Subject Index

Anesthesia, see Topical anesthesia, cataract surgery
Anterior chamber depth
capsule shrinkage effects 139
IOLMaster measurement 123
Scheimpflug imaging 189, 190
Anterior chamber phacoemulsification comparison with phaco stop and chop
best-corrected visual acuity 62, 71
corneal edema 62, 71
corneal thickness 68, 71
endothelial cell count 66, 67, 71
evaluation parameters (table) 64, 65
intraocular pressure 62, 63
laser flare cell meter count 65, 71
ultrasound time, power 62
historical perspective 59, 60, 68
indications 72
patient selection, evaluation 60
phacoemulsification techniques, popularity 68–70
postoperative treatment, follow-up 61, 62
technique 60, 61
Aspiration, phacoemulsification 80

Biometry, see Optical coherence biometry, Scheimpflug imaging, Ultrasound biometry
Brunescent cataract, see Nuclear mature cataract

Capsular tension ring
actions 106, 113, 114, 117
anterior capsule contraction syndrome 115, 116
case studies 106–109, 111
indications 106, 112, 113
material 106, 111
posterior capsule opacification 116, 117, 195
sceral fixation 114, 115
sizes 111, 112
suppliers 111
zonular dialysis, signs of loose or broken zonules 115
Capsulorhexis, see also Cortical mature cataract, Tilt and tumble
phacoemulsification
ophthalmic viscosurgical devices 20–22
visibility enhancement techniques 88
Cocaine, topical anesthesia, cataract surgery 1

Cortical mature cataract
anterior capsulorhexis 87–89
clinical features 85–87
complication management, surgery 92
cortex removal 92
hydrodissection 89, 90
morgagnian cataract 87
nuclear emulsification 92
preoperative evaluation 87
viscoelastic agent selection 88, 89
visualization, anterior capsule 89

Dispersive-cohesive viscoelastic soft shell technique, ophthalmic viscosurgical device utilization 14, 16
Intracapsular cataract extraction, phacoemulsification comparison 59, 70, 71

Extracapsular cataract extraction, phacoemulsification comparison 59, 70, 71

Foldable lens, see Intraocular lens

Fuchs’ dystrophy, ultrasound-assisted phaco aspiration case studies 81, 82

Healon, see Ophthalmic viscosurgical device, Viscoelastics

Indocyanine green, anterior capsule visualization, mature cataract surgery 89

Intralenticular opacification, incidence with piggyback lens implantation 213–215

Intraocular lens

biometry, see Optical coherence biometry, Scheimpflug imaging, Ultrasound biometry

capsule shrinkage effects, anterior chamber depth 139

historical perspective 217

incisions, foldable lens implantation cadaver eyes, globe preparation for study 156

caliper development, incision size measurement design 166, 167

performance 175, 177

standard calipers 158

clinical studies

factors affecting incision size 180–184

lens features 162, 163

measurement, incision size 165, 173–175, 180

patients 162, 163

statistical analysis 165

surgical procedure 164, 165

corneal damage, insertion through minimal incision 161, 162, 169, 170, 173, 178–180

incision size determination 159–161

intact globe versus removed cornea measurement 167–170

lens and implantation device type effects, incision size 157, 158, 168, 175, 177, 178, 180–184

minimum incision size studies 169, 170, 177, 178

rationale, foldable lenses and small incision size 155, 190

scanning electron microscopy, incisions 161, 162, 170, 173, 178, 179

surgical procedure 158, 159

injector systems, foldable lens implantation classification, inserter systems 147

EasyPack 150, 152, 153

EasySert 150–152

historical perspective 152

injection technique 147, 149, 153, 154

Lens Injector Set 150–152

lens specificity 152, 153

Microserter 149–151

Monarch 149, 151

Mport 149, 150, 152, 153

Passport 149, 150, 153

Sensar 149

Unfolder 149, 151

lens-capsule distance measurement 137, 138

multifocal intraocular lens, see Multifocal intraocular lens

ophthalmic viscosurgical devices, implantation 20

piggyback intraocular lens implantation high-hyperopia treatment measurements and calculations 209–211

surgical technique 211, 212

indications 209

intralenticular opacification incidence 213–215

secondary implantation, over- or underpowered pseudophakes 212, 213
posterior capsule opacification,
see Posterior capsule opacification
posterior chamber intraocular lens
implantation, vitreous cavity
phacoemulsification 102
Scheimpflug imaging, foldable lenses
anterior chamber depth 189, 190
decentration 189–191
lenses, evaluation 187, 189, 191
posterior capsule opacification 189,
192
technique 189
tilt 189–191
white-to-white measurement, see
Orbscan topography system
Intumescent cataract, see Cortical mature
cataract
IOLMaster
anterior chamber depth measurement
123
instrumentation 119, 120
intraocular lens constant optimization
125–127
keratometry 123
observer dependence and learning curve
124
refractive outcome after cataract surgery
compared with ultrasound biometry
135, 136
ultrasound axial length comparison and
conversion 120–123
Laser
interference biometry, see Optical
coherece biometry
phacoemulsification safety 79
Lens Injector Set, foldable intraocular lens
injection 150–152
Lidocaine, topical anesthesia for cataract
surgery
formulations 3, 4
gel 7
intraocular penetration 4, 5
side effects 5
sponges 8
systemic levels 4, 5
toxicity 5
Mature cataract, see Cortical mature
cataract, Nuclear mature cataract
Microserter, foldable intraocular lens
injection 149–151
Monarch, foldable intraocular lens injection
149, 151
Morgagnian cataract, see Cortical mature
cataract
Mport, foldable intraocular lens injection
149, 150, 152, 153
Multifocal intraocular lens
advantages over monofocal lenses 235
designs
models and manufacturers 218, 219,
235
refractive versus diffractive optics 218
effectiveness of models
combined distance and near visual
acuities 228
contrast sensitivity 230, 231
deepth of focus 228–230
distance visual acuity 221, 224, 225
driving ability 233, 234
independence from spectacles 234
measures 221
near visual acuity 226–228
patient satisfaction and quality of life
234, 235
table 222, 223
visual symptoms 231–233
rationale for development 217, 218
Nuclear mature cataract
clinical features 85, 93
definition 93
surgical management
advantages 95
capsulorhexis 94
hydrodissection 94
nuclear emulsification 94
nuclear sculpting 94, 95
preoperative evaluation 93
Ophthalmic viscosurgical device,
see also Viscoelastics
advantages and limitations of classes
14, 16

Subject Index
Ophthalmic viscosurgical device (*continued*) applications
    anterior hyaloid face dissection from posterior capsule 19
capsulorhexis 20–22
cornea transplantation 20
intraocular lens implantation 20
partial filling, anterior chamber 20
phaco tumble techniques 19
trauma 20
trypan blue utilization 20, 22, 23
viscomydriasis 20
vitrectomy 21
wound blockade 21
classification 14, 15
dispersive-cohesive viscoelastic soft shell technique 14, 16
pseudoplasticity curves 18, 19
removal techniques 23, 24
types 13, 16
ultimate soft shell technique 21–23
viscoadaptive response to fluid turbulence 16–18
Optical coherence biometry, see also IOLMaster
advantages over ultrasound biometry 125, 128, 129, 132–135, 137
dual beam partial coherence interferometry 132–136
historical perspective 110
intraocular lens constant optimization 125–127
lens-capsule distance measurement 137, 138
limitations 129
principles 132, 133
pseudophakic measurements 136–139
reference system 122
refractive outcome, cataract surgery 133–136
ultrasound axial length comparison and conversion 120–123
Orbscan topography system accuracy 142–144
instrumentation 141, 142
problem cases 143, 145
white-to-white measurement 141
Partial coherence interferometry, see Optical coherence biometry
Passport, foldable intraocular lens injection 149, 150, 153
Phaco chop
advantages 77, 78
anterior chamber phacoemulsification comparison, see Anterior chamber phacoemulsification
chopping technique 76
complications 77
historical perspective 74, 75
instrumentation 75
patient selection 75
principles 75, 80
training 77
ultrasound assistance
    Fuchs’ dystrophy case studies 81, 82
    irrigation forces 82, 83
    rationale 80
    technique 80, 81
Phacoemulsification, see Anterior chamber phacoemulsification, Capsular tension ring, Phaco chop, Phacotmesis, Staar Wave, Tilt and tumble phacoemulsification, Viscoelastics, Vitreous cavity phacoemulsification
Phaco-out, see Anterior chamber phacoemulsification
Phacotmesis
    indications 42, 43
    principles 41
    technique, phacoemulsification 41
tip size effects 42
Piggyback intraocular lens implantation, see Intraocular lens
Posterior capsule opacification
    acrylic-hydrophilic intraocular lens studies of square edge prevention lens characteristics 196, 197
    opacification, first-generation lenses 195
    patient groups and outcomes 197, 198, 200
    square edge concept 195
    surgical technique 197
    assessment techniques 200, 203, 204
capsular tension ring effects 116, 117, 196
incidence following lens implantation 204, 205
lens epithelial cell migration 195, 200
polyfluorocarbon-coated intraocular lens study
functional outcomes 206, 207
opacification assessment 202–206
rationale 202
study design 202, 203
Scheimpflug imaging 190, 192
Retina, protection in vitreous cavity
phacoemulsification 105
Scheimpflug imaging
foldable lens imaging
anterior chamber depth 189, 190
decentration 189–191
lenses for evaluation 187, 189, 191
posterior capsule opacification 189, 192
technique 189
tilt 189–191
historical perspective 187
Sensar, foldable intraocular lens injection 149
Staar Wave
conventional surgical features 32, 33
instrumentation 32, 33
limitations of current ultrasonic tips 33, 34
Sonic technology advantages 34–36, 39
SuperVac tubing 36, 37, 39, 40
Wave Powertouch user interface 37–39
Tetracaine, topical anesthesia, cataract surgery 3
Tilt and tumble phacoemulsification
advantages 54
capsulorhexis 44, 45, 52, 53
closure 51
corneal incision and approaches 49–51
cortex removal 55
historical perspective 44–46
hydrodissection 53–55
indications 46, 47
keratotomy 51, 52
posterior lens chamber seating 56
postoperative care 57
preoperative preparation
anesthesia 47, 48
aperture drape 48
periocular prep 48
speculum separation, lids 48, 49
Storz Millennium utilization 55
variations in technique 57, 58
viscoelastic
injection 53, 54, 56
selection 52
Topical anesthesia, cataract surgery
advantages over injection 2
bilateral instillation 6
clinical experience, small incision
surgery 8, 9
complications management 7
historical perspectives 1
instillation schedule 6
intraocular irrigation 6, 9
lidocaine
formulations 3, 4
gel 7
intraocular penetration 4, 5
side effects 5
sponges 8
systemic levels 4, 5
toxicity 5
patient selection and instructions 6
postoperative instructions 7
receptor block principles 2, 3
requirements 2
surgical technique 6, 7, 10
tetracaine 3
tilt and tumble phacoemulsification
47, 48
Trypan blue
anterior capsule visualization, mature
cataract surgery 89
utilization, ophthalmic viscosurgical
device 20, 22, 23
Ultimate soft shell technique, ophthalmic
viscosurgical device utilization 21–23
Ultrasound, see Phaco chop,
Phacoemulsification, Staar Wave
Ultrasound biometry
accuracy 131
applanation versus immersion axial eye
length measurements 131, 210
optical axial length comparison and
conversion 120–123
optical coherence biometry comparison
125, 128, 129, 132–135, 137
piggyback intraocular lens implantation
measurements 210
Unfolder, foldable intraocular lens injection
149, 151

Viscoadaptive, see Ophthalmic
viscosurgical device, Viscoelastics
Viscoelastics
classification 25
cornea guttata comparative study of
phacoemulsification
central corneal thickness outcomes
27–30
central endothelial cell outcomes 27,
28
study design 26, 27, 29
surgical technique effects on
endothelial impairment 29
viscoelastic physical and chemical
properties 26, 30
surgical trauma protection 28
tilt and tumble phacoemulsification
injection 53, 54, 56
selection 52
Vitreous cavity phacoemulsification
advantages over nuclear extraction 103,
104
best corrected visual acuity outcomes
101, 102, 104
complication incidence 97, 102, 103
indications 99
patient characteristics and selection
97–99, 104
posterior chamber intraocular lens
implantation 102
retinal protection 105
three-port pars plana vitrectomy 99,
100

White-to-white measurement, see Orbscan
topography system
Zonular dialysis
capsular tension ring indication 106,
