Subject Index

Acridine dye, paramecium toxicity 5, 6
Al(III)phthalocyanine tetrasulfonate accumulation in vascular and tumor cell systems 43–45
aggregation 26–28
photokinetics, subcellular 45, 46
spectroscopic studies 26
structure-activity relationships 25, 26, 28
5-Aminolevulinic acid
active compound, see Protoporphyrin IX
cervical dysplasia photodynamic therapy irradiation technique 266
light diffuser 266, 267
outcome 267, 268
topical application 265
ectopic pregnancy photodynamic therapy studies
mouse 304
rat 302–304
endogenous levels 208
endometrial ablation
menorrhagia treatment
advantages and disadvantages 225
bleeding outcomes 236, 237, 240
clinical studies 223, 224, 234–237
light applicators 243, 244, 246–248, 250
morphological analysis 235, 236
overview 176, 177, 179, 180, 238, 239
parameters for clinical use 225, 226
patient selection 240, 241
perfused uterus 219, 220
photosensitization in vivo 220–222
regeneration of tissue 239, 240
ultrasound findings 235, 236
monkey studies
endometrial suppression and progestin withdrawal 214
histopathology 214–216
segments of ablation 216, 217
technique 213, 214, 217
pharmacokinetics of 5-aminolevulinic acid and protoporphyrin IX in uterus endoluminal diffusion 232, 233
fluorescence microscopy 228, 229, 231
specimen retrieval 228
study design 227, 228
topical drug application 228
urine analysis 229, 232
rat and rabbit studies
heat generation 198, 204
histology 185, 192–194, 201
laser delivery system 186, 187
macroscopic changes 191
pharmacokinetics 184, 185, 187, 189, 199, 200
reproductive performance assessment 186, 195
skin photosensitivity 186
temperature measurements 187
endometriosis
diagnostics
advantages 310, 311
laparoscopy and fluorescence detection 309, 310
rationale 308, 309
photodynamic therapy studies
rabbit 305
rat 305, 306
fluorescence studies of induced protoporphyrin IX in gynecological cell lines
cell culture 76, 77
flow cytometry measurements 77
incubation of 5-aminolevulinic acid 77
intensity of fluorescence 78, 82
laser treatment 77
photobleaching 79, 80, 82, 83
photodynamic effect 83, 84
phototoxicity towards cells and mitochondria 80, 81
viability assays 77, 78
metabolism
biosynthesis 208
excretion 209
selectivity of tissues 206
tumors 169
toxicology 209, 210
vulvar condyloma photodynamic therapy
fluorescence imaging 262, 263
outcomes 258, 261
principle 251
rationale 251, 252
selective photosensitization 252–254, 256, 257, 263
technique 254–256
vulvar intraepithelial neoplasia
photodynamic therapy
fluorescence imaging 262, 263
outcomes 261
principle 251
technique 254–256
Apoptosis
definition 157, 158
mediators 159
mitochondria targeting for induction
Bcl-2 role 159, 163, 164
calcium release role
homeostasis 161
overview 157–159
pathways for release 161
peroxynitrite stimulation 162, 163
prooxidant-induced, NAD^+/-linked release 162
membrane potential in cancer cells 164, 165
nitric oxide role
biology 160
cytochrome oxidase regulation 160, 163
overview 157–159, 164
synthesis 160, 161
tetra(m-hydroxyphenyl)chlorin damage 158, 164, 165
Arrhenius-Eyring model, chemical reactions 53
Assisted reproductive technologies,
see Photon-assisted reproduction
Bcl-2, apoptosis role 159, 163, 164
Beer’s law 102, 120
Benzoporphyrin derivative mono acid, endometrial ablation studies in rat and rabbit
heat generation 198, 204
histology 185, 192–194, 201
laser delivery system 186, 187
macroscopic changes 191
pharmacokinetics 184, 185, 189
reproductive performance assessment 186, 195, 202, 203
skin photosensitivity 186
temperature measurements 187
Breast cancer
epidemiology 312
mTHPC photodynamic therapy for recurrent disease
advantages 322
outcome 324, 325
study design 322–324
optical characterization with frequency-domain photon migration 124, 125, 127–130
photodynamic therapy, history and overview 312, 313
Subject Index 376

Breast Cancer (continued)
SnET2 photodynamic therapy for skin metastases
outcomes 319, 320
patient selection 317, 318
study design 316, 317
treatment modality 318, 319
treatment overview 312

uptake in vivo 22
vascular injury 22, 23
ZnPc accumulation 43-45

CIN, see Cervical dysplasia
Condylomata acuminata, see Vulvar condyloma
Confocal microscopy, subcellular localization of photosensitizers 41, 42

Calcium, apoptosis role via mitochondria
homeostasis 161
overview 157–159
pathways for mitochondrial release 161
peroxynitrite stimulation 162, 163
prooxidant-induced, NAD+ -linked release 162
CD44V, photodynamic therapy effects on expression 175
Cell adhesion, photodynamic therapy effects 174, 175
Cercosporin, photosensitizer features 32, 33
Cervical carcinoma in situ
Porfimer sodium photodynamic therapy
advantages 276
outcomes 272, 274–276
prospects 276, 277
technique 270, 271
recurrent cancer treatment with photodynamic therapy 278–283
Cervical dysplasia
5-aminolevulinic acid photodynamic therapy
irradiation technique 266
light diffuser 266, 267
outcome 267, 268
topical application 265
clinical findings 265
Porfimer sodium photodynamic therapy
advantages 276
outcomes 272, 274–276
prospects 276, 277
technique 270, 271
treatment options 268
Chorioallantoic membrane
phthalocyanine accumulation 43–45
porphycenes
Cell culture 21, 22

Diode laser, 1480-nm, laser-assisted hatching
advantages and overview 334, 335, 356,
360, 361, 363
drilling technique 354–356
human studies 335, 359, 360
instrumentation 353, 354
mouse studies 335, 356–359, 361
DNA lesions, photodynamic therapy
induction 171, 172
Dosimetry, see Optical dosimetry

Ectopic pregnancy
5-aminolevulinic acid photodynamic therapy studies
mouse 304
rat 302–304
diagnosis and conventional treatment 302

Endometrial ablation
menorrhagia treatment with
5-aminolevulinic acid
advantages and disadvantages 225
bleeding outcomes 236, 237, 240
clinical studies 223, 224, 234–237
light applicators 243, 244, 246–248, 250
morphological analysis 235, 236
overview 176, 177, 179, 180, 238, 239
parameters for clinical use 225, 226
patient selection 240, 241
perfused uterus 219, 220
photosensitization in vivo 220–222
regeneration of tissue 239, 240
ultrasound findings 235, 236
monkey studies with 5-aminolevulinic acid
endometrial suppression and progestin withdrawal 214
histopathology 214–216
segments of ablation 216, 217
technique 213, 214, 217
pharmacokinetics of 5-aminolevulinic acid and protoporphyrin IX in uterus endoluminal diffusion 232, 233 fluorescence microscopy 228, 229, 231 specimen retrieval 228 study design 227, 228 topical drug application 228 urine analysis 229, 232 photodynamic therapy, overview advantages 177 history of study 177, 179, 180 photosensitizers 177 photosensitizer studies in rat and rabbit endometrium 5-aminolevulinic acid 183, 187, 189, 195, 199–202 benzoporphyrin derivative mono acid 183, 184, 189, 195, 202, 203 heat generation 198, 204 histology 185, 192–194, 201 laser delivery system 186, 187 macroscopic changes 191 pharmacokinetics 184, 185, 187, 189, 190, 199–201 Photofrin 184, 189, 195, 200 Photofrin + azone 190, 196, 198, 200, 201 reproductive performance assessment 186, 194–196, 202, 203 skin photosensitivity 186 temperature measurements 187 thermal techniques 176, 177 Endometrial cancer Protoporphyrin IX accumulation 240, 241 Endometriosis 5-aminolevulinic acid diagnostics advantages 310, 311 laparoscopy and fluorescence detection 309, 310 rationale 308, 309 5-aminolevulinic acid photodynamic therapy studies rabbit 305 rat 305, 306 clinical features 308 surgical resection 304 Endometrium, see endometrial ablation Er:YAG laser, 2,940-nm, laser-assisted hatching criteria for success 369, 370 human studies 334, 368–370 instrumentation 366, 367 mouse studies 334, 367 technique 367 Fluorescence imaging, see also Confocal microscopy algorithms 135–138 artifact sources 136 dark noise image 137, 138 history 134 image formation 136 instrumentation 134, 135 light distribution image 137, 138 photodynamic therapy applications 140–142, 144, 145 saturation 139, 140 target tissue-to-normal tissue ratio calculation 140, 142, 144 Frequency-domain photon migration applications 117, 130 breast tumor characterization 124, 125, 127–130 instrumentation 122–124 principle 121, 122 Game micromanipulation, see Photon-assisted reproduction Graft vs host disease, hypericin therapy 31, 32 Hatching failure, see Photon-assisted reproduction Hematoporphyrin history of use 6–8 photoproduct formation 86, 87, 91–95 photoreaction 86 recurrent cancer treatment with photodynamic therapy 278–283 Hematoporphyrin derivative cancer treatment 8, 9, 14 development 8, 9, 14

Subject Index
Hematoporphyrin derivative (continued)  
intraperitoneal photodynamic therapy for recurrent cancer treatment, preclinical studies 287–289 limitations 15 photoproduct formation 86, 87, 91–95 photoreaction 86
