A Timely Overview of Commonly Performed Endovascular Procedures

Contents

Current and Future Management Strategies for Intracranial Aneurysm and Carotid Artery Stenosis: Deshaies, E.M.; Boulos, A.S.
The Use of Stents in the Management of Neurovascular Disease: A Historical and Present Status Review: Horowitz, M.B.; Purdy, P.D.
Carotid Angioplasty with Stenting and Carotid Endarterectomy: Both Are Here to Stay: Hanel, R.A.; Levy, E.I.; Guterman, L.R.; Hopkins, L.N.
Angioplasty for Repair of Intracranial Arterial Stenosis: Ringer, A.J.
Management of Arteriovenous Malformations Using Liquid Agents: Ozgur, B.M.; Levy, D.J.
Treatment of Dural Arteriovenous Fistulae: Feng, L.; Meyers, P.M.; Higashida, R.T.
Tumor Embolization: Levy, E.I.; Spiro, R.; Horowitz, M.B.; Hanel, R.
Acute and Chronic Venous Sinus Thrombosis: Horowitz, M.B.; Greenlee, R.G., Jr.; Jungreis, C.A.; Purdy, P.D.
Petrosal Sinus Sampling for Cushing's Disease: Horowitz, M.B.; Levy, E.I.; Genevro, J.; Kassam, A. Burguetara, B.

Over the past decades many surgical subspecialties have moved from traditionally open procedures towards minimally invasive approaches. With the advent of improved technology and smaller more maneuverable devices more delicate procedures have been developed. In this volume the most common neuroendovascular procedures currently practiced are discussed. Topics include management of intracranial aneurysms, arteriovenous malformations, tumors, intracranial and extracranial arterial stenoses, and arterial fistulas. This publication provides neurosurgeons, radiologists, neurologists, and trial lawyers with a concise reference that explains the background, as well as indications, and techniques for performing the most common neuroendovascular procedures.

Fields of Interest: Neurology; Neurosurgery; Radiology; Surgery, Jurisprudence
Progress in Neurological Surgery

Series Editor: L. Dade Lunsford
ISSN 0079–6492

Published since 1966, this series has become universally recognized as the most significant group of books serving neurological surgeons. Volumes feature contributions from distinguished international surgeons, who brilliantly review the literature from the perspective of their own personal experience. The result is a series of works providing critical distillations of developments of central importance to the theory and practice of neurological surgery.
