Human
Hematopoietic
Colonies in
Health and Disease

Catherine Nissen-Druey, Basel
André Tichelli, Basel
Sandrine Meyer-Monard, Basel

230 figures, 229 in color, and 10 tables, 2005
This atlas is dedicated to **Norman Iscove**, who elaborated biological conditions that stimulated erythroid precursor cell colony formation. Every bright red ‘burst’ in a culture reminds us of Norman’s knowledge, wisdom and sense of humor.
Contents

1 Introduction
1.1 Aims of the atlas
1.2 Background
1.3 The contribution of cultures in modern hematology
1.4 Limitations of precursor cell cultures

2 Culture techniques
2.1 Laboratory equipment and materials
2.2 Culture media
2.3 Cell suspensions
2.4 Optimal number of cells in culture
2.5 Plating and incubation
2.6 Reading of cultures

3 Normality and abnormality in culture
3.1 Normal colonies
3.1.1 CFU-G: Neutrophil granulocyte colonies
3.1.2 CFU-M and CFU-GM: Macrophage and granulocyte-macrophage colonies
3.1.3 CFU-Eo: Eosinophil colonies
3.1.4 BFU-E and CFU-E: Large and small erythroid colonies
3.1.5 CFU-GEMM: Mixed colonies containing neutrophil granulocytes, erythroblasts, macrophages and megakaryocytes
3.1.6 CFU Eo/Ec: Colonies containing eosinophils and erythroblasts
3.1.7 Normal colony numbers, PB:BM ratio and Erythroid:Myeloid ratio

3.2 Deviations from normality
3.2.1 Grossly reduced colony growth
3.2.2 Strongly increased colony growth
3.2.2.1 with normal PB:BM ratio
3.2.2.2 with high PB:BM ratio
3.2.3 Low erythroid:myeloid ratio
3.2.4 Increased CFU-M
3.2.5 Increased CFU-Eo
3.2.6 Increased CFU-GEMM and CFU-Eo/Ec
3.2.7 Deficient hemoglobinization
3.2.8 Epo-independent BFU-E
3.2.9 Abnormally small colonies
  3.2.9.1 Abnormally small CFU-G
  3.2.9.2 Abnormally small CFU-M
  3.2.9.3 Abnormally small BFU-E
3.2.10 Dendritic cell-like clusters
3.2.11 Agglutinated red cells and platelets
  3.2.11.1 Agglutinated red cells
  3.2.11.2 Agglutinated platelets
3.2.12 Scattered macrophages
3.2.13 Noncellular artifacts
  3.2.13.1 Artifacts from methylcellulose powder
  3.2.13.2 Artifacts from FCS
3.2.14 Infectious contaminations
3.2.15 Lack of incubator humidity

4 Contribution of cultures to clinical hematology

4.1 Differential diagnosis of cytopenic disorders
4.1.1 Guidelines from culture observation to diagnosis
4.1.2 Aplastic anemia
4.1.3 Myelodysplastic syndrome
4.1.4 Acute myeloid leukemia
4.1.5 Vitamin B₁₂/folate deficiency
4.1.6 Agranulocytosis
4.1.7 Immune thrombocytopenia
4.1.8 Pure red cell aplasia
4.1.9 Severe GvHD

4.2 Differential diagnosis of hyperproliferative disorders
4.2.1 Neutrophilia, polycythemia, thrombocytosis
  4.2.1.1 Guide from culture observation to diagnosis
  4.2.1.2 PV and ET
  4.2.1.3 Idiopathic myelofibrosis
  4.2.1.4 Chronic myeloid leukemia
  4.2.1.5 Gleevec effects
4.2.2 Eosinophilia
  4.2.2.1 Guide from culture observation to diagnosis
  4.2.2.2 Reactive eosinophilia and hypereosinophilic syndrome
4.2.3 Monocytosis
  4.2.3.1 Guide from culture observation to diagnosis
  4.2.3.2 Reactive monocytosis and CMML
