Erratum

It has come to our knowledge that in the article ‘Comparable Efficacy of Pantoprazole and Omeprazole in Patients with Moderate to Severe Reflux Esophagitis. Results of a Multi-
national Study’ by Körner et al. (Digestion 2003;67:6–13), published in the last issue of Digestion, the legends of figure 1 and 2 were erroneously interchanged. They should read as follows:

Fig. 1. Healing rates of GERD grade II/III after 4 and 8 weeks of treatment with 40 mg pantoprazole or 40 mg omeprazole MUPS.

Fig. 2. Study populations and patient flowchart.
