Subject Index

Adolescent pregnancy
  breast milk quality 218
  menarche, nutrition effects 213, 214
  outcomes
    dietary influences 214, 215
    iron deficiency effects 215
    nutritional intervention 215, 216, 218–220
  overview 214, 218, 219
  protein and energy requirements in adolescence 213, 217, 218

Allergy
  antigen removal in foods 233
  cesarean section risks 231
  cytokines and functions 221, 223
  fetal immune response 224, 225
  genetic susceptibility 221, 222
  incidence trends 221
  γ-linolenic acid prevention 233
  long-chain fatty acid deficiency effects in late life 115–118
  maternal restriction diet effects on babies 14
  pregnancy interventions for prevention in offspring
    breast feeding 232
    cytokine targeting 229
    hypoallergenic formulas 231–234
    inhalant allergen avoidance 225, 226
    levels of prevention 222
    measures 232
  n-3 fatty acids 227, 228
  probiotics 228, 233
  restriction diets 224–227, 231
  T-helper cell balance 222, 223
  risk factors 225
  Anemia, micronutrient deficiencies 236, 237
  Arginine, supplementation studies in pregnancy 75, 76, 79, 81
  Basal metabolic rate (BMR), pregnancy changes 53, 55, 68
  BMR, see Basal metabolic rate
  Breast feeding
    adolescent milk quality 218
    essential fatty acid supplementation studies in pregnancy and lactation 92, 93, 97, 98
    interleukin-7 levels in breast milk 157, 158, 166
    obese mothers 207, 211
  β-Carotene
    food sources 78
    supplementation studies in pregnancy 78, 79
  Cesarean section, allergy risks 231
  CHD, see Coronary heart disease
  Cleft palate
    folate prevention 41, 42
    maternal obesity effects 202
Subject Index

Copper-zinc interactions 239–241
Coronary heart disease (CHD)
Dutch famine survivor study
biases 194, 195
cohort 184, 185
diabetes incidence 193
follow-up prospects 189, 190
maternal, birth, and adult characteristics 185–187
overview 183, 184
prenatal exposure timing to famine effects 186–189, 194
twins 189–193
epidemiology in India 169
fetal origins hypothesis 183, 190

DHA, see Docosahexaenoic acid
Diabetes type II, see also Metabolic syndrome
birth size and body composition risks in future development
birth size studies 173–175
corrections for current obesity in fetal origins studies 173
gender differences 171
indices 170
malnutrition prevention effort impact 178, 179
maternal nutrition and offspring risk 176
parental size and nutrition effects on birth weight 175, 177
protein intake effects 181
Pune maternal nutrition study 171–173, 176
size versus intrauterine growth 171
vitamin B12 status 179, 180, 182
Dutch famine survivors 193
fetal origins hypothesis 176, 177
γ-linolenic acid maternal deficiency and risks in offspring 91, 92
thrifty phenotype hypothesis 169, 175
Docosahexaenoic acid (DHA), see also Essential fatty acids
biosynthetic defects in intrauterine growth restriction 125–127, 135
gene expression regulation 111, 112
lipid membrane property effects 106, 107
maternal status effects on offspring 90, 91, 93, 96, 97, 99
metabolism 103–105
safety of supplementation 135, 136
Dutch famine, see Coronary heart disease

Energy
adolescent pregnancy requirements 213, 217, 218
deposition estimation from fat and protein accretion 51–53
expenditure changes during pregnancy adaptations 60–62
basal metabolic rate 53, 55, 68
total energy expenditure 55
gestational weight gain recommendations 50, 51
maternal diet and fetal outcome 6, 7, 12–14
pregnancy requirements estimation 55, 58, 60
fetal consequences of deviations 62, 63, 65, 68
fetal gender effects 67
overview 49, 50
supplementation trials 69, 70

Essential fatty acids
classification 83
deficiency markers 84
docosahexaenoic acid maternal status effects on offspring 90, 91, 93, 96, 97, 99
fetal status 85, 86
γ-linolenic acid deficiency and diabetes type II risks in offspring 91, 92, 98
long-chain fatty acids
deficiency effects birth weight 88–90
head circumference 90
hypoxia-reperfusion injury 123–125
later neurodevelopment 90, 91
postpartum depression 88
pregnancy-induced hypertension 88
preterm delivery 88
functions 101, 102
habitual fatty acid intake and maternal status 86, 87
infant dietary sources 105, 106
long-term effects of infant consumption
allergy and inflammation 115–118

• eicosanoid and docosanoid production 112
gene expression 108–112
growth and body composition 114, 115
lipid membrane properties 106–108
metabolic syndrome 125–127
neurologic and sensory development 118–123
maternal status 84, 85
metabolism 84, 101, 103–105
nomenclature and chemistry 102, 103

• n-3 fatty acids in allergy prevention 227, 228
supplementation studies in pregnancy and lactation 92, 93, 97, 98

Fatty acids, see Essential fatty acids
Fish oil, Trans fatty acids
Fish oil, effects in pregnancy 13

Folic acid
deficiency monitoring 45
embryogenesis functions
cleft defect prevention 41, 42
developmental defects in deficiency 30, 31
neural tube defect mechanisms 46, 47
overview 29, 30
supplementation rescue of embryos 31
fetal transport 43, 45
iron interactions 237, 238
vitamin A interactions 36

Gestational diabetes
birth defects 207, 209
diabetes risks postpartum 210
fetal effects 24
screening 210

Gestational weight gain (GWG)
gestational duration effects 70
obese women and birth defects 208
recommendations 50, 51
GLA, see γ-Linolenic acid
GWG, see Gestational weight gain

Homocysteine
folate deficiency correlation 31, 40

teratogenicity 31

• Hydrocephaly, maternal obesity effects 202
Hypoallergenic formulas, allergy prevention 231–234
Hypoxia reperfusion injury, long-chain fatty acid deficiency effects 123–125

IL-7, see Interleukin-7

Immune function
allergy, see Allergy
infant development and nutrition
interleukin-7 levels in breast milk 157, 158, 166
study design 155, 156
thymic size and body weight 156, 157, 166
maternal malnutrition effects on offspring
epidemiology studies 153–155, 165, 167
long-term programming evidence 159–161
placental development and physiology 158, 159
thymic function 158
vaccine response 159–161, 164
relation to birth weight, season of birth, and maternal supplementation status 159–161, 164, 165
Infection, see Immune function
Insulin resistance, see Metabolic syndrome

Interleukin-7 (IL-7), levels in breast milk 157, 158, 166
Intrauterine growth restriction (IUGR)
docosahexaenoic acid biosynthetic defects 125–127, 135
maternal nutritional effects, epidemiology studies
anthropometry 5, 6
energy and protein intake 6, 7, 12–14
micronutrient intake 7, 8
nitric oxide studies 74–76, 79
trends in Canada 4

Iodine, embryogenesis functions
overview 29, 30, 35, 36
thyroid hormone functions 35, 36, 43

Iron
deficiency effects in adolescent pregnancy 215
Iron (continued)
folate interactions 237, 238
infection risks 246
zinc interactions 241–243, 245
IUGR, see Intrauterine growth restriction

Lactation, see Breast feeding
Large for gestational age (LGA)
maternal nutritional effects,
edemiology studies
anthropometry 5, 6
energy and protein intake 6, 7,
12–14
micronutrient intake 7, 8
trends in Canada 4
LBW, see Low birth weight
LGA, see Large for gestational age
γ-Linolenic acid (GLA)
allergy prevention 233
deficiency and diabetes type II risks in
offspring 91, 92, 98
Lipoic acid, supplementation studies in
pregnancy 81, 82
Low birth weight (LBW)
definition 2, 11
maternal nutritional effects,
edemiology studies
anthropometry 5, 6
energy and protein intake 6, 7,
12–14
micronutrient intake 7, 8
preterm birth relationship in Canada
2, 3

Metabolic syndrome
developmental processes and disease
risks
embryonic and fetal period 18, 19
postnatal factors 19, 20
evolutionary perspective 22–24
long-chain fatty acid deficiency effects
in later life 125–127
metabolic programming
fetus 137, 138
infants 138
rat ‘Pup-in-a-Cup’ model using
high-carbohydrate milk
adult-onset metabolic
adaptations 140, 141
eyearly metabolic adaptations
139, 140
generational duration of effects
148
glucose levels 147
human significance 145, 146,
148
hyperinsulinemia versus insulin
resistance 149, 150
maternal hyperinsulinemia role
in metabolic programming
141–145
milk formulations 149, 151
overview 138, 139
molecular mechanisms 20, 21
predictive adaptive response model
23–25
transgenerational effects 21
trends 17

Neural tube defect (NTD)
folate deficiency 30, 31
maternal obesity effects 202, 208, 209
mechanisms 46, 47
Nitric oxide (NO), fetal growth
restriction studies 74–76, 79
NO, see Nitric oxide
NTD, see Neural tube defect

Obesity, see also Metabolic syndrome
behavior modification for children
207, 208
breast feeding by obese mothers 207,
211
fat distribution and health risks 204,
205
maternal effects
fetal outcomes
birth defects 201–203, 208–210
preterm birth 201
small for gestational age 200,
201
stillbirth 200
pregnancy complications 199,
200
reproductive function 198, 199
measurement in epidemiology studies
197, 198, 203, 204
westernization of Asian countries
205
Omphalocele, maternal obesity effects
202, 203
ORAC, see Oxygen radical absorbance
assay
Oxygen radical absorbance assay (ORAC), antioxidant status changes during pregnancy 77

Peroxisome proliferator-activated receptor (PPAR) activation 110
fatty acid effects on transcription 109–111
isoforms 111

Physical activity level, maternal effects on pregnancy outcome 68, 69
Postpartum depression, long-chain fatty acid deficiency effects 88

PPAR, see Peroxisome proliferator-activated receptor

Predictive adaptive response model, metabolic syndrome formation and implications 23–25

Preterm birth epidemiology in Canada 2, 3
long-chain fatty acid deficiency effects 88
maternal nutritional effects, epidemiology studies anthrometry 5, 6
energy and protein intake 6, 7, 12–14
micronutrient intake 7, 8
maternal obesity effects 201

Probiotics, allergy prevention 228, 233
Prolactin, zinc deficiency and hyperprolactinemia 247

Protein adolescent pregnancy requirements 213, 217, 218
maternal diet and fetal outcome 6, 7, 12–14
maternal status and later diabetes type II risks 181

‘Pup-in-a-Cup’ model, see Metabolic syndrome

Rat ‘Pup-in-a-Cup’ model, see Metabolic syndrome

Restriction diets, allergy prevention 224–227, 231
Retinoic acid-binding proteins, embryogenesis role 33
Retinoic acid receptors, embryogenesis role 33

Retinol-binding proteins, embryogenesis role 32, 33

SGA, see Small for gestational age
Small for gestational age (SGA) definition 2, 11, 12
maternal nutritional effects, epidemiology studies anthropometry 5, 6
energy and protein intake 6, 7, 12–14
micronutrient intake 7, 8
maternal obesity effects 200, 201
trends in Canada 4
Syndrome X, see Metabolic syndrome

TBK, see Total body potassium
TEE, see Total energy expenditure
Teenage pregnancy, see Adolescent pregnancy
Thyroid hormone embryogenesis functions 35, 36, 43
vitamin A interactions 36, 37
Total body potassium (TBK), pregnancy changes 51, 53
Total energy expenditure (TEE), pregnancy changes 55
Trans fatty acids, maternal diet effects on offspring 93, 94

Vitamin A
anemia from deficiency 236
embryogenesis functions β-carotene supplementation studies 44
developmental defect mechanisms deficiency 33, 34, 44
excess 34, 35, 41
interactions folate 36
thyroid hormone 36, 37
overview 29–33
metabolism 33
retinoic acid-binding proteins 33
retinoic acid receptors 33
retinol-binding proteins 32, 33
zinc interactions 238, 239

Vitamin B12
deficiency anemia 236, 237
effects on embryos 40, 41
monitoring 45
