Pediatric Neurosurgery

Focused and independent discussions on pediatric neurosurgery

Pediatric Neurosurgery publishes new information and observations in pediatric neurosurgery, neurology, neuroradiology, and neuropathology. The focus is on the etiology of neurological diseases, the operative care of affected patients, and outcomes research. In addition to experimental and clinical studies, the journal presents critical reviews on selected topics as well as case histories and reports on advances in surgical technique. This thought-provoking approach encourages the dissemination of information from neurosurgeons and neuroscientists around the world. Published materials are of interest to both researchers and clinicians who study and care for patients with pediatric, congenital, and developmental diseases of the nervous system.
