A review of established and emerging methods

From Auto- to Allotransplantation

Editors: Fu-Chan Wei  
Hui-Yun Cheng  
Cheng-Hung Lin

This unique publication was written by experts who have made significant contributions to the development of reconstructive microsurgery and vascularized composite allotransplantation. The book is divided into three major sections. The first presents the state of the art of autologous microsurgical reconstruction. It summarizes current achievements, highlights the shortcomings of currently available techniques, and prepares the reader for the next evolutionary step: allotransplantation. Section two is a comprehensive review of allotransplantation, from immunology to surgical techniques. Finally, for those interested in establishing a comprehensive center for vascularized composite allotransplantation, section three provides important lessons from the successful Chang Gung Vascularized Composite Allotransplantation Center.

From Auto- to Allotransplantation is indeed the only up-to-date and complete reference available on the topic. Scholars and research fellows interested in transplantation will benefit greatly from this work. It is also an invaluable resource for plastic, orthopedic, hand, ENT, oromaxillofacial, and general surgeons as well as for residents.
Dear Librarian,

I have reviewed Translational Research in Biomedicine, Vol. 3 and would like to recommend it for your library.
