A topical and comprehensive description of current developments
in the pharmacological treatment of anxiety disorders

Anxiety Disorders

Editors

**David S. Baldwin
Brian E. Leonard**

Anxiety disorders are not uncommon and are often 'comorbid' with other forms of mental disorders. This publication provides an update on the origins and the causes of anxiety disorders and their related symptoms. Its focus is on neuroimaging and neuroinflammation and genetics as well as areas where an overlap may exist with abnormal cardiovascular physiology. Further it takes a closer look at the early phases of anxiety disorder and the potential effects of prolonged illness prior to diagnosis and also investigates recent research findings about the neuroimmunology of depression and the immunomodulatory effects of antidepressants. It also examines the neuroinflammatory hypothesis about anxiety disorders and concludes with the succinct but evidence-based and comprehensive reports on the value of pharmacological treatments used for generalized anxiety disorder, panic disorder, social anxiety disorder, posttraumatic stress disorder and obsessive-compulsive disorder.

The topics covered in this publication will certainly make it essential reading for both novice and expert practitioners in psychiatric medicine, but its appeal should extend even further and include those researching the neuropsychobiology of anxiety or trying to improve our grasp of posttraumatic stress disorder or obsessive-compulsive disorder.

Modern Trends in Pharmacopsychiatry

Series Editor: **Leonard, B.E.** (Galway)
ISSN 1662-2685 / e-ISSN 1662-4505

Focussing on the effects of drug treatment on psychiatric and neurological disorders, this series is concerned with the mechanisms of action of psychotropic drugs, their adverse effects as well as the science and experience behind the development of new compounds. On the basis of our growing understanding of the interaction between physical ill health and psychiatric illness, *Modern Trends in Pharmacopsychiatry* also investigates the biological and psychological factors that may impact on a patient's response to psychotropic treatment. Written by international experts who have contributed to the advances in the field of pharmacopsychiatry, this series provides cutting-edge research and clinical information, including the latest developments, methods and limitations of current clinical trials.
