New York Study Shows that Tattoo Artists Are First-Line Responders to Skin Health Concerns as well as Tattoo Complications, More Training Desired

Tattoo artists frequently encounter adverse tattoo events according to a New York University Department of Dermatology study, published this month in the Karger journal *Dermatology*.

“We know that people often turn to tattoo artists before medical professionals with adverse tattoo reactions,” says principal investigator Marie Leger, who in July will become an Assistant Professor of Dermatology at Weill Cornell Medical College. “So we decided that it was important to assess what tattooists are seeing and how they are responding.”

The researchers surveyed 90 licensed tattoo artists in New York City. 92.8 % of those surveyed reported observing at least one adverse tattoo reaction during their careers, most often color-specific reactions, allergies, or abnormal healing.

About half of the tattoo artists reported receiving formal training about skin conditions related to tattoos. Those who received prior training were more likely to provide written aftercare instructions, ask clients about preexisting skin conditions, and look for atypical moles. They were also more likely to report being confident about managing adverse tattoo reactions and advising clients on the risks of getting a tattoo with a history of a preexisting skin condition.

“We think this study shows that there is a lot of collaborative potential between tattoo artists and physicians. Tattooists are often the ‘first-line responders,’ when something goes wrong with a tattoo, and there is clearly an interest in more education,” Leger reports.

The researchers also emphasize that tattooists see many people who may not have access to a dermatologist. Training tattoo artists to recognize atypical moles and suspicious lesions may be an additional tool to promote skin cancer screening in their opinion.

The article "Skin Care in the Tattoo Parlor: A Survey of Tattoo Artists in New York City" is available free-of-charge, including supplementary material, on the homepage of *Dermatology*, as an Online First Article.

Dermatology

Published continuously since 1893, the journal [Dermatology](#) provides a worldwide survey of clinical and investigative dermatology. Covering progress in research as well as clinical dermatology and therapy, the journal enjoys a high scientific reputation.

Karger Publishers

Karger Publishers in Basel, Switzerland, is a globally active medical and scientific publishing company. Independent and family-run in the fourth generation by Gabriella Karger, the company is dedicated to serving the information needs of the scientific community with publications of high-quality content, covering all fields of medical science.
