Extraordinary insights into an ordinary pathology

Actinic Keratosis

Editors:
H. Peter Soyer
Tarl W. Prow
Gregor B.E. Jemec

In some respects actinic keratosis is the most common and best-known pathology in dermatology. Being such an ordinary pathology, actinic keratosis gives nevertheless insight into an extraordinary number of important biological and clinical processes. Actinic keratoses are found in significant numbers on the sun-exposed skin of Caucasians, especially those living in sun-bathed countries such as Australia, as two of the editors and a considerable number of the authors of this book do.

The authors who have contributed to this volume are researchers and clinicians discussing actinic keratoses across the whole spectrum — from epidemiology to immunology, from molecular biology to behavioral psychology — and of course pathologists and clinicians dealing with patients who experience the many manifestations of actinic keratoses. The fact that all these various aspects are considered renders this book valuable reading for scientists and clinicians alike.

Current Problems in Dermatology

Series Editors: Itin, P. (Basel), Jemec, G.B.E. (Roskilde)
ISSN 1421–5721 / e-ISSN 1662–2944

This series presents a selection of new ideas and information in the field of clinical and investigative dermatology. Crossing the borders of skin diseases it explores interdisciplinary strategies, linking dermatology with immunology, allergology and other research areas. Each volume is individually designed to provide an up-to-date presentation of new and interesting topics in dermatology and skin research. The contributing authors are acknowledged experts in their fields. The wide range of topics discussed includes normal and pathological skin conditions, the development of new equipment, drugs and analytical techniques, and recent advances in the treatments that can be offered to patients.
