Erosive tooth wear is a multifactorial condition of growing concern to the clinician and the subject of extensive research. Since the publication of the first edition of the book with the title Dental Erosion, new knowledge for a better understanding of this important subject has been gathered. The new and more detailed insights resulted in this second, extended publication. It presents a broad spectrum of views, from the molecular level to behavioural aspects, as well as trends in society. In particular, the issues concerning chemical and biological factors as well as dental erosion in children are discussed more extensively in this second edition. The first chapters include topics such as the definition, diagnosis, interaction, epidemiology and histopathology of tooth wear. Further, the aetiology of dental erosion, including nutritional and patient-related factors, and dental erosion in children are discussed.

This book is a valuable and indispensable guide to better oral health and is highly recommended to faculty members, researchers, dental students, practitioners and other dental professionals.

Contents

A unique guide to improved oral health

Erosive Tooth Wear
From Diagnosis to Therapy

2nd, revised and extended edition of
'Dental Erosion – From Diagnosis to Therapy', Vol. 20
Editors: Lussi, A. (Bern); Ganss, C. (Giessen)
USD price for North America and Asia, EUR price for Europe, CHF price for Switzerland
Order through a Karger distributor, directly with the publisher
Orders may be placed with any bookshop, subscription agency, directly with the publisher or through a Karger distributor.

The easiest way to order: www.karger.com/moors

Erosive Tooth Wear: A Phenomenon of Clinical Significance

Erosive Tooth Wear: A Multifactorial Condition of Growing Concern and Increasing Knowledge: Lussi, A.; Carvalho, T.S.
Is Erosive Tooth Wear an Oral Disease?: Ganss, C.
Diagnosis of Erosive Tooth Wear: Ganss, C.; Lussi, A.
The Interactions between Attrition, Abrasion and Erosion in Tooth Wear: Shellis, R.P.; Addy, M.

Epidemiology

Challenges in Assessing Erosive Tooth Wear: Margaritis, V.; Nunn, J.
Prevalence, Incidence and Distribution of Erosion: Jaeggi, T.; Lussi, A.
Prevalence of Erosive Tooth Wear in Risk Groups: Schlueter, N.; Tveit, A.B.

The Histopathology of Dental Erosion

The Histological Features and Physical Properties of Eroded Dental Hard Tissues: Ganss, C.; Lussi, A.; Schlueter, N.
Dentine Hypersensitivity: West, N.; Seong, J.; Davies, M.
Methods for Assessment of Dental Erosion: Attin, T.; Wegehaupt, F.J.

Aetiology of Dental Erosion: Nutritional Factors

Erosion in Relation to Nutrition and the Environment: Barbour, M.E.; Lussi, A.
Oral Hygiene Products, Medications and Drugs – Hidden Aetiological Factors for Dental Erosion: Hellwig, E.; Lussi, A.
Understanding the Chemistry of Dental Erosion: Shellis, R.P.; Featherstone, J.D.B.; Lussi, A.

Aetiology of Dental Erosion: Patient-Related Factors

Intrinsic Causes of Erosion: Moazzez, R.; Bartlett, D.
The Potential of Saliva in Protecting against Dental Erosion: Hara, A.T.; Zero, D.T.
The Pellicle and Erosion: Hannig, M.; Hannig, C.
The Role of Oral Hygiene: Does Toothbrushing Harm?: Wiegand, A.; Schlueter, N.

Preventive and Restorative Therapy

Risk Assessment and Causal Preventive Measures: Lussi, A.; Hellwig, E.
The Role of Fluoride in Erosion Therapy: Huysmans, M.-C.; Young, A.; Ganss, C.
Alternatives to Fluoride in the Prevention and Treatment of Dental Erosion: Buzalaf, M.A.R.; Magalhães, A.C.; Wiegand, A.

Dental Erosion in Children

ORCA Website
http://www.orca-caries-research.org
Caries Research

Aims and Scope
Caries Research is an international journal, the aim of which is to promote research in dental caries and related fields through the publication of original research and the critical evaluation of research findings. The journal will publish papers on the etiology, pathogenesis, prevention and clinical control or management of dental caries. Papers on health outcomes related to dental caries are also of interest, as are papers on other disorders of dental hard tissues, such as dental erosion. Aspects of caries beyond the stage where the pulp ceases to be vital are outside the scope of the journal. The journal reviews papers dealing with natural products and other bacterial inhibitors that meet specific criteria, details of which are available from the Editor.

Submission
Only manuscripts written in English are considered and should be submitted using the online submission website: www.karger.com. During the online submission you will be asked to list complete mailing addresses, including e-mail addresses of three potential reviewers for your manuscript. Copies of any "in press" papers cited in the manuscript must accompany the submission. Manuscripts reporting on clinical trials must be accompanied by the CONSORT checklist (see below).

Plagiarism Policy
Whether intentional or not, plagiarism is always a serious violation. We would regard any paper that reproduces another work with at least 25% similarity and without citation as a case that meets our definition of plagiarism. If any evidence of plagiarism is found before/after acceptance, or during the publication of the paper, the author will be offered a chance for rebuttal. If the arguments are not found to be satisfactory, the manuscript will be retracted and the author sanctioned from publishing papers for a period to be determined by the responsible Editor(s).

Conditions
All manuscripts are subject to editorial review. Manuscripts are reviewed with the explicit understanding that the data they contain have not previously been published (in any language) and that they are not under simultaneous consideration by any other publication. Submission of an article for publication implies the transfer of the copyright from the author to the publisher upon acceptance. Accepted papers become the property of Caries Research and may not be reproduced by any means, in whole or in part, without the written consent of the publisher. It is the authors’ responsibility to obtain permission to reproduce illustrations, tables, etc., from other publications. Authors of papers describing research on human subjects are required to state that they have adhered to the Declaration of Helsinki.

Types of Papers
Original papers or Short Communications are reports of original work (including systematic reviews and meta-analyses). Both have the structure outlined below but for Short Communications the abstract should be less than 100 words and the manuscript should not exceed 3 printed pages, equivalent to about 9 manuscript pages (including tables, illustrations and references). Reviews can have a freer format but should nevertheless commence with a title page, an Abstract and an Introduction defining the scope. Reviews are not subject to page charges. Current Topics are concise articles that present current discussions of a topic of current interest, or a fresh look at a problem, and should aim to stimulate discussion.

Letters to the Editor
COMMENTARY: Letters to the Editor, commenting on recent papers in the journal, are published occasionally, together with a response from the authors of the paper concerned.

Preparation of Manuscripts
One and a half line spacing with wide margins should be used throughout the text. All pages and all lines must be numbered, starting from the title page. A conventional font, such as Times New Roman or Arial, should be used, with a font size of 11 or 12. Avoid using italics except for Linnaean names of organisms and names of genes.

Introduction: The section should provide a concise summary of the background to the relevant field of research, introduce the specific problem addressed by the study and state the hypothesis to be tested.

Discussion: This section should provide a concise summary of the background to the relevant field of research, introduce the specific problem addressed by the study and state the hypothesis to be tested.

Materials and Methods (or Subjects and Methods): All relevant attributes of the material (e.g., tissue, patients or population sample) forming the subject of the research should be provided. Experimental, analytical and statistical methods should be described concisely but include enough detail for others to be able to repeat the work.

The name and brief address details of the manufacturer or supplier of major equipment should be given. Statistical methods should be described in enough detail to enable a knowledgeable reader to assess the relevance to original data to verify the results reported. When possible, findings should be quantified and appropriate measures of error or uncertainty (such as confidence intervals) indicated. Sole reliance on statistical hypothesis testing, such as the use of p values, should be avoided. Details about eligibility criteria for the subjects, the randomization and the number of observations should be included. The computer software and the statistical methods used should be specified (see Lang and Altman: Basic Statistical Reporting for Articles Published in Biomedical Journals: The "Strengthening the Reporting of Observational Studies in Epidemiology"

Guidelines for Authors

Guidelines for Authors

 Contains a free text format but should nevertheless commence with a title page, an Abstract and an Introduction defining the scope. Reviews are not subject to page charges. Current Topics are concise articles that present current discussions of a topic of current interest, or a fresh look at a problem, and should aim to stimulate discussion.

Letters to the Editor
COMMENTARY: Letters to the Editor, commenting on recent papers in the journal, are published occasionally, together with a response from the authors of the paper concerned.

Preparation of Manuscripts
One and a half line spacing with wide margins should be used throughout the text. All pages and all lines must be numbered, starting from the title page. A conventional font, such as Times New Roman or Arial, should be used, with a font size of 11 or 12. Avoid using italics except for Linnaean names of organisms and names of genes.

Introduction: The section should provide a concise summary of the background to the relevant field of research, introduce the specific problem addressed by the study and state the hypothesis to be tested.

Discussion: This section should provide a concise summary of the background to the relevant field of research, introduce the specific problem addressed by the study and state the hypothesis to be tested.

Materials and Methods (or Subjects and Methods): All relevant attributes of the material (e.g., tissue, patients or population sample) forming the subject of the research should be provided. Experimental, analytical and statistical methods should be described concisely but include enough detail for others to be able to repeat the work.

The name and brief address details of the manufacturer or supplier of major equipment should be given. Statistical methods should be described in enough detail to enable a knowledgeable reader to assess the relevance to original data to verify the results reported. When possible, findings should be quantified and appropriate measures of error or uncertainty (such as confidence intervals) indicated. Sole reliance on statistical hypothesis testing, such as the use of p values, should be avoided. Details about eligibility criteria for the subjects, the randomization and the number of observations should be included. The computer software and the statistical methods used should be specified (see Lang and Altman: Basic Statistical Reporting for Articles Published in Biomedical Journals: The "Strengthening the Reporting of Observational Studies in Epidemiology" or the "SAMPL Guidelines": http://www.equator-network.org/wp-content/uploads/2013/07/SAMPL-Guidelines-6-27-13.pdf). Manuscripts reporting studies on human subjects should include evidence that the research was conducted ethically and in accordance with the Declaration of Helsinki (World Medical Association). In particular, there must be a statement in the Materials and Methods section that the consent of an appropriate ethical committee had been obtained prior to the start of the study, and that the subjects were volunteers who had given written informed consent. Information detailing the power and sample size calculations must be included in the manuscript. Randomized clinical trials should be reported according to the standardized protocol of the CONSORT Statement. The CONSORT checklist must be submitted together with all papers reporting observational studies in epidemiology. Reports on systematic reviews and meta-analyses should be structured to comply with the Preferred Reporting Items for Systematic Reviews and Meta-Analyses: The PRISMA Statement (http://www.prisma-statement.org/statement.htm). A PRISMA checklist must be submitted together with all papers reporting systematic reviews and meta-analyses. The reporting of diagnostic accuracy studies should be carried out according to the criteria described in the STARD Statement (http://www.stard-statement.org/). The STARD checklist must be submitted together with all papers reporting investigations which include clinical and/or laboratory measurements.

Randomized clinical trials must be registered at clinicaltrials.gov or a similar national authority and the trial number must be included in the manuscript. When submitting a paper on a clinical trial, the trial registration number should be stated at the end of the abstract using the following format: trial registration (name of the trial registry, the registry URL and the trial registration number).

In studies on laboratory animals, the experimental procedures should conform to the principles laid down in the European Convention for the Protection of Vertebrate Animals used for Experimental and other Scientific Purposes and/or the National Research Council Guide for the Care and Use of Laboratory Animals.

Unless the purpose of a paper is to compare specific systems or products, commercial names of clinical and scientific equipment or techniques should only be cited in the Materials and Methods or Acknowledgments sections when appropriate. Elsewhere in the manuscript generic terms should be used.
Caries Research

In any manuscript involving microradiography, the following information must be included: the radiation source and filters used and the kV used (this determines the wavelength of radiation and hence the validity of using Angmar's equation).

Manuscripts on experimental enamel caries should show that the lesions retain a relatively well-preserved surface layer, i.e. that they are not surface-softened lesions. Proof of surface integrity can be provided either as illustrations in the paper or as supplementary material for the reviewers. Transverse microradiography, polarized light microscopy of a section immersed in water or backscatter
tered scanning electron microscopy of a polished cross section can be used to provide the necessary proof. To allow the nature of experimental changes to be assessed, microradiographs or micrographs should be provided to show part of the experimental lesion and the adjacent control area as shown in figure 2 of Zaura et al.: Caries Res 2007;41:489-492. Again, these images can be provided as part of the paper or as supplementary material for re
view purposes.

Results: Results should be presented without interpreta
tion. Identical data should not be presented in both the tables and the figures. The text should not repeat numeri
cal data provided in the tables or the figures but should indicate the most important results and describe relevant trends and patterns.

Discussion: This section has the function of describing the limitations of the material or the methods, of inter
terpreting the data and of drawing inferences about the contribution of the study to the wider field of research. There should be no repetition of the preceding sections, e.g. reiteration of results or the aim of the research. The discussion should end with a few sentences summarizing the conclusions of the study. However, there should not be a separate Conclusions section.

Acknowledgements: The contribution of colleagues (for technical assistance, statistical advice, critical com
ment etc.) should be acknowledged and the position(s) of author(s) employed by commercial firms should be provided. This section should describe the source(s) of funding that have supported the work and should mention any relevant grant numbers. Please also include this sentence: "The funders had no role in the study design, the data collection and the analysis, decision to publish, or the preparation of the manuscript." If this statement is not correct, you must describe the role of any sponsors or funders, and amend the sentence as needed. Additionally, the roles of all authors must be described. (For example: Performed the clinical examinations: AA, CC. Performed the experiments: DD, FF. Analyzed the data: BB, FF. Wrote the paper: AA, CC, FF, EE.)

Legends: The table headings should be listed first, fol
lowed by the legends for the illustrations.

Tables: Tables should be numbered in Arabic numerals. Each table should be placed on a separate page. Tables should not be constructed using tabs but should instead be compiled with the help of the table function of the word-processing software.

Illustrations:

- Illustrations should be numbered in Arabic numerals in the sequence of citation. Figure numbers must be clearly visible on the figures themselves, outside the image area.
- Black and white half-tone illustrations must have a fi
nal resolution of 300 dpi after scaling and line drawings should have a final resolution of 800–1,200 dpi.
- Figures with a screen background should not be sub
mitted.
- Whenever possible, group several illustrations in a sin
gle block for reproduction (max. size 180 × 223 mm).

Color Illustrations

Online edition: Color illustrations are reproduced free of charge. In the print version, the illustrations are repro
duced in black and white. Please avoid referring to the colors in the text and figure legends.

Print edition: Up to 6 color illustrations per page can be integrated within the text at CHF 960.00 per page.

References

Reference to other publications should give due acknowledg
dgement to previous work, provide the reader with ac
ncrete information on and up-to-date guidance in the field of research under discussion, and it should also provide evidence to support the line of the arguments presented. Authors should select references carefully to fulfill these aims without attempting to be comprehensive. Cited work should already have been published or of
officially accepted for publication. Material submitted for publication but not yet accepted should be cited as 'unpublished results', while unpublished observations com
communicated to the authors by any other author should be cited as 'personal communication', with credit in both cases being given to the source of the information. Nei
ther unpublished nor personally communicated material should be included in the list of references. Abstracts that are more than 2 old years and theses should not be cited without a good reason, which should be explained in the covering letter accompanying the paper.

References should be cited by naming the author(s) and the year. Where references are cited in square brackets, both names and date should be enclosed in square brackets. Where the authors are the subject or object of the sentence, only the year is enclosed in square brackets.

One author: [Frostell, 1984] or Frostell [1984].

Two authors: [Davies and ten Cat, 1990] or Davies and ten Cat [1990].

More than two authors: [Trahan et al., 1985] or Trahan et al. [1985].

When several references are cited in square brackets, these should be in date order and separated by semico
ons: [Frostell, 1984; Trahan et al., 1985; Davies and ten Cat, 1990].

Material published on the World Wide Web should be cited in the same way as a reference to a print publication, and the URL should be included in the reference list (not in the text), together with the year when it was accessed. The reference list should include all the publications cited in the text, but no other publications. References, format
ted as in the examples below, should be arranged in strict alphabetical order. All authors should be listed. For pa
pers by the same authors, references should be listed ac
cording to the year. Papers published by the same authors in the same year should be distinguished by adding the letters a, b, etc., immediately following the year, in both the text citation and the reference list. For abbreviating the names of journals, use the Index Medicus system. For jour
nals, provide only the year, the volume number, and the page numbers.

Examples:

(b) Papers published only with DOI numbers: Theo
harides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mas
tocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063858.

References should be cited by naming the author(s) and the year. Where references are cited in square brackets, both names and date should be enclosed in square brackets. Where the authors are the subject or object of the sentence, only the year is enclosed in square brackets.

One author: [Frostell, 1984] or Frostell [1984].

Two authors: [Davies and ten Cat, 1990] or Davies and ten Cat [1990].

More than two authors: [Trahan et al., 1985] or Trahan et al. [1985].

When several references are cited in square brackets, these should be in date order and separated by semico
ons: [Frostell, 1984; Trahan et al., 1985; Davies and ten Cat, 1990].

Material published on the World Wide Web should be cited in the same way as a reference to a print publication, and the URL should be included in the reference list (not in the text), together with the year when it was accessed. The reference list should include all the publications cited in the text, but no other publications. References, format
ted as in the examples below, should be arranged in strict alphabetical order. All authors should be listed. For pa
pers by the same authors, references should be listed ac
cording to the year. Papers published by the same authors in the same year should be distinguished by adding the letters a, b, etc., immediately following the year, in both the text citation and the reference list. For abbreviating the names of journals, use the Index Medicus system. For jour
nals, provide only the year, the volume number, and the page numbers.

Examples:

(b) Papers published only with DOI numbers: Theo
harides TC, Boucher W, Spear K: Serum interleukin-6 reflects disease severity and osteoporosis in mas
tocytosis patients. Int Arch Allergy Immunol DOI: 10.1159/000063858.

Supplementary Material

Multimedia files and other supplementary files, directly relevant but not essential to the conclusions of a paper, enhance the online version of a publication and increase its visibility on the web. These files will undergo editor
torial review. The Editors reserve the right to limit the scope and length of the supplementary material. Multi
media and supplementary material should meet produc
tion quality standards for publication without the need for any modification or editing. Files should not exceed 10 MB in size. Figures and tables need to have titles and legends, and all files should be supplied separately and labeled clearly. All supplementary material should be re
ferred to in the main text. A DOI number will be assigned to supplementary material and it will be hosted online at https://karger.figshare.com under a CC BY license. Au
thors will be charged a processing fee of CHF 250.00 for supplementary material.

Digital Object Identifier (DOI)

Karger Publishers supports DOIs as unique identifiers for articles. A DOI number will be printed on the title page of each article. DOIs might in future be useful for identifying and citing articles published online without volume or issue information. More information can be found at www.doi.org

Self-Archiving/Green Open Access

Karger permits authors to archive their pre-prints (i.e. pre-peer review) or post-prints (i.e. accepted manuscript after peer review but before publication) on their per
sonal or their institution's internal website. In addition, authors may post their accepted manuscripts in public Open Access repositories and scientific networks (e.g. ResearchGate or Mendeley) no earlier than 12 months following publication of the final version of their article. For self-archiving, the posted manuscripts must:

- Be used for noncommercial purposes only
- Be linked to the final version on www.karger.com
- Include the following statement: “This is the peer-reviewed but unedited manuscript version of the following article: [insert full citation, e.g. Cyto-genet Genome Res 2014;142:227-238 (DOI: 10.1159/000361001)]. The final, published version is available at http://www.karger.com/doi-[insert DOI number].”
- It is the author's responsibility to fulfill these require
ments.
- For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article. Manuscripts to be archived in PubMed Central due to funding requirements will be submitted by Kar
ger on the author’s behalf [see Funding Organizations (NIH etc.)].
- For self-archiving Author's Choice™ (Gold Open Ac
cess) articles, see Author's Choice™.
Author’s Choice™
Karger’s Author’s Choice™ service broadens the reach of your article and gives all users worldwide free and full access for reading, downloading and printing at www.karger.com. The option is available for a one-time fee of CHF 3,000.00, which is a permissible cost in grant allocation. More information can be found at www.karger.com/authors_choice.

The final, published version of the article may be posted at any time and in any repository or on other websites, in accordance with the relevant Creative Commons license. Reposted Open Access articles must:
• Follow the terms of the relevant Creative Commons license
• Be linked to the final version on www.karger.com
• Include the following statement:
  “The final, published version of this article is available at http://www.karger.com/?doi=[insert DOI number].”

It is the author’s responsibility to fulfill these requirements.

For papers published online first with a DOI number only, full citation details must be added as soon as the paper is published in its final version. This is important to ensure that citations can be credited to the article.

Funding Organizations (NIH etc.)
The U.S. National Institutes of Health (NIH) Public Access Policy mandates that accepted, peer-reviewed manuscripts are archived in its digital database, PubMed Central (PMC), within 12 months of the official publication date. As a service to authors, Karger submits NIH-funded articles to PMC on behalf of the authors immediately upon publication. The NIH assigns a PMCID within approximately 1 month and the manuscript will appear in PMC after a 12-month embargo. For authors making their paper Open Access through Author’s Choice™, the embargo will be overridden, thereby accelerating the accessibility of the article. Karger also complies with other funders’ requirements (including Wellcome Trust and RCUK) for submission to PMC. Authors should include information on their grants in the Acknowledgements section of their papers.

Page Charges
There are no page charges for papers of seven or fewer printed pages (including tables, illustrations and references). A charge of CHF 650.00 will be levied for each page in excess of the allotted seven printed pages. The allotted size of a paper is equal to approximately 21 typescript pages (including tables, illustrations and references).

Proofs
Unless indicated otherwise, proofs are sent to the first-named author and should be returned with the least possible delay. Alterations other than the correction of printing errors are charged to the author. No page proofs are supplied to the author.

Reprints
Order forms and a price list are sent with the proofs. Orders submitted after an issue is printed are subject to considerably higher prices.

GOTTFRIED SCHATZ
A MATTER OF WONDER
What Biology Reveals about Us, Our World, and Our Dreams

Where do we come from? Is our destiny determined by the genes we inherit? In this book Gottfried Schatz, the world-renowned biochemist and co-discoverer of mitochondrial DNA, gives lucid – albeit often surprising – answers to universal questions and takes the reader on a fascinating journey of discovery across the boundaries of scientific disciplines. With passion and a keen sense of wonder he draws on philosophy, cultural history and art to formulate his reflections on the mysteries of life. These essays on key issues in the natural sciences will appeal not only to scientists but to all inquisitive minds, regardless of educational and professional background.

PLAN TO ATTEND

WCPD WORLD CONGRESS ON PREVENTIVE DENTISTRY

Integrating multifactorial approaches towards prevention of oral cancer, dental caries, periodontal disease and other oral diseases.

October 3-6, 2017
New Delhi, India

Presenter Pre-registration Deadline: August 4, 2017
Non-presenter Pre-registration Deadline: September 19, 2017

Organized by IADR with support of WHO Global Oral Health Programme and in collaboration with the WHO Collaboration Center for Oral Health Promotion at the Centre for Dental Education and Research, All India Institute of Medical Sciences, New Delhi and the Indian Division of the IADR.

www.iadr.org/wcpd
64th Congress of the European Organisation for Caries Research

ORCA

OSLO

5 - 8 July 2017 Norway

Early registration deadline 31 March
Regular registration deadline 20 May

Salivary Gland Neoplasms

Editors
Patrick J. Bradley
David W. Eisele

This volume in the book series ‘Advances in Oto-Rhino-Laryngology’ summarizes the current scientific knowledge of salivary gland neoplasms and illustrates recent advances in this clinical area. Chapters are authored by world renowned experts who cover the full breadth of salivary gland neoplasms, from benign to malignant, primary to secondary, and pediatric to adult. This comprehensive review highlights the outcome of treatments as well as the classification, diagnosis, and management of salivary gland neoplasms. It also includes a commentary on the future perspective necessary for improvement.

All clinicians, both surgical and non-surgical, involved in the diagnosis and treatment of patients with symptoms and diseases of the salivary gland, will find this book indispensable reading. It is also a beneficial educational resource for clinicians, students, and experts in the field.

Contents

Preface: Bradley, P.J.; Eisele, D.W.

- Classification of Salivary Gland Neoplasms: Bradley, P.J.
- Frequency and Histopathology by Site, Major Pathologies, Symptoms and Signs of Salivary Gland Neoplasms: Bradley, P.J.
- Molecular Pathology and Biomarkers: Ha, P.K.; Stenman, G.
- Evaluation: Imaging Studies: Kontzialis, M.; Glastonbury, C.M.; Aygun, N.
- Evaluation: Fine Needle Aspiration Cytology, Ultrasound-Guided Core Biopsy and Open Biopsy Techniques: Howlett, D.C.; Triantafyllou, A.
- Facial Nerve Monitoring: Guntinas-Lichius, O.; Eisele, D.W.
- Surgery for Benign Salivary Neoplasms: Gillespie, M.B.; Iro, H.
- Recurrent Benign Salivary Gland Neoplasms: Witt, R.L.; Nicolai, P.
- Prognostic Scoring for Malignant Salivary Gland Neoplasms: Vander Poorten V.; Guntinas-Lichius, O.
- Surgery for Primary Malignant Parotid Neoplasms: Deschler D.G.; Eisele, D.W.
- Metastatic Cancer to the Parotid: Clark, J.; Wang, S.
- Surgery for Malignant Submandibular Gland Neoplasms: Silver, N.L.; Chinn, S.B.; Bradley, P.J.; Weber, R.S.
- Surgery for Malignant Sublingual and Minor Salivary Gland Neoplasms: Bradley, P.J.; Ferris, R.L.
- Facial Reconstruction and Rehabilitation: Guntinas-Lichius, O.; Genther, D.J.; Byrne, P.J.
- Management of Regional Metastases of Malignant Salivary Gland Neoplasms: Medina, J.; Zbären, P.; Bradley, P.J.
- Indications for Salivary Gland Radiotherapy: Thomson, D.J.; Slevin, N.J.; Mendenhall, W.M.
- Chemotherapy and Targeted Therapy: Sen, M.; Prestwich, R.
- Management of Inoperable Malignant Neoplasms: Kiess, A.P.; Quon, H.
- Management of Recurrent Malignant Salivary Neoplasms: Merdad, M.; Richmond, J.D.; Quon, H.
- Salivary Gland Neoplasms in Children and Adolescents: Bradley, P.J.; Eisele, D.W.
- Distant Metastases and Palliative Care: Glazer, T.A.; Shuman, A.G.

Author Index / Subject Index

The easiest way to order: www.karger.com/adorl
179 Effect of 5,000 ppm Fluoride Dentifrice or 1,100 ppm Fluoride Dentifrice Combined with Acidulated Phosphate Fluoride on Caries Lesion Inhibition and Repair

188 Evidence of an in vitro Coupled Diffusion Mechanism of Lesion Formation within Microcosm Dental Plaque
Owens, G.J. (Liverpool); Lynch, R.J.M. (Liverpool/Weybridge); Hope, C.K.; Cooper, L.; Higham, S.M.; Valappil, S.P. (Liverpool)

198 Matching the Statistical Model to the Research Question for Dental Caries Indices with Many Zero Counts
Preisser, J.S. (Chapel Hill, NC); Long, D.L. (Birmingham, AL); Stamm, J.W. (Chapel Hill, NC)

209 Genetic Polymorphisms in DEFB1 and miRNA202 Are Involved in Salivary Human β-Defensin 1 Levels and Caries Experience in Children
Lips, A. (Niterói); Antunes, L.S. (Niterói/Nova Friburgo); Antunes, L.A. (Nova Friburgo); Abreu, J.G.B. (Niterói); Barreiros, D.; Oliveira, D.S.B. (Ribeirão Preto); Batista, A.C. (Niterói); Nelson-Filho, P.; Silva, L.A.B.; Silva, R.A.B. (Ribeirão Preto); Alves, G.G. (Niterói); Küchler, E.C. (Ribeirão Preto)

216 Postradiation Matrix Metalloproteinase-20 Expression and Its Impact on Dental Micromorphology and Radiation-Related Caries
Gomes-Silva, W.; Prado-Ribeiro, A.C.; Brandão, T.B. (Piracicaba/Sao Paulo); Morais-Faria, K.; de Castro Junior, G.; Mak, M.P. (Sao Paulo); Lopes, M.A.; Rocha, M.M. (Piracicaba); Salo, T.; Tjäderhane, L. (Oulu/Helsinki); de Goes, M.F. (Piracicaba); Santos-Silva, A.R. (Piracicaba/Sao Paulo)

225 Genes Involved in the Enamel Development Are Associated with Calcium and Phosphorus Level in Saliva
Küchler, E.C. (Ribeirão Preto); Pecharki, G.D. (Curitiba); Castro, M.L.; Ramos, J.; Barbosa Jr., F. (Ribeirão Preto); Brancher, J.A. (Curitiba); Vieira, A.R. (Pittsburgh, Pa.); Gerlach, R.F. (Ribeirão Preto); Trevilatto, P.C. (Curitiba)

231 In-Office Application of Fluoride Gel or Varnish: Cost-Effectiveness and Expected Value of Perfect Information Analysis
Schwendicke, F. (Berlin); Stolpe, M. (Kiel)

244 Psychometric Properties of the Revised Illness Perception Questionnaire for Oral Health
Villalobos-Galvis, F.H.; Mafla, A.C.; Burbano-Trujillo, W.F.; Sanchez-Figueroa, A.A. (Pasto)

255 Molecular Insights into Covalently Stained Carious Dentine Using Solid-State NMR and ToF-SIMS
Almhöjd, U.S.; Lingström, P.; Nilsson, Å.; Norén, J.G. (Gothenburg); Siljeström, S. (Borås); Östlund, Å. (Stockholm); Bernin, D. (Gothenburg)

264 The Impact of the Demineralized Organic Matrix on the Effect of TiF<sub>4</sub> Varnish on the Progression of Dentin Erosive Loss
Martines de Souza, B.; Vertuan, M.; Buzalaf, M.A.R.; Magalhães, A.C. (Bauru)

240 KLK4 Gene and Dental Decay: Replication in a South Brazilian Population
