Secondary Malnutrition: Lubaba Shahrin, Mohammad Jobayer Chisti, Tahmeed Ahmed
- Micronutrient Deficiencies in Children: Ali Faisal Saleem, Zulfiquar A. Bhutta
- Nutritional Management in Cholestatic Liver Disease: Bram P. Raphael
- Malabsorptive Disorders and Short Bowel Syndrome: Olivier Goulet
- Celiac Disease: Riccardo Troncone, Marco Sarno
- Food Intolerance and Allergy: Ralf G. Heine
- Renal and Gastroesophageal Reflux: Roam Zevit, Raanan Shamir
- Preterm and Low-Birth-Weight Infants: Ekhard E. Ziegler
- Nutritional Management of Diabetes in Childhood: Carmel Smart
- Nutrition in Cystic Fibrosis: Michael Wilshanski
- Nutritional Management in Children with Chronic Kidney Disease: Lesley Rees
- Haematology: John W.L. Puntis

Annexes
- The WHO Child Growth Standards: Mercedes de Onis, John W.L. Puntis
- The CDC and Euro Growth Charts: Ekhard E. Ziegler
- Reference Nutrient Intakes of Infants, Children and Adolescents: Berthold Koletzko, Katharina Dokoupi
- Feeding My Baby – Advice for Families: Berthold Koletzko, Katharina Dokoupi

Guidelines for Authors

Aims and Scope
This highly respected and frequently cited journal is a prime source of information in the area of fetal and neonatal research. Original papers present research on all aspects of neonatology, fetal medicine and developmental biology. These papers encompass both basic science and clinical research including randomised trials, observational studies and epidemiology. Basic science research covers molecular biology, molecular genetics, physiology, biochemistry and pharmacology in fetal and neonatal life. In addition to the classic features the journal accepts papers for the sections Research Briefings and Sources of Neonatal Medicine (historical pieces). Papers reporting results of animal studies should be based upon hypotheses that relate to developmental processes or disorders in the human fetus or neonate.

Submission
Manuscripts written in English should be submitted using the online submission website at: www.karger.com/neo
Should you experience any problems with your submission, please contact: neo@karger.com
S. Karger AG
Editorial Office 'Neonatology'
P.O. Box
CH–4009 Basel (Switzerland)
All manuscripts must be accompanied by a cover letter and the copyright transfer statement with all authors’ signatures (handwritten) confirming that they agree with the publication of the paper. Names, postal and e-mail addresses of four international experts in the appropriate area of research should accompany each manuscript. Selected scientist(s) will be invited to act as referee(s). Referees suggested should not be from the same institution as the author and should have expert knowledge of the subject.
Manuscripts may be submitted to the following sections:
• Reviews
• Systematic Reviews and Meta-Analyses
• Original Papers
• Consent Statements
• Short Communications
• Novel Insights from Clinical Practice
• Research Briefings
• Sources of Neonatal Medicine
• Letters to the Editor

Reviews/Systematic Reviews and Meta-Analyses
Most reviews are submitted upon invitation. However, the editors are open to unsolicited reviews. Authors planning such a review are requested to contact the Editorial Office with a one page outline of the intended review. All reviews are subject to peer review. Systematic reviews should be reported using the format of the Cochrane Neonatal Review Group (www.neonatal.cochrane.org/welcome).

Original Papers
Original articles should not exceed a printed length of five pages, i.e. generally not more than 2,500 words of text accompanied by not more than 4–6 figures or tables as well as approx. 25 references.

Original Papers – Clinical Trials
Reports of randomised clinical trials should conform with CONSORT guidelines (www.consort-statement.org/consort-statement).

Short Communications
Short reports, brief laboratory observations, and preliminary communications, can be submitted for accelerated publication under ‘Short Communications’. To qualify for rapid publication, such reports should not exceed a printed length of five pages, i.e. not more than 1,400 words of text accompanied by 2 figures or tables and from 5 to 10 references.

Novel Insights from Clinical Practice (formerly Case Reports)
The publication space available for case reports is very limited. The journal only considers case reports with significant new insights or that present cases that may lead to changes in clinical practice, that stimulate further research or seem to contradict established facts. Highlighted boxes containing one or two bullet points on ‘Established Facts’ (what is already known) and ‘Novel Insights’ (what new information has been gained) are required and should be placed on the first page of the report. These should be selected so as to reinforce the novelty of the clinical observation. The manuscript should be presented with an abstract (unstructured, max. 150 words), followed by introduction, case report and discussion. Maximum 2 figures or 2 tables or 1 figure and 1 table.

Conditions
All manuscripts are subject to editorial review. Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Neonatology and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

Conflict of Interest: All forms of support, including that from drug companies, and any potential source of conflict of interest should be acknowledged in the cover letter to the editor when applicable. The statement will be printed at the end of the article.

Ethics: Published research must comply with the guidelines for human studies and animal welfare regulations. Authors should state that subjects have given their informed consent and that the study protocol has been approved by the institute’s committee on human research. Further, they should also state that animal experiments conform to institutional standards.

Arrangement
Title page: The first page of each paper should indicate the title, the authors’ names, the institute where the work was conducted, and a short title for use as running head.

Line numbering: Lines should be numbered (1, 2, 3, etc.) and displayed in the left margin of the manuscript (line numbering can be added from the Page Setup or Format menu of word processing programs). The line numbering should be continuous throughout the entire manuscript (i.e., do not begin numbering from 1 again at the top of each page).

Background: Each paper needs an abstract of up to 250 words. It should be structured as follows:

Abstract: What is the major motive that prompted the study?
Objectives: What is the purpose of the study?
Methods: How was the study done?
Results: Most important findings
Conclusions: Most important conclusions

Footnotes: Avoid footnotes.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figure legends should be supplied on a separate page. For technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations on one block for reproduction (max. size 180 x 223 mm) or provide crop marks. Electronically submitted b/w halftone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings one of 800–1,200 dpi. Figure files must not be embedded in a document file but submitted separately.

Color illustrations: Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 960.00 per page.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surnames of the authors followed by initials should be given. There should be no punctuation other than a comma to separate the authors. Please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org). Consider using EndNote (http://endnote.com/downloads/styles).

Examples
(b) Papers published only with DOI numbers: AlFaleh K, Anabrees J, Basler D: Probiotics reduce the risk of necrotizing enterocolitis in preterm infants: a meta-analysis. Neonatology DOI: 10.1159/00035684.
(c) Edited books: Hausman GJ, Barb CR: Adipose tissue and the reproductive axis: biological aspects; in Levy-Marchal C, Pénicaud I (eds): Adipose Tissue Devel-

SI Units
SI units should be used. Listings of SI units may be found in the following publications:

Digital Object Identifier (DOI)
S. Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs can be useful in the future for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org.

Supplementary Material
Supplementary material is restricted to additional data that are not necessary for the scientific integrity and conclusions of the paper. Please note that all supplementary files will undergo editorial review and should be submitted together with the original manuscript. The Editors reserve the right to limit the scope and length of the supplementary material. Supplementary material must meet production quality standards for Web publication without the need for any modification or editing. In general, supplementary files should not exceed 10 Mb in size. All figures and tables should have titles and legends and all files should be supplied separately and named clearly. Acceptable files and formats are: Word or PDF files, Excel spreadsheets (only if the data cannot be converted properly to a PDF file), and video files (.mov, .avi, .mpeg).

Self-Archiving/Green Open Access
Karger permits authors to archive their pre-prints (i.e. pre-peer review) or post-prints (i.e. accepted manuscript after peer review but before production) on their personal or their institution’s internal website. In addition, authors may post their accepted manuscripts in public Open Access repositories and scientific networks (e.g. ResearchGate or Mendeley) no earlier than 12 months following publication of the final version of their article. For all self-archiving, the posted manuscripts must:
• Be used for noncommercial purposes only
• Be linked to the final version on www.karger.com
• Include the following statement:
  ‘This is the peer-reviewed but unedited manuscript version of the following article: [insert full citation, e.g. Cytogenet Genome Res 2014;142:227–238 (DOI: 10.1159/000361001)]. The final, published version is available at http://www.karger.com/?doi=[insert DOI number].’

It is the author’s responsibility to fulfill these requirements.

For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article.

Manuscripts to be archived in PubMed Central due to funding requirements will be submitted by Karger on the author’s behalf [see Funding Organizations (NIH etc.)].

For self-archiving Author’s Choice™ (Gold Open Access) articles, see Author’s Choice™.

Author’s Choice™
Karger’s Author’s Choice™ service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.karger.com. The option is available for a one-time fee of CHF 3,000.00, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

The final, published version of the article may be posted at any time and in any repository or on other websites, in accordance with the relevant Creative Commons license. Reposted Open Access articles must:
• Follow the terms of the relevant Creative Commons license
• Be linked to the final version on www.karger.com
• Include the following statement:
  ‘The final, published version of this article is available at http://www.karger.com/?doi=[insert DOI number].’

It is the author’s responsibility to fulfill these requirements.

For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article.

Funding Organizations (NIH etc.)
The U.S. National Institutes of Health (NIH) Public Access Policy mandates that accepted, peer-reviewed manuscripts are archived in its digital database, PubMed Central (PMC), within 12 months of the official publication date. As a service to authors, Karger submits NIH-funded articles to PMC on behalf of the authors immediately upon publication. The NIH assigns a PMCID within approximately 1 month and the manuscript will appear in PMC after a 12-month embargo. For authors making their paper Open Access through Author’s Choice™, the embargo will be overridden, thereby accelerating the accessibility of the article. Karger also complies with other funders’ requirements (including Wellcome Trust and RCUK) for submission to PMC. Authors should include information on their grants in the Acknowledgements section of their papers.

Page Charges
A charge of CHF 60.00 per page (except for invited reviews which are free) will be levied for the first 3 printed pages of an article. Each additional complete or partial page will be charged to the author at CHF 325.00. 3 printed pages are equal to approx. 9 manuscript pages (including tables, illustrations and references).

Proofs
Proofs are sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

Reprints
Order form and price list is sent with the pdf proofs. Orders submitted after the issue is printed are subject to considerably higher prices.

Antenatal, Prenatal and Intrapartum Care
- Antenatal factors and neonatal outcome
- Fetal nutrition
- Side-effects of the Cesarean delivery epidemic

Stabilization of High Risk Infants
- Delivery room handling of the newborn
- Stabilization techniques and non-invasive respiratory care
- Oxygen supplementation
- Temperature regulation

Latest Strategies on Respiratory Care
- Minimally invasive surfactant administration
- High frequency ventilation
- Strategies to reduce lung injury
- Apnea of prematurity

Brain Injury and ROP
- Pathogenesis and therapeutic strategies of ROP
- HIE and brain cooling
- Mesenchymal stem cells for severe IVH

BPD and PDA
- BPD - pathogenesis, outcome
- Postnatal corticosteroids
- Stem cell therapy
- Current approach to the PDA

Pre- and Postnatal Infections and Inflammation
- Chorioamnionitis
- Neonatal nosocomial sepsis
- Managing outbreaks of infection
- Biomarkers of neonatal infections

Nutrition, Metabolism and Optimal Growth
- Intravenous nutrition: Benefits and risks
- Challenges in preterm enteral nutrition
- Pathophysiology and new biomarkers of NEC
- Neonatal jaundice

Neuroprotection
- Antenatal prevention of fetal neurological impairment
- Neuroprotection for very preterm babies

Follow-Up of High-Risk Infants
Update on Resuscitation

Evidence-Based Medicine and Drugs in Newborns
Morbidity and Mortality in Preterm Infants in Asia
Nutrition of the Preterm Infant
Optimizing Neonatal Research

ROP: Basic Research, Clinical Concepts
Non-Invasive Ventilation Modes
Problems in Neonatal Infectious Diseases
Conventional Ventilation, High Frequency Ventilation
**DEADLINES**

- **Abstract submission**: Tuesday December 1st, 2015
- **Notification for acceptance**: Monday February 8, 2016
- **Early bird registration**: Tuesday March 1st, 2016

**SCIENTIFIC PROGRAM**

- Post-graduate courses: LFT & bronchoscopy
- Workshops
- Keynote lectures
- Topic sessions
- Young Investigator’s oral communications
- Interactive poster session

42nd Annual Meeting
of the Society of Neonatology and Paediatric Intensive Care Medicine
June 2 – 4, 2016 • Congress Center, Frankfurt / Main

CHAIRPERSON
Prof. Dr. med. Rolf Schlößer
Karin Schnabel
Universitätsklinik Frankfurt

PD Dr. med. Lothar Schrod
Susanne Ressel
Klinikum Frankfurt-Höchst

PRELIMINARY PROGRAMME

Topics
› Paediatric Emergency Medicine
› Difficult airway management
› Asphyxia and neonatal hypoxic ischemic encephalopathy
› Infants of drug-abusing mothers
› Foetal and neonatal circulation
› Stem cell therapies in neonatology
› Congenital malformations
› Sepsis on PICU
› Cardiology on PICU
› Ethical questions
› Children with strokes
› Extreme premature infants
› Congenital infections
› Psychiatric illnesses after premature birth
› Preliminary and final results of current multi-centre studies
› Dr House on the NICU and PICU: Interactive solutions for interesting cases
› Invasive and non-invasive ventilation

Topics in Nursing Practice
› Pain and pain relief in neonates and children
› Pros and cons – visitors and siblings on neonatal wards; parental presence during resuscitation etc.
› Hygiene in neonatology
› Ethics – finding a common language
› Post discharge care for high-risk neonates
› New developments in care

Workshops

ABSTRACT SUBMISSION
Please submit your abstract latest by January 31st 2016.

Analysis of Growth Trajectories

Editors
B. Koletzko
P. Rzehak
N. Regnault

Contents

Preface

• Analysis of Child Growth Trajectories: Rzehak, P.; Regnault, N.; Koletzko, B.
• Regulation of Early Human Growth: Impact on Long-Term Health: Koletzko, B.; Chourdakis M.; Grote, V.; Hellmuth, C.; Prell, C.; Rzehak, P.; Uhl, O.; Weber, M.
• Importance of Characterizing Growth Trajectories: Regnault, N.; Gillman, M.W.
• Historical Approaches to Human Growth Studies Limit the Present Understanding of Growth Biology: Lampl, M.; Mumert, A.
• Multilevel Modeling in the Context of Growth Modeling: Moerbeek, M.
• Modelling Childhood Growth Using Fractional Polynomials and Linear Splines: Tilling, K.; MacDonald-Wallis, C.; Lawlor, D.A.; Howe, L.D.
• Assessment of Fetal Growth by Customized Growth Charts: Gaillard, R.; Jaddoe, V.W.V.
• Postnatal Weight and Height Growth Modeling and Prediction of Body Mass Index as a Function of Time for the Study of Growth Determinants: Botton, J.; Scherdel, P.; Regnault, N.; Heude, B.; Charles, M.-A.; EDEN Mother-Child Cohort Study Group
• Comparative Study of Four Growth Models Applied to Weight and Height Growth Data in a Cohort of US Children from Birth to 9 Years: Regnault, N.; Gillman, M.W.; Kleinman, K.; Rifas-Shiman, S.; Botton, J.
• Retarded Tempo of Physiological Development in Childhood Delays the Onset of the Metabolic Syndrome in Adulthood: Sun, S.S.; Sima, A.P.; Himes, J.H.
• Longitudinal Models for Studying Multivariate Changes and Dynamics: Ferrer, E.; Gonzales, J.E.
• Mediation from Multilevel to Structural Equation Modeling: MacKinnon, D.P.; Valente, M.J.

New insights into the mechanisms of injury and neuroprotection

Cell Death and Plasticity in Developmental Brain Injury

Editors
F.J. Northington
P. McQuillen
S.W. Levison

The immature brain is vulnerable to stressors that may produce brain damage, leading to neurological dysfunction in survivors. The publication provides new insights into the mechanisms of injury and neuroprotection for developmental brain injuries and functional outcomes. Many aspects of neural progenitors in the response to and recovery from neonatal brain injuries are highlighted as well as reviews of preclinical models of encephalopathy of prematurity. Fyn in neurodevelopment and brain injury and perinatal infection. Further articles include information on the ethics of treatment of neonatal hypoxic-ischemic (HI) encephalopathy, hypoxia gene signaling and other caspase signaling pathways, modulation of p53 and arachidonic acid mechanisms for therapeutic benefit, and neurodevelopmental outcomes of experimental HI. Translational science contributions inform on important clinical areas, including ventilation-induced brain injury, in vivo monitoring of cerebral hemodynamics during HI and hypothermia and the effect of sepsis/inflammation in blocking the therapeutic effect of hypothermia in a neonatal HI model. This special issue is recommended to clinicians and basic and translational scientists who are interested in the developing nervous system, the mechanisms of injury to identify new therapeutic targets and the effect of both endogenous and exogenous cell-based attempts to support recovery from injury.

Contents

Reviews
• Preclinical Models of Encephalopathy of Prematurity: Jantzie, L.L.; Robinson, S.
• Beneficence and Nonmaleficence in Treating Neonatal Hypoxic-Ischemic Brain Injury: Tagin, M.; Zhu, C.; Gunn, A.J.
• Fyn in Neurodevelopment and Ischemic Brain Injury: Knox, R.; Jiang, X.

Cell Death
• Human Amnion Epithelial Cells Modulate Ventilation-Induced White Matter Pathology in Preterm Lambs: Barton, S.K.; Melville, J.M.; Tolcos, M.; Polglase, G.R.; McDougall, A.R.A.; Azhan, A.; Crossley, K.J.; Jenkins, G.; Moss, T.J.M.

• The Anti-Inflammatory Effects of the Small Molecule Pifithrin-μ on BV2 Microglia: Fleiss, B.; Chhor, V.; Rajadin, N.; Lebon, S.; Hagberg, H.; Gressens, P.; Thornton, C.
• Alteration in Downstream Hypoxia Gene Signaling in Neonatal Glutathione Peroxidase Overexpressing Mouse Brain after Hypoxia-Ischemia: Sheldon, R.A.; Sadjadi, R.; Lam, M.; Fitzgerald, R.; Ferriero, D.M.
• In vivo Monitoring of Cerebral Hemodynamics in the Immature Rat: Effects of Hypoxia-Ischemia and Hypothermia: Buckley, E.M.; Patel, S.D.; Miller, B.F.; Franceschini, M.A.; Vannucci, S.J.

Plasticity
• Nitric Oxide Pathway and Proliferation of Neural Progenitors in the Neonatal Rat: Pham, H.; Chan, A.; Kondziolka, D.; Gressens, P.; Charrier-Marlaurenc, S.; Baud, O.
• Dissociation in the Effects of Induced Neonatal Hypoxia-Ischemia on Rapid Auditory Processing and Spatial Working Memory in Male Rats: Smith, A.L.; Alexander, M.; Chrobak, J.J.; Rosenkrantz, T.S.; Fitch, R.H.
• Intrauterine Growth Restriction: Effects on Neural Progenitor Cell Proliferation and Angiogenesis in the Foetal Subventricular Zone: Toccos, M.; Markwick, R.; O’Dowd, R.; Martin, V.; Turnley, A.; Rees, S.

Medical Statistics has never been easier!

David E. Matthews  
Vernon T. Farewell

Using and Understanding Medical Statistics  
5th, revised and extended edition

The fifth revised edition of this highly successful book presents the most extensive enhancement since Using and Understanding Medical Statistics was first published 30 years ago. Without question, the single greatest change has been the inclusion of source code, together with selected output, for the award-winning, open-source, statistical package known as R. This innovation has enabled the authors to de-emphasize formulae and calculations, and let software do all of the 'heavy lifting'. This edition also introduces readers to several graphical statistical tools, such as Q-Q plots to check normality, residual plots for multiple regression models, funnel plots to detect publication bias in a meta-analysis and Bland-Altman plots for assessing agreement in clinical measurements. New examples that better serve the expository goals have been added to a half-dozen chapters. In addition, there are new sections describing exact confidence bands for the Kaplan-Meier estimator, as well as negative binomial and zero-inflated Poisson regression models for over-dispersed count data. The end result is not only an excellent introduction to medical statistics, but also an invaluable reference for every discerning reader of medical research literature.

Contents
Preface to the Fifth Edition
Prefaces to the Previous Editions
• Basic Concepts
• Tests of Significance
• Fisher's Test for 2 × 2 Contingency Tables
• Approximate Significance Tests for Contingency Tables
• Some Warnings concerning 2 × 2 Tables
• Kaplan-Meier or 'Actuarial' Survival Curves
• The Log-Rank or Mantel-Haenszel Test for Comparing Survival Curves
• An Introduction to the Normal Distribution
• Analyzing Normally Distributed Data
• Linear Regression Models for Medical Data
• Binary Logistic Regression
• Regression Models for Count Data
• Proportional Hazards Regression
• The Analysis of Longitudinal Data
• Analysis of Variance
• Data Analysis
• The Question of Sample Size
• The Design of Clinical Trials
• Further Comments regarding Clinical Trials
• Meta-Analysis
• Epidemiological Applications
• Diagnostic Tests
• Agreement and Reliability

This journal covers the most active and promising areas of current research in gynecology and obstetrics. Invited, well-referenced reviews by noted experts keep readers in touch with the general framework and direction of international study. Original papers report selected experimental and clinical investigations in all fields related to gynecology, obstetrics and reproduction. Short communications are published to allow immediate discussion of new data. The international and interdisciplinary character of this periodical provides an avenue to less accessible sources and to worldwide research for investigators and practitioners.

Since 1895 an active state-of-the-art platform for research!

Gynecologic and Obstetric Investigation

Editor-in-Chief
T.M. D’Hooghe, Leuven

This journal covers the most active and promising areas of current research in gynecology and obstetrics. Invited, well-referenced reviews by noted experts keep readers in touch with the general framework and direction of international study. Original papers report selected experimental and clinical investigations in all fields related to gynecology, obstetrics and reproduction. Short communications are published to allow immediate discussion of new data. The international and interdisciplinary character of this periodical provides an avenue to less accessible sources and to worldwide research for investigators and practitioners.

Gynecologic and Obstetric Investigation

Founded: 1995
Category: Clinical and Basic Research
Fields of Interest: Gynecology, Obstetrics

Listed in bibliographic services, including Journal Citation Reports, PubMed/MEDLINE, Biological Abstracts, Embase

2016: Volumes 81
6 issues per volume
Language: English
ISSN 0378–7346
e-ISSN 1423–002X

Impact Factor: 1.696

Selected contributions
- Prediction of Gestational Diabetes Early in Pregnancy: Targeting the Long-Term Complications: Correa, P.J.; Varghese, J.F. (Santiago); Sen, S. (Boston, Mass.); Blanes, S.E. (Santiago)
- Noninvasive Prenatal Diagnosis Using Next-Generation Sequencing: Xu, L.; Shi, R. (Shanghai)
- Fertility-Sparing Surgery in Ovarian Cancer Extended beyond the Ovaries: A Case Report and Review of the Literature: Petriollo, M. (Rome); Legge, F. (Campobasso); Ferrandina, G.; Monterisi, A.; Pedone Anchora, L.; Scambia, G. (Rome)
- The Patient-Centeredness of Endometriosis Care and Targets for Improvement: A Systematic Review: Dancet, E.A.F. (Leuven/Amsterdam); Apers, S. (Leuven); Kremer, J.A.M. Nelen, W.L.D.M. (Nijmegen); Sermeus, W.; D’Hooghe, T.M. (Leuven)

Low birthweight, caused by premature birth, poor intrauterine growth, or both, is known to be a strong predictor of morbidity and mortality risks in the first year of life and beyond. It has to be born in mind, though, that premature infants may need different clinical and nutritional interventions and are at risk for different morbidities than those small for gestational age.

This publication focuses on three main subjects: Global epidemiology, catch-up growth, and feeding practices. These topics have been selected to provide a solid contextual basis for the nature and extent of the problem, highlighting changes in prevalence and risk across different healthcare settings: The available data strongly suggest that growth outcomes are dependent on a multitude of environmental factors that interact with nutrient intakes.

Epidemiology, modern technology and the latest science are brought together to promote a better understanding of the short- and long-term needs and outcomes of low-birthweight babies, depending on whether they are born too small or too early.

Contents

- Preface
- Foreword
- Contributors

Global Epidemiology

- Global Prevalence of Small for Gestational Age Births: Black, R.E.
- Global Incidence of Preterm Birth: Tielsch, J.M.
- Nutritional and Reproductive Risk Factors for Small for Gestational Age and Preterm Births: Kozuki, N.; Lee, A.C.C.; Black, R.E.; Katz, J.
- Mortality Risk among Term and Preterm Small for Gestational Age Infants: Katz, J.; Lee, A.C.C.; Kozuki, N.; Black, R.E.
- Prevention of Intrauterine Growth Restriction and Preterm Birth with Presumptive Antibiotic Treatment of Pregnant Women: A Literature Review: Ashorn, P.; Vanhala, H.; Pakarinen, O.; Ashorn, U.; De Costa, A.

Catch-Up Growth

- Should We Promote Catch-Up Growth or Growth Acceleration in Low-Birthweight Infants? Singhal, A.
- Catch-Up Growth and Metabolic and Cognitive Outcomes in Adolescents Born Preterm: Embleton, N.D.; Skeath, T.
- Role of Specific Nutrients in Low-Birthweight Infants: Bhatia, J.
- Catch-Up Growth: Basic Mechanisms: Griffin, I.J.

Feeding Practices – Current and Improved?

- Human Milk Fortification: Simmer, K.
- Feeding the Larger Low-Birthweight Infant in a Resource-Poor Environment: Kirsten, G.F.
- Nutrient Needs for Catch-Up Growth in Low-Birthweight Infants: Ziegler, E.E.
- Human Milk Fortification in India: Kler, N.; Thakur, A.; Modii, M.; Kaur, A.; Garg, P.; Soni, A.; Saluja, S.
- Probiotic Supplementation for Preterm Neonates – What Lies Ahead? Patole, S.
