Genetic testing for patients with primary adrenal insufficiency

(see paper by Tsai et al., pp. 35–42)
Introducing the new interdisciplinary Karger journal

*Biomedicine Hub* is an interdisciplinary journal: a 'hub' for researchers, clinicians and public health professionals across biomedical disciplines to share research findings, ideas, theories, experimental results and clinical experience. *Biomedicine Hub* aims at facilitating the exchange of knowledge between disciplines, with a focus on translational science for the development of cutting-edge technologies and the improvement of health care. A further focus is on emerging interdisciplinary fields at the forefront of medicine.

Karger premium quality – open access – peer-reviewed – rapid publication

Get the full picture on [www.biomedicinehub.com](http://www.biomedicinehub.com)

- 16 internationally renowned senior editors
- over 170 Editorial Board Members
- from 35 countries
- specialized in 41 medical disciplines

*We invite you to submit now!*

Article Processing Charges (APC) are waived before June 30, 2016.

Guidelines for Authors

HORMONE RESEARCH IN PEDIATRICS

Aim and Scope
Hormone Research in Pediatrics aims to provide rapid publication of clinical investigations, mini reviews and novel insights from clinical experience, as well as experimental and methodological work related to paediatric and adolescent endocrinology. Correspondence is welcome, but publication of letters is at the discretion of the editors.

Submission
Manuscripts written in English should be submitted using the online submission website at: www.karger.com/hrp

Should you have any problems with your submission, please contact the Editorial Office:
hrp@karger.com
Prof. S. Cianfarani
S. Karger AG
Editorial Office ‘Hormone Research in Pediatrics’
P.O. Box
CH–4009 Basel (Switzerland)
Tel. +41 61 306 1437
Fax +41 61 306 1434

They should be accompanied by a signed copyright transfer statement (please see submission website).

The names and addresses of four experts in the appropriate area of research should accompany each manuscript. Selected scientist(s) will be invited to act as referee(s).

Main Sections
1. Original papers
   Any original papers on hormone research are accepted; we particularly welcome papers on developmental and clinical research.

2. Mini reviews
   Most mini reviews are submitted upon invitation. However, the editors are open to unsolicited mini reviews. Authors planning such a mini review are requested to contact the Editorial Office with an outline of the intended mini review. All mini reviews are subject to peer review. The guidelines for the mini reviews can be found at www.karger.com/hrp_guidelines#11.

3. Novel insights from clinical practice
   We invite contributions to this section that provide novel insight into a clinical problem. We recognise the value of case reports and thus submissions can be presented in a case or a number of similar cases. The most important aspect of the presentation is that it should provide a new perspective on a recognised clinical scenario or may represent an entirely new clinical condition. The novel aspects of the case(s) may be in the phenotype, the presentation, the investigation and/or the management. Manuscripts revealing novel mechanisms are of particular interest. Papers repeating known phenotypes or mutations in a novel context are not acceptable.

   We propose that a highlighted box containing one or two bullet points on ‘Established facts’ and ‘Novel insights’ be placed on the first page of the report. This reinforces the novelty of the clinical observation. The manuscript should be presented with an abstract (up to 200 words), brief introduction, case or case series description and results, followed by a discussion. No limits on length or number of references are imposed. Statements for the highlighted box should also be included.

Conditions
All manuscripts are subject to editorial review. The names and addresses of six experts in the appropriate area of research should accompany each manuscript. Selected scientist(s) will be invited to act as referee(s).

Manuscripts are received with the explicit understanding that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the permanent property of Hormone Research in Pediatrics and may not be reproduced by any means, in whole or in part, without the written consent of the publisher.

It is the author’s responsibility to obtain permission to reproduce illustrations, tables, etc. from other publications.

Arrangement
Title page: The first page of each paper should indicate the title, the authors’ names, the institute where the work was conducted, and a short title for use as a running head.

Full address: The exact postal address of the corresponding author complete with postal code must be given at the bottom of the title page. Please also supply phone and fax numbers, as well as e-mail address.

Key words: Please supply 3–10 key words in English that reflect the content of the paper.

Abstract: Each paper needs an abstract of up to 200 words. It should be structured as follows:
Background/Atmos: What is the major problem that prompted the study?
Methods: How was the study done?
Results: Most important findings?
Conclusion: Most important conclusion?

Footnotes: Avoid footnotes. When essential, they are numbered consecutively and typed at the foot of the appropriate page.

Tables and illustrations: Tables and illustrations (both numbered in Arabic numerals) should be prepared on separate pages. Tables require a heading and figures a legend, also prepared on a separate page. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations on one block for reproduction (max. size 180 × 223 mm) or provide crop marks.

Color illustrations
Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are reproduced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 960.00 per page.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize; number references in the order in which they are first mentioned in the text. The surname of the authors followed by initials should be given.

Guidelines for Authors

There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org).

Examples
(b) Papers published only with DOI numbers: Theoharides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mastocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063858.

Self-Archiving/Green Open Access
Karger permits authors to archive their pre-prints (i.e. pre-peer review) or post-prints (i.e. accepted manuscript after peer review but before production) on their own or institutional website.

In addition, authors may post their accepted manuscripts in public Open Access repositories and scientific networks (e.g. ResearchGate or Mendeley) no earlier than 12 months following publication of the final version of their article. For all self-archiving, the posted manuscripts must:
HORMONE RESEARCH IN PÆDIATRICS

• Be used for noncommercial purposes only
• Be linked to the final version on www.karger.com
• Include the following statement:
  'This is the peer-reviewed but unedited manuscript version of the following article: [insert full citation, e.g. Cytogenet Genome Res 2014;142:227–238 (DOI: 10.1159/000361001)]. The final, published version is available at http://www.karger.com/?doi=[insert DOI number].

It is the author’s responsibility to fulfill these requirements.

For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article.

Manuscripts to be archived in PubMed Central due to funding requirements will be submitted by Karger on the author’s behalf [see Funding Organizations (NIH etc.)].

For self-archiving Author’s Choice™ (Gold Open Access) articles, see Author’s Choice™.

Author’s Choice™
Karger’s Author’s Choice™ service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.karger.com. The option is available for a one-time fee of CHF 3,000.00, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

The final, published version of the article may be posted at any time and in any repository or on other websites, in accordance with the relevant Creative Commons license. Reposted Open Access articles must:
• Follow the terms of the relevant Creative Commons license
• Be linked to the final version on www.karger.com
• Include the following statement:
  'The final, published version of this article is available at http://www.karger.com/?doi=[insert DOI number].'

It is the author’s responsibility to fulfill these requirements.

For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article.

Funding Organizations (NIH etc.)
The U.S. National Institutes of Health (NIH) Public Access Policy mandates that accepted, peer-reviewed manuscripts are archived in its digital database, PubMed Central (PMC), within 12 months of the official publication date. As a service to authors, Karger submits NIH-funded articles to PMC on behalf of the authors immediately upon publication. The NIH assigns a PMCID within approximately 1 month and the manuscript will appear in PMC after a 12-month embargo. For authors making their paper Open Access through Author’s Choice™, the embargo will be overridden, thereby accelerating the accessibility of the article. Karger also complies with other funders’ requirements (including Wellcome Trust and RCUK) for submission to PMC. Authors should include information on their grants in the Acknowledgements section of their papers.

Page Charges
There is no page charge for papers of 4 or fewer printed pages (including tables, illustrations and references). Each additional complete or partial page is charged to the author at CHF 650.00. The allotted size of a paper is equal to approx. 12 manuscript pages (including tables, illustrations and references). As the page charges are waived in any case for the first paper each year to be published by a member of ESPE or PES, authors who are members of the ESPE or PES should so indicate on the title page.

Proofs
Unless indicated otherwise, a PDF for correction is sent to the corresponding author and should be returned with the least possible delay. Alterations other than the correction of printer’s errors are charged to the author.

E-pub First
All articles are published electronically ahead of print with a DOI number and are supplemented later with the definite reference of the printed version. The articles become available immediately after the authors’ approval to publication, with the added advantage of being citable much earlier than in print. Authors can influence the time of appearance by promptly returning the proofs.

Reprints
Order form and price list is sent with the PDF. Orders submitted after the issue is printed are subject to considerably higher prices.

For over 40 years the Karger Gazette has been distributed to a growing audience worldwide. Published in newspaper format, it highlights advances in biomedicine and clinical practice, introduces personalities, portrays research institutes and chronicles milestones in the history of Karger Publishers in a lively and readable style.

The new anniversary issue celebrates Karger’s 125 years as a medical publisher. It explores the STM publishing business in the digital age, offers short portraits of Karger’s journal and book series editors, and includes interviews with three renowned scientists who talk about their careers and how they define progress.

Recent discoveries in experimental and clinical research have led to impressive advances in our knowledge of the genetic and environmental mechanisms governing sex determination and differentiation, their evolution as well as the mutations or endocrine and metabolic abnormalities that interfere with normal gonadal development. Sexual Development provides a unique forum for this rapidly expanding field. Its broad scope covers all aspects of genetics, molecular biology, embryology, endocrinology, evolution and pathology of sex determination and differentiation in humans and animals. It publishes high-quality original research manuscripts, review articles, short reports, case reports and commentaries. An internationally renowned and multidisciplinary editorial team of three chief editors, ten prominent scientists serving as section editors, and a distinguished panel of editorial board members ensures fast and author-friendly editorial processing and peer reviewing.

Selected contributions

- Characteristic Features of Reproductive Hormone Profiles in Late Adolescent and Adult Females with Complete Androgen Insensitivity Syndrome: Doehnert, U. (Lübeck); Bertelloni, S. (Pisa); Werner, R. (Lübeck); Dati, E. (Pisa); Hiort, O. (Lübeck)
- Promoter-Dependent Activity on Androgen Receptor N-Terminal Domain Mutations in Androgen Insensitivity Syndrome: Tadokoro-Cuccaro, R.; Davies, J. (Cambridge); Mongan, N.P. (Nottingham); Bunch, T. (Cambridge); Brown, R.S. (Boston, Mass.); Audi, L. (Barcelona); Watt, K.; McEwan, I.J. (Aberdeen); Hughes, I.A. (Cambridge)
- Temperature-Dependent Sex Determination Ruled Out in the Chinese Soft-Shelled Turtle (Pelodiscus sinensis) via Molecular Cytogenetics and Incubation Experiments across Populations: Mu, Y. (Beijing); Zhao, B. (Hangzhou); Tang, W.-Q.; Sun, B.; Zeng, Z.-G. (Beijing); Valenzuela, N. (Ames, Iowa); Du, W.-G. (Beijing)
- Development of Avian External Genitalia: Interspecific Differences and Sexual Differentiation of the Male and Female Phallus: Herrera, A.M. (Gainesville, Fla.); Brennan, P.L.R. (Amherst, Mass.); Cohn, M.J. (Gainesville, Fla.)
- Anatomical and Molecular Analyses of XY Ovaries from the African Pygmy Mouse Mus minutoides: Rahmoun, M.; Perez, J.; Saunders, P.A.; Boizet-Bonhoure, B. (Montpellier); Wilhelm, D. (Clayton, Vic.); Poulat, F.; Veyrunes, F. (Montpellier)
