Subject Index

Adrenergic receptor, insulin resistance candidate genes
β2-adrenergic receptor 86
β3-adrenergic receptor 85, 86
Alcohol, cognition effects 133
Alligator, egg incubation temperature determination of sex 33
Alzheimer disease
mitochondrial DNA mutations 7, 8, 10
nutrient deficiencies 248, 249
subcortical triad 249
Apoptosis, mitochondria role 11
Appetite, see Energy intake
Arginine vasopressin, water balance mechanisms 198
Ascorbic acid, see Vitamin C
Atrophic gastritis, aging association 98, 99, 107

Bioelectrical impedance analysis
body composition studies 67
hydration analysis 200, 201, 205, 206
Biondi bodies, aging marker 4
Body composition
bromine as frailty factor 75–77
compartamental models 64
compartments 63
elemental partition analysis
carbon-nitrogen-calcium model 69
carbon-to-oxygen ratio 69–71
overview 68
single partition analysis 68, 69
epidemiology studies 77
fat
loss in aging 49, 75
percentage increase in aging 64, 75
fat-free mass determination 63, 64, 71, 72
functional frailty 76, 77
hydration status 64
intracellular hydration in lean mass 74, 75
measurement techniques
anthropometry 67
bioelectrical impedance analysis 67
dual energy X-ray absorptiometry 67, 68
field methods 73, 76–78
hydrodensitometry 67
imaging 68, 73, 76, 248
reference methods 73
total body nitrogen 67, 68
physical assessment in aging
prediction 226, 227
quality of lean principle 71, 72, 75
Subject Index

Body composition (continued)
  total body potassium and lean body mass 64, 66, 67, 71, 72
Bone mineral density
  acid-base concept 114, 115, 119
  calcium intake and supplementation 109, 110, 118
  cross-sectional studies 109
  dairy product composition and benefits 110, 111, 120
  fiber nutrition 119, 120
  food clustering 113
  hormone replacement therapy benefits 118
  parathyroid hormone effects 117
  physical activity benefits 117
  phytoestrogen benefits 118
  potassium intake 114
  protein intake studies 111, 112, 118, 119
  sodium chloride intake effects 113
  vegetarian diet effects 113, 114
  vitamin D supplementation 111, 118
  vitamin K recommendations 112, 113, 117
Bromine, frailty factor 75–77

Calcium, intake and supplementation 109, 110, 118
Caloric restriction
  bone effects 119
  cataract onset effects 32, 190, 191
  cognition effects 132
  environmental stress interactions 29, 30
  fluid restriction implications 28
  gene expression profiling with DNA microarrays
    limitations 26
    mouse brain
      aging effects, global results 21, 22
      caloric restriction and transcriptional reprogramming 24, 25
      inflammatory and stress response genes in aging 22–24, 29
    mouse gastrocnemius muscle studies
      aging downregulated genes 19, 20
  aging upregulated genes 18, 19
  caloric restriction effects 20, 21
  macromolecular damage decrease 21
  metabolic shift 20, 21
  principles 18
  prospects for study 26
  rhesus monkey vastus lateralis muscle
    aging effects 25
    caloric restriction effects 25, 26
  statistical analysis 31
  insulin signaling 30
  mechanisms 17
  mimetics 32
  physical activity effects 30
  preweaning diet restriction and aging 35
  species specificity of lifespan extension 17, 29
β-Carotene, cataract protection 177–180
Cataract
  age-related prevalence annual cost 163, 164, 190
  caloric restriction effects on onset 32, 190, 191
  epidemiological studies of antioxidant prevention
    antioxidant combinations 181
    β-carotene 177–180
    intake recommendations 183, 189
    lutein 180
    study design 168, 169
    vitamin C 169, 172, 173
    vitamin E 173, 175–177
  intervention studies of antioxidant prevention 181, 182
  lens protein turnover 164, 190
  light exposure risks 182, 189
  neurodegeneration role 190
  oxidative stress in pathophysiology 164–166, 182, 183
  prenatal nutrition effects 37
  protective mechanisms in lens
    antioxidant enzymes 167
    carotenoids 167
    glutathione 166, 167
Subject Index

proteases 167, 168
tocopherols 167
vitamin C 166
Cholecystokinin
cognition effects 121, 131–133
sensitivity in aging 101, 102
Cholesterol, cognition effects 125, 126, 132
Choroid plexus, aging effects 14
Cocaine-amphetamine-related transcript, insulin resistance candidate gene 87
Cognition
assessment in aging prediction 232, 233
effects
alcohol 133
caloric restriction 132
cholecystokinin 121, 131–133
cholesterol 125, 126, 132
cytokines 123
glucose levels in blood 123
vitamin deficiency 126, 132, 134
exercise benefits 158
fatty acid intake and membrane composition 124, 131, 134
food regulation mechanisms 121, 122
free radical scavenger studies 126, 127, 133
ginkgo biloba studies 127
oxidative stress in decline 126
Colonic motility, aging effects 103, 104
Complement, gene expression in aging mouse brain 22, 23
Cytochrome c oxidase, deficiency in mitochondrial disease and aging 5, 6–8, 10, 14
Dairy products, composition and bone benefits 110, 111, 120
Dehydration, see Hydration
Depression
exercise benefits 155–157
Geriatric Depression Scale, aging prediction 232, 233
Huntington disease 243, 244
nutrient deficiency association 245
sarcopenia interactions 155
Disability, definition 224
DNA microarrays
caloric restriction studies limitations 26
mouse brain
aging effects, global results 21, 22
caloric restriction and transcriptional reprogramming 24, 25
inflammatory and stress response genes in aging 22–24, 29
mouse gastrocnemius muscle studies
aging downregulated genes 19, 20
aging upregulated genes 18, 19
caloric restriction effects 20, 21
macromolecular damage decrease 21
metabolic shift 20, 21
prospects for study 26
rhesus monkey vastus lateralis muscle
aging effects 25
caloric restriction effects 25, 26
statistical analysis 31
gene expression profiling principles 18
Elemental partition analysis
carbon-nitrogen-calcium model 69
carbon-to-oxygen ratio 69–71
overview 68
single partition analysis 68, 69
Energy intake
anorexia of aging 49
cultural differences 107, 108
food preferences in aging 61
impaired regulation in the elderly biobehavioral and social factors 55, 56, 58
dietary variety 56, 58, 60
hunger response 53
metabolic mechanisms 55
multiple etiology 54, 55
sex differences 61
study design and outcomes 50, 51, 53
medication effects 108
supplementation in the elderly 60, 61
Subject Index

c-Fos, gene expression in aging mouse brain 23
Fatty acid-binding protein-2, insulin resistance candidate gene 90
Fatty acid nutrition
  immune system effects 211
  membrane composition effects and cognition 124, 131, 134
Fiber, nutrition and bone health 119, 120
Fluid intake, see Hydration
Folic acid, dementia role 242, 243
Food guide pyramid, modification for the elderly 203

Gait disorder, nutrient deficiency association 245
Gastric emptying, aging effects 106, 107
Gastrointestinal system, aging effects
  colon 103, 104
  esophagus 98
  gallbladder 101, 102
  liver 101
  pancreas 100, 101
  small intestine and nutrient absorption 102, 103
  stomach 98–100, 106, 107
  taste 97, 98, 106
Geriatric Depression Scale, aging prediction 232, 233
Ginkgo biloba, cognition studies 127
Glial fibrillary acidic protein, gene expression in aging mouse brain 23
Glutathione
  cataract protection 166, 167
  immune system effects of supplements 216, 217
Glycogen synthase, insulin resistance candidate gene 88

Heat shock protein, gene expression in aging mouse brain 23
Helicobacter pylori, aging and infection 98, 99, 108
Hepatic lipase, insulin resistance candidate gene 90
Homocysteine
  motor impairment vs IQ 250
  neurodegenerative disease association 242, 243, 247, 248
Hormone replacement therapy
  bone benefits 118
  overall health benefits 160
Huntington disease, bicaudate ratio and cognition 243, 244

Hydration
  body composition and hydration status 64, 198
  body water compartments 198–201
  dehydration risks in aging
    classification of dehydration 201
    clinical detection 201, 202, 205, 206
    epidemiology 201, 202
    kidney control of fluid loss 197
    overview 193
  exercise benefits 202
  fluid intake in aging
    concerns in the elderly 238, 239
    consumption trends 194, 195, 203
    definition of dehydration 202, 203
    taste and odor perception role 195
    thirst perception 196, 197
    intracellular hydration and lean muscle mass 74, 75
    mineral water vs tap water 205
    nutritional programming and dehydration 47
    water balance mechanisms 198

Immune function
  acquired vs innate immunity 207, 208
  age-related dysregulation 207
  B cell function in aging 209
  delayed-type hypersensitivity skin test 207, 221
  nutritional regulation
    fatty acids 211
    malnutrition and infection 209, 210
    micronutrients 210
    supplementation studies
      glutathione 216, 217
      selenium 212
      table of studies 213, 214
      vitamin B6 212, 215
      vitamin E 215, 220, 221
      zinc 215, 216

Subject Index

Muscle (continued)
metabolic shift 20, 21
rhesus monkey vastus lateralis muscle
aging effects 25
caloric restriction effects 25, 26
conceptual framework of nutrition and muscle function relationship in aging 137, 138, 142
epidemiological studies of nutrition effects in aging
cross-sectional design 138, 139, 142
longitudinal design 139, 140
exercise effects 135, 136, 149
regimen for muscle benefits 162
trends over lifespan 160, 161, 224
functional measures 136
grip strength measurement with arthritis 147, 148
importance of status in health of elderly 135
mass decrease in aging 225
nutritional supplementation effects in elderly 140, 141, 147, 148
peak muscle function 160
protein nutrition effects 140, 141, 148–150
sarcopenia
characteristics 151, 152
cytokine roles 153, 155, 160, 161
definition 225
depression association 155
exercise reversal 155, 161, 162, 225
pharmacotherapy 161, 162
physiology 152, 153, 155, 160
prevalence 151, 225, 226
strength assessment in aging prediction 227
strength vs function 142, 143, 225
total body nitrogen determination 67, 68

Neuropeptide Y, insulin resistance candidate gene 87
Noise, developmental effects 34
Nutritional programming

adult size 34
breast feeding vs bottle feeding 46, 47
cardiovascular risk factors 36
cataract 37, 42
dehydration 47
diabetes 37, 42
depression association 155
exercise reversal 155, 161, 162, 225
lifelong exposure-response model of aging 39
Obesity
exercise benefits 162
prenatal nutrition effects 34, 46
sarcopenic obesity 148, 153
osteoporosis
bone mineral density, see Bone mineral density
prenatal nutrition 37
Parathyroid hormone, bone effects 117
Peroxisome proliferator-activated receptor, insulin resistance candidate genes 87, 89, 90
Physical assessment
aging prediction
body composition 226, 227
cognitive function 232, 233
muscle strength 227
overview 223, 224
physical activity 228, 237, 238
physical performance test 229, 232
walking speed and stride 227, 228
functional capacity and stride 227, 228
minimum physical assessment proposal 233, 234
screening 239
Physical performance test, assessment in aging prediction 229, 232
Subject Index

Prenatal nutrition, see Nutritional programming

Proopiomelanocortin, insulin resistance candidate gene 87, 91

Protein nutrition
  bone effects 111, 112, 118, 119
  muscle effects 140, 141, 148–150

Resistin, insulin resistance candidate gene 87, 88

Salt, intake effects on bone 113

Sarcopenia, see Muscle

Selenium, immune system effects of supplements 212

Sleep disorders, exercise benefits 157, 158

Syndrome X, cardiovascular risk 79, 80

Taste
  aging effects 97, 98, 106
  fluid intake role 195

Thirst, perception in aging 196, 197

Tumor necrosis factor-α, insulin resistance candidate gene 85, 94

Uncoupling proteins, insulin resistance candidate genes 84, 91

Vagal pacemaker, indications 131

Vegetarian, bone health 113, 114

Vitamin B₆
cognition role 126
deficiency and aging 103
  immune system effects of supplements 212, 215

Vitamin B₁₂
cognition role 126, 134
deficiency and aging 99, 106, 242
dementia role 242, 243

Vitamin C, cataract protection
  epidemiological studies 169, 172, 173
  lens levels 166

Vitamin D
deficiency in elderly 103
  supplementation 111, 118

Vitamin E
cataract protection 173, 175–177
cognition effects 126, 127, 134
  immune system effects of supplements 215, 220, 221

Vitamin K, intake recommendations 112, 113, 117

Walking, speed and stride assessment in aging prediction 227, 228

Water, see Hydration

Wernicke-Korsakoff syndrome, etiology and pathophysiology 241, 242

Zinc, immune system effects of supplements 215, 216
