Introducing the new interdisciplinary
Karger journal

*Biomedicine Hub* is an interdisciplinary journal: a ‘hub’ for researchers, clinicians and public health professionals across biomedical disciplines to share research findings, ideas, theories, experimental results and clinical experience. *Biomedicine Hub* aims at facilitating the exchange of knowledge between disciplines, with a focus on translational science for the development of cutting-edge technologies and the improvement of health care. A further focus is on emerging interdisciplinary fields at the forefront of medicine.

Contents
Aims and Scope
Imparting the most current information to physicians caring for patients with intestinal diseases, this journal seeks to identify the basic pathophysiological mechanisms common to different inflammatory intestinal diseases, to compare the environmental conditions involved in their pathogenesis, and to provide important insights into their therapies. Inflammatory Intestinal Diseases thus reduces the gap between clinical and basic sciences as well as between hepatology and inflammatory diseases of the intestinal tract such as inflammatory bowel diseases, celiac disease and irritable bowel syndrome. Inflammatory Intestinal Diseases also aims to improve the exchange of knowledge between researchers from Eastern and Western countries, which is reflected in the composition of the Editorial Board. Special articles are prepared by two authors, one from East and one from West, which compare genetic, epidemiology, diagnostic methods, and treatment options of a disease. Apart from publishing original basic research articles, the journal also accepts randomized controlled clinical trials, observational studies, and cost-effectiveness analyses as well as commentary type and systematic reviews and consensus statements.

Submission
The Journal accepts invited Review Articles.

Invited Reviews
Invited Review Articles provide expert overviews of the latest clinical data and therapeutic regimens.

Conflict of Interest
All manuscripts must be accompanied by a cover letter. Assurance should be given in the cover letter that the manuscript is not under simultaneous consideration by any other publication.

Disclosures
Authors are required to disclose any sponsorship or funding arrangements relating to their research and all authors should disclose any possible conflicts of interest. Disclosure statements will be published at the end of the article.

Plagiarism Policy
Whether intentional or not, plagiarism is a serious violation. We define plagiarism as a case in which a paper reproduces another work with at least 25% similarity and without citation. If evidence of plagiarism is found before/after acceptance or after publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retraced and the author sanctioned from publishing papers for a period to be determined by the responsible Editor(s).

Arrangement
The manuscript should conform to the following order: title page, abstract and key words, body, acknowledgment, references, figure legends, tables and figures. Manuscripts should be written in high-quality English suitable for effective communication to a professional medical audience. For authors whose native language is not English, use of a professional language editing service (http://www.karger.com/Resources/Authors) prior to submission can help to avoid delays with the review process. All pages, including the figure legends, should be numbered in sequence, and the first author's name should appear at the upper right corner of each page. Papers not conforming to the journal style will be returned without review.

Title page
The first page of each paper should indicate a concise title of no more than 150 characters, all authors' names (first name and surname), authors' institutional affiliations, and a short title for use as running head.

Corresponding author: The exact postal address of author(s) to whom correspondence, proofs, and reprint requests should be sent, including the postal code, must be given at the bottom of the title page. Please also supply phone number and e-mail address.

Abstract of Review Articles: Should be divided into the following subsections: Background, Summary and Key Messages. The Background should provide a brief clinical context for the review and is followed by the Summary, which should include a concise description of the main topics covered in the text. The Key Messages encapsulate the main conclusions of the review. Submit the abstract on a separate page. The abstract should be less than 300 words.

Footnotes: Avoid footnotes.

Tables and illustrations: Tables and illustrations (both numbered in sequential Arabic numerals) should be prepared as separate files. Tables require a brief and concise heading. Figures require a legend, prepared as a separate page, after references. Please use scale markers for electron micrographs, and indicate the type of stain used. For the reproduction of illustrations, only good drawings and original photographs can be accepted; negatives or photocopies cannot be used. Due to technical reasons, figures with a screen background should not be submitted. When possible, group several illustrations in one block for reproduction (max. size 220 × 220 mm) or provide crop marks. Electronically submitted b/w half-tone and color illustrations must have a final resolution of 300 dpi after scaling, line drawings one of 800–1200 dpi.

References: In the text identify references by Arabic numerals [in square brackets]. Material submitted for publication but not yet accepted should be noted as [unpublished data] and not be included in the reference list. The list of references should include only those publications which are cited in the text. Do not alphabetize number references in the order in which they are first mentioned in the text. The surnames of the authors followed by initials should be given. There should be no punctuation other than a comma to separate the authors. Preferably, please cite all authors. Abbreviate journal names according to the Index Medicus system. Also see International Committee of Medical Journal Editors: Uniform requirements for manuscripts submitted to biomedical journals (www.icmje.org).

Anti-Tumor Necrosis Factor Therapy in Inflammatory Bowel Disease

Editors
Gerhard Rogler
Hans Herfarth
Toshifumi Hibi
Ole Haagen Nielsen

The introduction of anti-tumor necrosis factor (TNF) antibodies into the treatment of patients with IBD about fifteen years ago has dramatically improved the quality of life for patients with severe Crohn's disease and ulcerative colitis. But despite the fact that this therapeutic approach has been around for quite some time, there has been no comprehensive overview to date. The book at hand aims to amend this shortcoming, presenting for the first time a thorough overview on TNF action, mechanisms of anti-TNF therapy, treatment strategies, side effects, monitoring, biosimilars and related issues. Including state-of-the-art information and research results, this publication will be a valuable source of information and guide clinicians to the optimal treatment decision, improving the quality of life of patients with IBD. Moreover, rheumatologists or even dermatologists might also find this book of interest.

Contents

- Preface: Rogler, G. et al.
- Physiological Role of TNF in Mucosal Immunology
  - The Effect of TNF-α on the Regulation of Epithelial Function in IBD: Tsuchiya, K.
  - Physiological Role of TNF in Mucosal Immunology: Regulation of Macrophage/Dendritic Cell Function: Rivollier, A. et al.
  - Physiological Role of TNF in Mucosal Immunology: Regulation of T-Cell Function: Scharl, M.
- Pathophysiological Role of TNF in IBD
  - Pathophysiological Role of TNF in IBD: TNF and Its Impact on Barrier Function: Schumann, M.; Kühnel, A.
  - Pathophysiological Role of TNF in IBD: TNF and Its Effect on Innate Immune Defense: Scharl, M.
  - TNF and Its Impact on Adaptive Immune Mechanisms and Chronic Inflammation: Siegmund, B.
- Mechanism of Action of Anti-TNF Antibodies
  - Binding of Membrane-Bound TNF: Aitaya, R. et al.
  - Apoptosis of T Cells and Monocytes: Kucharczyk, T.
  - Neutralisation of Soluble TNF: Dreessen, E.; Gils, A.
- General Treatment Considerations
  - Recommended Screening Procedures before Treatment with Anti-TNF Agents: Maaser, C.
  - The Risk of Formation of Neutralising Antibodies: Clark, J.; Sakuraba, A.
  - TNF Antagonist Trough Concentrations and Treatment Efficacy in IBD: Vande Casteele, N.

Biosimilars

- What is a Biosimilar? Neri, D.
- Is Extrapolation of Safety and Efficacy Data Possible? Ainsworth, M.
- Potential Concerns and Questions: Rogler, G.

Side Effects of Anti-TNF Therapy

- Psoriasis-Like Lesions and Skin Reactions: Herfarth, H.H. et al.
- The Elicitation of Rheumatic Symptoms at Vascular Sites: Geyer, M.; Müller-Ladner, U.
- Serum Reaction, Lupus-Like Syndrome: Schnitzler, F.

Risks of Anti-TNF Therapy

- Risk of Non-Hematologic Malignancy with Anti-TNF Therapy in IBD: Jain, A. et al.
- Risk of Lymphoma: Nagahori, M.; Watanabe, M.
- Risk of Serious Infection: Naganuma, M.
- Risk of Post-Operative Infections with Anti-TNF Therapy: Cohen, B.L.

Anti-TNF Therapy in Crohn’s Disease

- Predictor of Treatment Response: Tanaka, H.; Motoya, S.
- Step-Up or Top-Down, Combination with Immunosuppression or Not? Barthel, C.; Stange, E.F.

Anti-TNF Therapy in Ulcerative Colitis

- The ‘Ideal’ Anti-TNF Patient: Indications for Anti-TNF Therapy in Ulcerative Colitis: Hisamatsu, T.
- Predictors of the Treatment Response: Kim, H.J.
- What Is the Right Dosage? Michetti, P.

Anti-TNF Therapy in Special IBD Situations

- Fistulising and Stricture Crohn’s Disease: Schoepfer, A.M.
- Postoperative Anti-TNF Therapy in the Management of Crohn’s Disease: Barrie, A.; Regueiro, M.
- Anti-TNF-α Therapy for Extraintestinal Manifestations of IBD: Nielsen, O.H. et al.
- Anti-TNF Therapy in Special Situations of the Patient
  - Anti-TNF Alpha Agents and Breastfeeding: Al-Sum, H.; Maxwell, C.V.

When and How to Stop Anti-TNF Treatment in IBD

- When and How to Stop Anti-TNF Treatment in Inflammatory Bowel Disease: Predictors of Relapse after Stopping Treatment: Louis, E.
- Treatment Options after Anti-TNF Failure: Kobayashi, T.

Medical Statistics has never been easier!

David E. Matthews
Vernon T. Farewell

Using and Understanding Medical Statistics
5th, revised and extended edition

The fifth revised edition of this highly successful book presents the most extensive enhancement since Using and Understanding Medical Statistics was first published 30 years ago. Without question, the single greatest change has been the inclusion of source code, together with selected output, for the award-winning, open-source, statistical package known as R. This innovation has enabled the authors to de-emphasize formulae and calculations, and let software do all of the ‘heavy lifting’.

This edition also introduces readers to several graphical statistical tools, such as Q-Q plots to check normality, residual plots for multiple regression models, funnel plots to detect publication bias in a meta-analysis and Bland-Altman plots for assessing agreement in clinical measurements. New examples that better serve the expository goals have been added to a half-dozen chapters. In addition, there are new sections describing exact confidence bands for the Kaplan-Meier estimator, as well as negative binomial and zero-inflated Poisson regression models for over-dispersed count data.

The end result is not only an excellent introduction to medical statistics, but also an invaluable reference for every discerning reader of medical research literature.

Contents
Preface to the Fifth Edition
Prefaces to the Previous Editions
• Basic Concepts
• Tests of Significance
• Fisher’s Test for 2 × 2 Contingency Tables
• Approximate Significance Tests for Contingency Tables
• Some Warnings concerning 2 × 2 Tables
• Kaplan-Meier or ‘Actuarial’ Survival Curves
• The Log-Rank or Mantel-Haenszel Test for Comparing Survival Curves
• An Introduction to the Normal Distribution
• Analyzing Normally Distributed Data
• Linear Regression Models for Medical Data
• Binary Logistic Regression
• Regression Models for Count Data
• Proportional Hazards Regression
• The Analysis of Longitudinal Data
• Analysis of Variance
• Data Analysis
• The Question of Sample Size
• The Design of Clinical Trials
• Further Comments regarding Clinical Trials
• Meta-Analysis
• Epidemiological Applications
• Diagnostic Tests
• Agreement and Reliability

Digestion concentrates on clinical research reports: in addition to editorials and reviews, the journal features sections on Stomach/Esophagus, Bowel, Neuro-Gastroenterology, Liver/Bile, Pancreas, Metabolism/Nutrition and Gastrointestinal Oncology. Papers cover physiology in humans, metabolic studies and clinical work on the etiology, diagnosis, and therapy of human diseases. It is thus especially cut out for gastroenterologists employed in hospitals and outpatient units. Moreover, the journal’s coverage of studies on the metabolism and effects of therapeutic drugs carries considerable value for clinicians and investigators beyond the immediate field of gastroenterology.
