Bibliographic Indices. This publication is listed in bibliographic services, including Current Contents®
and Index Medicus.

Drug Dosage. The authors and the publisher have exerted every effort to ensure that drug selection and
dosage set forth in this text are in accord with current recommendations and practice at the time of publication.
However, in view of ongoing research, changes in government regulations, and the constant flow of information
relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any
change in indications and dosage and for added warnings and precautions. This is particularly important when
the recommended agent is a new and/or infrequently employed drug.

VII Preface

1 Topical Anaesthesia for Small Incision Cataract Surgery
   Bellucci, R. (Verona)

13 Why Viscoadaptives? Are They Really New?
   Arshinoff, S.A. (Toronto)

25 Comparison of Four Viscoelastic Substances for Cataract Surgery in
   Eyes with Cornea guttata
   Mester, U.; Hauck, C.; Anterist, N.; Löw, M. (Sulzbach)

32 The Staar Wave
   Fine, I.H.; Hoffman, R.S.; Packer, M. (Portland, Oreg./Eugene, Oreg.)

41 Phacotmesis
   Kammann, J.; Dornbach, G. (Dortmund)

44 Tilt and Tumble Phacoemulsification
   Davis, E.A.; Lindstrom, R.L. (Minneapolis, Minn.)

59 Phacoemulsification in the Anterior Chamber: Preliminary Results
   Alió, J.L.; Shalaby, A.M.M.; Attia, W.H. (Alicante)

74 Phaco Chop: Making the Transition
   Friedman, N.J. (Stanford, Calif.); Kohnen, T. (Frankfurt am Main/Houston, Tex.);
   Koch, D.D. (Houston, Tex.)

79 Ultrasound-Assisted Phaco Aspiration
   Olson, R.J. (Salt Lake City, Utah)

85 Management of the Mature Cataract
   Masket, S. (Los Angeles, Calif.)
97 Phacoemulsification in the Vitreous Cavity
Ruiz-Moreno, J.M.; Alió, J.L. (Alicante)

106 Capsular Tension Ring as Adjuvant in Phacoemulsification Surgery
Muñoz, G.; Alió, J.L. (Alicante)

119 Optical Coherence Biometry
Haigis, W. (Würzburg)

131 Optical Biometry in Cataract Surgery

141 White-to-White Corneal Diameter Measurements Using the Eyemetrics Program of the Orbscan Topography System
Wang, L. (Heidelberg/Houston, Tex.); Auffarth, G.U. (Heidelberg)

147 Injector Systems for Foldable Intraocular Lens Implantation
Fabian, E. (Rosenheim)

155 Incisions for Implantation of Foldable Intraocular Lenses
Development of a New Caliper, Measurement of Incision Sizes, and Wound Morphology of the Cornea
Kohnen, T. (Frankfurt am Main)

187 Scheimpflug Imaging of Modern Foldable High-Refractive Silicone and Hydrophobic Acrylic Intraocular Lenses
Baumeister, M.; Bühren, J.; Kohnen, T. (Frankfurt am Main)

195 Does the PCO Preventing Square Edge Concept Apply to Acrylic-Hydrophilic Intraocular Lenses?
Jaullery, S.; Sourdille, P. (Nantes)

202 Posterior Capsule Opacification after Implantation of Polyfluorocarbon-Coated Intraocular Lenses: A Long-Term Follow-Up
Auffarth, G.U.; Ries, M.; Tetz, M.R.; Faller, U.; Becker, K.A.; Limberger, I.-J.; Völcker, H.E. (Heidelberg)

209 Piggyback Intraocular Lens Implantation
Gills, J.P.; Fenzl, R.E. (Tarpon Springs, Fla.)

217 Multifocal Intraocular Lenses
Claoué, C.; Parmar, D. (London)

238 Author Index
239 Subject Index
Although the first implantation of an intraocular lens (IOL) was undertaken just over 50 years ago (by Sir Harold Ridley, November 29, 1949 at St. Thomas’s Hospital, London, UK), removal of the natural lens with implantation of an IOL is the most commonly performed surgical intervention in humans. With small-incision surgery, using topical anesthesia, ultrasound or laser energy to remove the cataractous lens material and implantation of a foldable IOL, the patient can experience low invasiveness and fast rehabilitation of visual function. In this book, experts in the field of cataract surgery from all over the world have documented their clinical experience, research results and inventions to achieve the goal of successful modern cataract surgery.

The present volume starts with a summary on topical anesthesia, followed by new research on ophthalmic viscoelastic substances (OVD), formerly called ‘viscoelastics’. Many of the articles report on new equipment and techniques for cataract removal, particularly in difficult surgical situations such as hard nucleus, mature cataracts and loss of lens material into the vitreous cavity as a complication of cataract surgery. Following removal of the lens, the now aphakic patient should be made pseudophakic to achieve acceptable vision. One important element of IOL implantation is to choose the correct lens power. The improvement of IOL power calculations is demonstrated by optical coherence biometry, a new measuring device to determine axial length. Two elements of sophisticated cataract surgery are to implant the IOL through an incision which is as small as possible but still large enough to reduce the risk of inflammation and induced astigmatism, and to choose the best IOL material and design for good long-term results. New methods to correct aphakia include the implantation of more than one IOL in high hyperopes and myopes (piggyback implantation) and multifocal IOLs (treatment of presbyopia after natural lens removal).
I wish to thank Prof. Behrens-Baumann for the invitation to edit this book in the series of *Developments in Ophthalmology*, Susanna Ludwig and Susanne Stolz of S. Karger Publishers for their editorial help, and all contributing authors for their effort to provide scientific information in this exciting subspecialty of ophthalmology.
