Contents

Preface ................................................................................................................................ IX
Burg, G. (Zürich)

1 Telemicine in a New World

1.1 The Telemical Information Society: Doctors' Playground or a Contribution to the Evolution of Healthcare? ....................................................... 2
Burg, G.; Denz, M. (Zürich)

1.2 The History of Telemicine .................................................................................. 6
Cipolat, C.; Geiges, M. (Zürich)

1.3 Technology

1.3.1 The Communication Revolution Goes On – Global High-Speed Networks: Setting the Pace for Future Multimedia Applications ................................................................. 12
Häffner, A.; Zepter, K. (Zürich)

1.3.2 Image and Video Compression: The Principles Behind the Technology ................................................................. 17
Burg, A. (Zürich)

1.3.3 Teledermatology Delivery Modalities: Real Time versus Store and Forward ......................................................................................... 24
Whitten, P.S. (East Lansing, Mich.)

2 Teleteaching

2.1 Teleteaching Tools in Dermatology on the Web ................................................. 33
Kropf, R.; Cipolat, C.; Burg, G. (Zürich)
2.2 Telemedical Training at the Department of Gynaecology, University Hospital Zürich ................................................................. 39
   Haller, U.; Gabathuler, H. (Zürich)

2.3 Towards a Virtual Education in Pharmaceutical Sciences:
   An Innovative E-Learning Approach .............................................. 43
   Tran, V.V.; Lichtsteiner, S.; Ernst, B.; Otto, M.;
   Folkers, G. (Zürich)

3 Teleconsulting: Legal, Ethical and Consumer Aspects

3.1 Changes Patients Expect to Result from Telemedicine .................. 53
   Tachakra, S. (London)

3.2 Satisfaction of Paramedical Personnel ........................................... 58
   Hicks, L.L. (Columbia, Mo.)

3.3 Economic Aspects – Saving Billions with Telemedicine:
   Fact or Fiction? ............................................................................ 62
   Kristiansen, I.S. (Odense); Poulsen, P.B. (Kolding); Wittrup Jensen, K.U. (Odense)

3.4 Secure Transfer of Medical Data over the Internet:
   From Regulatory Data Protection Jam to Framework-Based
   Requirements ................................................................................ 71
   Boesch, H.; Airaghi, G. (Küsnacht/Zürich)

3.5 Potential of Telemedicine in Primary Care .................................... 76
   Reichlin, S.; Dyson, A.; Müller, D.; Fischer, A.; Fischer, H.R.;
   Beglinger, C. (Basel)

4 Fields of Application of Telemedicine

4.1 Telemedicine for the Family Doctor ............................................ 83
   Kurzynski, M.W. (Wrocław)

4.2 Teleradiology ............................................................................. 87
   Voellmy, D.R.; Marincek, B. (Zürich)

4.3 Telemedicine Applications in Surgery .......................................... 94
   Demartines, N. (Zürich)

4.4 Modern Telepathology: A Distributed System with
   Open Standards ........................................................................ 102
   Oberholzer, M.; Christen, H. (Basel); Haroske, G. (Dresden);
   Helfrich, M. (Zweibrücken); Oberli, H. (Honiara); Jundt, G. (Basel);
   Stauch, G. (Aurich); Mihatsch, M.; Brauchli, K. (Basel)

4.5 Telecardiology ............................................................................ 115
   Zeevi, B. (Schaffhausen)

4.6 Telemedicine in Oncology ......................................................... 121
   Olver, I. (Adelaide, S.A.)
4.7 Telemedicine in Ophthalmology .......................................................... 127
    Hammack, G.G. (Galveston, Tex.)

4.8 Implementation of a Telepsychiatric Network in Northern Finland ............ 132
    Mielonen, M.-L.; Väisänen, L.; Moring, J.; Ohinmaa, A.; Isohanni, M. (Oulu)

4.9 Telemedicine and Real-Time Monitoring of Climbers .............................. 141
    Satava, R.M. (New Haven, Conn.)

4.10 Telemedicine in Corrections .............................................................. 148
    Hammack, G.G. (Galveston, Tex.)

5 Teledermatology

5.1 Teledermatology in Clinical Use

5.1.1 Dermamat® – A Tailor-Made Tool for Teledermatology ......................... 154
    Kühnis, L.; Milesi, L. (Reinach)

5.1.2 Aspects of Quality: Face-to-Face versus Teleconsulting ....................... 158
    Granlund, H. (Helsinki)

5.1.3 Teledermatology in the Nursing Home .............................................. 167
    Zelickson, B.D. (Minneapolis, Minn.)

5.1.4 A Survey among Dermatologists in Practice about Teledermatology ........ 172
    Glaessl, A.; Coras, B.; Popal, H.; Landthaler, M. (Regensburg); Stolz, W. (Munich)

5.2 Teledermatology-Teaching

5.2.1 Dermatology Online with Interactive Technology (DOIT) ..................... 176
    Bader, U. (Zumikon); Cipolat, C.; Burg, G. (Zürich)

5.2.2 Telematics-Based Teaching in Dermatology ....................................... 182
    Böhm, K. (Mainz); Wiegers, W. (Darmstadt)

5.2.3 Image Archives, Audio- and Video-Sequences for Teleteaching ............... 191
    Höhn, H.; Esser, W.; Hamm, H.; Albert, J. (Würzburg)

5.2.4 Dermatology Course 2000: An Interactive Multimedia Dermatology Course for Students
    Programme Description and First Results ............................................. 195
    Stolz, W.; Roesch, A.; Popal, H. (Regensburg); Arnold, N. (Hamburg);
    Gruber, H. (Regensburg); Burgdorf, W. (Munich); Landthaler, M. (Regensburg)

5.3 Teledermatopathology

5.3.1 Teledermoscopy .............................................................................. 201
    Braun, R.P.; Saurat, J.-H. (Geneva)
5.3.2 Teledermatoscopy in Daily Routine – Results of the First 100 Cases ................................................................................................................................. 207
Coras, B.; Glaessl, A. (Regensburg); Kinateder, J. (Bayreuth);
Klövekorn, W. (Gilching); Braun, R. (Geneva); Lepski, U.;
Landthaler, M. (Regensburg); Stolz, W. (Munich)

5.3.3 HistoClinC: A Web-Based Teledermicine Application for Clinicopathologic Correlations in Dermatopathology .................................................. 213
Kempf, W.; Reichlin, S.; Burg, G. (Zürich)

6 Global Telemedicine

6.1 Teledermatology in North America .......................................................... 222
Pak, H. (San Antonio, Tex.)

6.2 Telemedicine Experience in North America .......................................... 226
Qureshi, A.A.; Kvedar, J.C. (Boston, Mass.)

6.3 Teledermatology in Sub-Saharan Africa ................................................. 233
Schmid-Grendelmeier, P.; Doe, P.; Pakenham-Walsh, N. (Zürich)

6.4 Telemedicine in Europe ........................................................................... 247
Kropf, R.; Cipolat, C.; Burg, G. (Zürich)

6.5 Telemedicine in Germany ......................................................................... 252
Tittelbach, J.; Elsner, P. (Jena)

6.6 Teledermatology in Switzerland .............................................................. 257
Cipolat, C. (Zürich); Bader, U. (Zumikon); Rufli, T. (Basel); Burg, G. (Zürich)

Preface

Telemedicine holds great potential to revolutionize medical and paramedical services, not only for primary care physicians in remote areas but also for teaching students and for continuous medical education.

In the future, consulting and asking for second opinions will be the gold standard of medical care. Disease monitoring will become another telemedical application for patients with heart disease, metabolic diseases, and high blood pressure, etc.

Depending on the local requirements and geographical distribution of the partners in a telemedical network, different logistics may be implemented, including real-time, store-and-forward or other hybrid technologies. The implementation of these modern forms of healthcare will probably not save costs, but rather offer better healthcare at the same price. The reliability of telemedical procedures and the cost-effectiveness of face-to-face vs. telemedical care will have to be compared and evaluated by appropriate studies.

The term e-health only poorly defines the nearly unlimited number of communication procedures and technologies ranging from telephone and fax through e-mail and digital data transmission of any kind of information in the healthcare market, including telemedicine. Telemedicine, however, refers to a more stringent definition of e-health. Telemedicine is defined by the World Health Organization (WHO) as ‘the practice of healthcare using interactive audio, visual and data communications. This includes healthcare delivery, diagnoses, consultation and treatment as well as education and transfer of medical data’.

Considering this definition, those medical disciplines that rely heavily on imaging techniques are suited especially well for telemedicine, namely radiology
and related disciplines such as surgery and orthopaedics, pathology, dermatology, telecardiology, diabetology, neurology, oncology, otorhinolaryngology, ophthalmology, psychiatry, and many other specialities.

This book covers part of the broad spectrum of telemedical applications with special emphasis on teledermatology. The articles were kept relatively short so that various aspects could be covered, including technology, teleteaching, teleconsulting relating to legal, ethical and consumer aspects, and the fields of application in the context of various disciplines. Each article provides a brief overview rather than comprehensive information on details.

Telemedicine will certainly add a new dimension to the medical and paramedical healthcare services. Quality will be improved without saving direct costs. However, indirect costs such as time and effort for the patient will be reduced, providing a tremendous benefit for the patient in a modern healthcare system.

Telemedicine still encounters some resistance on various frontiers, including physicians, patients, the general population, politicians, insurance companies and healthcare providers. The evolutionary process, however, will proceed. There is no doubt that within 3–5 years, telemedicine will be an established part of modern healthcare.

I wish to thank the contributors to this volume, to the publishers for their excellent cooperation. My thanks are also due to Mrs. Susanna Ludwig and Mrs. Liza Anyawike of S. Karger Publishers for their help and courtesy.

_Günter Burg, MD, Zürich_
