In the article by Favié et al. entitled “Phenobarbital, Midazolam Pharmacokinetics, Effectiveness, and Drug-Drug Interaction in Asphyxiated Neonates Undergoing Therapeutic Hypothermia” [Neonatology. 2019;116:154–62, DOI 10.1159/000499330], the following errors occurred:

In Table 2, the clearance estimate for phenobarbital is erroneously listed in mL/h whereas the parameter is given as L/h. The correct value should be 0.0103. In the column to the right, the SIR 95% CI should be 0.00838–0.0121.
