Single topic volume

Molecular Aspects of Mouse Spermatogenesis

Editor
Ricardo Benavente, Würzburg

68 figures, 14 in color, and 14 tables, 2003
Drug Dosage
The authors and the publisher have exerted every effort to ensure that drug selection and dosage set forth in this text are in accord with current recommendations and practice at the time of publication. However, in view of ongoing research, changes in government regulations, and the constant flow of information relating to drug therapy and drug reactions, the reader is urged to check the package insert for each drug for any change in indications and dosage and for added warnings and precautions. This is particularly important when the recommended agent is a new and/or infrequently employed drug.

Cover illustration
Picture of a seminiferous tubule taken from an original slide prepared by Camillo Golgi (1843–1926). Photographed by Carlo A. Redi and Silvia Garagna (University of Pavia, Italy).
Contents

209 Foreword
   Benavente R

210 Pathways of post-transcriptional gene regulation in mammalian germ cell development
   Elliott D

217 Patterns, mechanisms, and functions of translation regulation in mammalian spermatogenic cells
   Kleene KC

225 Chromatin dynamics in the male meiotic prophase
   Baarends WM, Grootegoed JA

235 Knockout mice provide novel insights into meiotic chromosome and telomere dynamics
   Scherthan H

245 Molecular aspects of XY body formation
   Hoyer-Fender S

256 Insights into regulation of the mammalian cell cycle from studies on spermatogenesis using genetic approaches in animal models
   Wolgemuth DJ

267 Specific arrests of spermatogenesis in genetically modified and mutant mice
   de Rooij DG, de Boer P

277 Temporal expression of cell cycle-related proteins during spermatogenesis: establishing a timeline for onset of the meiotic divisions
   Inselman A, Eaker S, Handel MA

285 Prion proteins and infertility: insight from mouse models
   Genoud N, Behrens A, Arrighi I, Aguzzi A

290 LIM-kinase as a regulator of actin dynamics in spermatogenesis
   Takahashi H, Funakoshi H, Nakamura T

299 The androgen receptor in spermatogenesis

302 The role of N-glycans in spermatogenesis
   Fukuda MN, Akama TO

307 Histone H1t is not replaced by H1.1 or H1.2 in pachytene spermatocytes or spermatids of H1t-deficient mice
   Drabant B, Benavente R, Hoyer-Fender S
Synergistic effects of germ cell expressed genes on male fertility in mice
Nayernia K, Meinhardt A, Drabent B, Adham IM, Müller C, Steckel M, Sancken U, Engel W

Meiotic recombination and spermatogenic impairment in Mus musculus domesticus carrying multiple simple Robertsonian translocations
Merico V, Pigozzi MI, Esposito A, Merani MS, Garagna S

Does Rbmy have a role in sperm development in mice?
Szot M, Grigoriev V, Mahadevaiah SK, Ojarikre OA, Tour A, von Glasenapp E, Rattigan Á, Turner JMA, Elliott DJ, Burgoyne PS

The actin-based motor myosin Va is a component of the acroplaxome, an acrosome-nuclear envelope junctional plate, and of manchette-associated vesicles
Kierszenbaum AL, Rivkin E, Tres LL

Expression of the B56γ subunit of protein phosphatase 2A and Mea1 in mouse spermatogenesis. Identification of a new B56γ subunit (B56γ4) specifically expressed in testis
Ortega-Lázaro JC, del Mazo J

Inhibition of lactate dehydrogenase C4 (LDH-C4) blocks capacitation of mouse sperm in vitro
Duan C, Goldberg E

Expression of peroxisomal proteins provides clear evidence for the presence of peroxisomes in the male germ cell line GC1spg
Lüers GH, Schad A, Fahimi HD, Vökl A, Seitz J
