The Karger Topic Article Package is a new customer-orientated product that presents preselected journal articles and book chapters from the entire range of the Karger publishing program. Selections are made using brand-new technology that combines the strengths of computer technology with human judgment in automatic subject classification.

Karger publishes more than 100 peer-reviewed medical and scientific journals as well as some 50 new books every year. The use of artificial intelligence and automation paired with Karger's knowledge and expertise enables us to achieve and maintain a high level of relevance for our Topic Article Packages.

- Very specific thematic packages
- New format: contents (chapters and articles) of all Karger books and journals
- New: UNSILO Technology for automated text intelligence + UNSILO Classify
- Quick and easy way to relevant articles in your field
- Log on to [www.karger.com/tap](http://www.karger.com/tap)

Please contact us with your requirements and ideas and let us help you create the one Topic Article Package for you.

Notes on our publication program 2018/2019

The range of Karger Open Access, online-only journals will be broadened further in 2019 with the addition of three new journals: Case Reports in Clinical Nutrition, Dubai Medical Journal and International Journal of Diabetes and Metabolism.

The Journal of Innate Immunity will switch to Open Access in 2019.

The journals Aesthetics in Dermatology and Surgery, Annals of Neurosciences, Food Science and Technology Research, Integrative Medicine International, Nephron Extra and Neurosignals have ceased publication.

For further information please refer to the comprehensive entries on our home page www.karger.com
Founded in 1957, *Acta Cytologica* was the first and, for decades, the only cytopathology journal. As the official journal of the International Academy of Cytology and affiliated to nearly 50 national cytology societies around the world, it remains the only truly international journal in the field. This makes *Acta Cytologica* unique in its global coverage and geographically representative submissions. With the published original studies, reviews, meta-analyses, carefully selected case reports, and letters to the editor which maintain a good balance between clinical cytology and cytopathology, *Acta Cytologica* fosters the understanding of the pathogenetic mechanisms behind cytomorphology. The journal thus facilitating the translation of cutting-edge research into clinical practice. *Acta Cytologica* covers topics from diagnostic cytopathology, gynecologic and nongynecologic cytopathology to fine needle aspiration, molecular techniques and their diagnostic applications, thus addressing a multidisciplinary audience, far beyond the practicing cytopathologists and cytologists.

*Acta Cytologica*

Acta Haematologica is a well-established and internationally recognized clinically-oriented journal with a prominent Editorial Board featuring balanced, wide-ranging coverage of current hematology research. It contains a wealth of information on such problems as anemia, blood coagulation abnormalities, acute and chronic leukemias, Hodgkin and non-Hodgkin lymphomas, multiple myeloma and paraproteinemias as well as rare and hereditary hematological disorders. The journal features first-rate basic and clinical original papers, some of which are accompanied by editorial commentaries by eminent experts. These original articles are supplemented by short state-of-the-art communications, reviews and correspondences as well as case reports and meta-analyses. The journal has been and will always be committed to bring to its readers cutting edge clinical information, including the different aspects of hematology, alongside translational research relevant to clinical daily life, thus keeping the practicing hematologist well informed of the new developments in the field of benign as well as malignant hematology.

The American Journal of Nephrology is a peer-reviewed journal that focuses on timely topics in both basic science and clinical research. Papers are divided into several sections, including:

- Original reports, spanning clinical, basic and outcomes research
- In-depth topic reviews on specific topics selected by the Editor and Associate Editors
- Invited debates – selected on ‘hot topics’ determined by the editorial board

Responding to the ever increasing pace in research, the American Journal of Nephrology adheres to a very tight publication schedule: accepted papers appear online within 5–6 weeks of acceptance.

Annals of Nutrition and Metabolism

Annals of Nutrition and Metabolism is a leading international peer-reviewed journal for sharing information on human nutrition, metabolism and related fields, covering the broad and multidisciplinary nature of science in nutrition and metabolism. The journal focuses on human nutrition and metabolism and related areas, including experimental studies and basic science that can inform human nutrition science. We welcome manuscripts describing observational and intervention studies as well as basic science reports on the topics of foods, diets and dietary supplements, nutrigenomics and genetics related to metabolism, on energy metabolism, macro- and micronutrients including vitamins and minerals, biofunctional compounds, dietetics, obesity, clinical nutrition, social sciences and health economy as related to nutrition and metabolism and nutrition policy. Laboratory-based science may include descriptions of relevant experimental models. In addition to Original Papers, the journal will publish Review Articles on topical subjects, Systematic Reviews, short Commentaries and Viewpoint articles that may address current controversies, short Meeting Reports, Letters to the Editor, and Announcements/Society News. The journal will also publish Supplements with proceedings from internationally relevant conferences on nutrition and metabolism.

Audiology and Neurotology provides a forum for the publication of the mostadvanced and rigorous scientific research related to the basic science and clinical aspects of the auditory and vestibular system and diseases of the ear. This journal seeks submission of cutting edge research opening up new and innovative fields of study that may improve our understanding and treatment of patients with disorders of the auditory and vestibular systems, their central connections and their perception in the central nervous system. In addition to original papers the journal also offers invited review articles on current topics written by leading experts in the field. The journal is of primary importance for all scientists and practitioners interested in audiology, otology and neurotology, auditory neurosciences and related disciplines.

We are pleased to bring to our international readership the latest basic science findings, which are the underpinnings for the translational research that leads to advances in the diagnosis and treatment of ear and balance disorders.

More information at www.karger.com/aud
Practical information on hemodialysis, hemofiltration, peritoneal dialysis and apheresis is featured in this journal. Recognizing the critical importance of equipment and procedures, particular emphasis has been placed on reports, drawn from a wide range of fields, describing technical advances and improvements in methodology. Papers reflect the search for cost-effective solutions which increase not only patient survival but also patient comfort and disease improvement through prevention or correction of undesirable effects. Advances in vascular access and blood anticoagulation, problems associated with exposure of blood to foreign surfaces and acute-care nephrology, including continuous therapies, also receive attention. Nephrologists, internists, intensivists and hospital staff involved in dialysis, apheresis and immunoabsorption for acute and chronic solid organ failure will find this journal useful and informative. Blood Purification also serves as a platform for multidisciplinary experiences involving nephrologists, cardiologists and critical care physicians in order to expand the level of interaction between different disciplines and specialties.

More information at www.karger.com/bpu
Brain, Behavior and Evolution is a journal with a loyal following, high standards, and a unique profile as the main outlet for the continuing scientific discourse on nervous system evolution. The journal publishes comparative neurobiological studies that focus on nervous system structure, function, or development in vertebrates as well as invertebrates. Approaches range from the molecular over the anatomical and physiological to the behavioral. Despite this diversity, most papers published in Brain, Behavior and Evolution include an evolutionary angle, at least in the discussion, and focus on neural mechanisms or phenomena. Some purely behavioral research may be within the journal’s scope, but the suitability of such manuscripts will be assessed on a case-by-case basis. The journal also publishes review articles that provide critical overviews of current topics in evolutionary neurobiology.

Breast Care is a peer-reviewed scientific journal that covers all aspects of breast biology. Due to its interdisciplinary perspective, it encompasses articles on basic research, prevention, diagnosis, and treatment of malignant diseases of the breast. In addition to presenting current developments in clinical research, the scope of clinical practice is broadened by including articles on relevant legal, financial and economic issues.

A. Salemi, New York, N.Y.
J. Somberg, Chicago, Ill.
J. Taegtmeyer, Houston, Tex.

‘Cardiology features original research reports of high quality placed in a useful context by review articles and editorial comments. The editors and editorial board are quite proud of the result and believe it to be very useful in the program of lifelong learning required of medical professionals.’
Jeffrey S. Borer, Editor-in-Chief

Cardiology features first reports on original clinical, preclinical and fundamental research as well as “Novel Insights from Clinical Experience” (case reports illustrating generalizable principles) and topical comprehensive reviews in selected areas of cardiovascular disease. “Editorial Comments” provide critical but positive evaluations of recent articles. Papers not only describe but offer critical appraisals of new developments in non-invasive and invasive diagnostic methods and in pharmacologic, nutritional and mechanical/surgical therapies. Readers are thus placed in a useful context by review articles and editorial comments. The editors and editorial board are quite proud of the result and believe it to be very useful in the program of lifelong learning required of medical professionals.’

Jeffrey S. Borer, Editor-in-Chief

Journals (Subscription)
The journal CardioRenal Medicine explores the mechanisms by which obesity and other metabolic abnormalities promote the pathogenesis and progression of heart and kidney disease (cardiorenal metabolic syndrome). It provides an interdisciplinary platform for the advancement of research and clinical practice, focussing on translational issues.

Attention is paid to the fact that some metabolic abnormalities cluster with heart and chronic kidney disease, and collectively this is called the cardiorenal metabolic syndrome. Moreover, certain metabolic abnormalities of the heart promote impaired coronary-artery endothelial function, diastolic dysfunction and ischemic reconditioning that parallel glomerular hyperfiltration and impairments in proximal tubule handling of sodium and albumin. Another point of focus is the role of the obesity epidemic in promoting the increasing incidence of heart and kidney disease in industrialized countries and the prevailing problems of insufficient exercise and excessive consumption of cheap, unwholesome food in promotion of the cardiorenal metabolic syndrome in both adults and children.

CardioRenal Medicine addresses a multidisciplinary audience consisting of nephrologists, cardiologists, nutritionists, endocrinologists, physiologists and general internists.

Caries Research publishes epidemiological, clinical and laboratory studies in dental caries, fluorosis, erosion and related dental diseases. Some studies build on the considerable advances already made in caries prevention, e.g. through fluoride application. Some aim to improve understanding of the increasingly important problem of dental erosion and the associated tooth wear process. Others monitor the changing pattern of caries in different populations, explore improved methods of diagnosis or evaluate methods of prevention or treatment. Studies using genetic methods to identify human genes or mutations associated with caries prevalence are welcome as are manuscripts using modern high-throughput sequencing methods to characterise microbial biofilms associated with oral health and active caries. The broad coverage of innovative research into dental caries is unique and has given the journal an outstanding international reputation as an indispensable source for both basic scientists and clinicians engaged in understanding, investigating and preventing dental diseases.

Cells Tissues Organs

**Open access**

(Author’s Choice™) available

Cells Tissues Organs’ main focus is upon human and animal development. We publish research and analysis of mechanisms in stem cells, tissue engineering and organ formation in the context of integrated organ systems and whole embryos. The journal is guided by a triumvirate of editors from the US, Europe and Asia who are specialized in at least one these fields, and who have assembled a loyal editorial team to support the journal’s aims.

To paraphrase Aristotle, preference will be given observation rather than theory, and only to theories agreeing with observed facts. High scientific standards are expected of submitted papers – such as rigorous logic, careful presentation of results, and concise referencing. In turn, authors can expect a quick, helpful and fair peer review process.

Cells Tissues Organs is renowned for the highest quality in print and online imaging, and regularly publishes whole issues dedicated to a single topical field.

A rapidly-growing field, stroke and cerebrovascular research is unique in that it involves a variety of specialties such as neurology, internal medicine, surgery, radiology, epidemiology, cardiology, hematology, psychology and rehabilitation. Cerebrovascular Diseases is an international forum which meets the growing need for sophisticated, up-to-date scientific information on clinical data, diagnostic testing, and therapeutic issues, dealing with all aspects of stroke and cerebrovascular diseases. It contains original contributions, reviews of selected topics and clinical investigative studies, recent meeting reports and work-in-progress as well as discussions on controversial issues. All aspects related to clinical advances are considered, while purely experimental work appears if directly relevant to clinical issues.

The open access journal Cerebrovascular Diseases Extra provides additional contents based on reviewed and accepted submissions to the main journal Cerebrovascular Diseases on www.karger.com/cee.

This journal publishes original research articles and state-of-the-art reviews on all aspects of antimicrobial and antitumor chemotherapy. The results of experimental and clinical investigations into the microbiological and pharmacologic properties of antibacterial, antiviral and antitumor compounds are major topics of publication. Papers selected for the journal offer data concerning the efficacy, toxicology, and interactions of new drugs in single or combined applications. Studies designed to determine the pharmacokinetic and pharmacodynamic properties of similar preparations and comparing their efficacy are also included. Special emphasis is given to the development of drug-resistance, an increasing problem worldwide.

Complementary Medicine Research is an international journal that aims to bridge the gap between conventional and complementary/alternative medicine (CAM) on a sound scientific basis, promoting their mutual integration. Accordingly, experts of both conventional medicine and CAM cooperate on the journal’s editorial board, which accepts papers only after a rigorous peer-review process in order to maintain a high standard of scientific quality.

Cytogenetic and Genome Research has been the leading forum for original reports and reviews in human and animal cytogenetics, including molecular, clinical and comparative cytogenetics. In recent years, most of the contributions have centered on genome research, including gene regulation and expression, cancer genetics, comparative genetics and human malformation syndromes. The journal publishes key papers on the insights into the mechanisms of chromosome aberrations in somatic, meiotic and malignant cells. Its scope includes studies on invertebrate and plant cytogenetics and genomics. Also featured are recent international reports on human and animal chromosome nomenclature. In addition to regular issues, the journal has been publishing since 2002 a series of topical issues on a broad variety of themes from cytogenetic and genome research.

As a unique forum devoted exclusively to the study of cognitive dysfunction, *Dementia and Geriatric Cognitive Disorders* concentrates on Alzheimer’s and Parkinson’s disease, Huntington’s chorea and other neurodegenerative diseases. The journal draws from diverse related research disciplines such as psychogeriatrics, neuropsychology, clinical neurology, morphology, physiology, genetic molecular biology, pathology, biochemistry, immunology, pharmacology and pharmaceutics. Strong emphasis is placed on the publication of research findings from animal studies which are complemented by clinical and therapeutic experience to give an overall appreciation of the field.

The open access journal *Dementia and Geriatric Cognitive Disorders Extra* provides additional contents based on reviewed and accepted submissions to the main journal *Dementia and Geriatric Cognitive Disorders* on www.karger.com/dee.

Published since 1893, *Dermatology* provides a worldwide survey of clinical and investigative dermatology. Original papers report clinical and laboratory findings. In order to inform readers of the implications of recent research, reviews prepared by invited, internationally recognized scientists are regularly featured. In addition, the journal publishes papers on novel treatments, surgical pearls, consensus guidelines and industry news. *Dermatology* offers the analytical dermatologist a broad range of information, from practical problem solving to a deeper mechanistic understanding of skin diseases, while at the same time providing space for further hypotheses that may help to find new solutions to old problems. The journal publishes contributions from across the globe on a wide range of skin-related topics including epidemiology, skin biology, clinical dermatology, and therapy. It enjoys a high reputation in the field of dermatology.

Developmental Neuroscience is a multidisciplinary journal publishing papers covering all stages of invertebrate, vertebrate and human brain development. Emphasis is placed on publishing fundamental as well as translational studies that contribute to our understanding of mechanisms of normal development as well as genetic and environmental causes of abnormal brain development. The journal thus provides valuable information for both physicians and biologists. To meet the rapidly expanding information needs of its readers, the journal combines original papers that report on progress and advances in developmental neuroscience with concise mini-reviews that provide a timely overview of key topics, new insights and ongoing controversies.

Gain new insights into the mechanisms of normal and abnormal brain development
Digestion concentrates on clinical research reports: in addition to editorials and reviews, the journal features sections on Stomach/Esophagus, Bowel, Neuro-Gastroenterology, Liver/Bile, Pancreas, Metabolism/Nutrition and Gastrointestinal Oncology. Papers cover physiology in humans, metabolic studies and clinical work on the etiology, diagnosis, and therapy of human diseases. It is thus especially cut out for gastroenterologists employed in hospitals and outpatient units. Moreover, the journal’s coverage of studies on the metabolism and effects of therapeutic drugs carries considerable value for clinicians and investigators beyond the immediate field of gastroenterology.

Digestive Diseases publishes original reports and review articles that describe the most recent advances in diagnostic methods and treatment options for diseases of the gastrointestinal tract and the hepatopancreato-biliary system. The newly established section "Endoscopy and Imaging" features papers that describe a novel technique, supported by a video. The journal also covers related topics such as microbiota, nutrition and probiotics, endoscopy and imaging. Providing information about the latest clinical evidence and their application in patient care, Digestive Diseases is an invaluable source of information for clinicians, specialists and physicians-in-training.

Digestive Surgery presents a comprehensive overview in the field of gastrointestinal surgery. Interdisciplinary in scope, the journal keeps the specialist aware of advances in all fields that contribute to improvements in the diagnosis and treatment of gastrointestinal disease. Particular emphasis is given to articles that evaluate not only recent clinical developments, especially clinical trials and technical innovations such as new endoscopic and laparoscopic procedures, but also relevant translational research. Each contribution is carefully aligned with the need of the digestive surgeon. Thus, the journal is an important component of the continuing medical education of surgeons who want their practice to benefit from a familiarity with new knowledge in all its dimensions.

European Addiction Research is a unique international scientific journal for the rapid publication of innovative research covering all aspects of addiction and related disorders. Representing an interdisciplinary forum for the exchange of recent data and expert opinion, it reflects the importance of a comprehensive approach to resolve the problems of substance abuse and addiction in Europe. Coverage ranges from clinical and research advances in the fields of psychiatry, biology, pharmacology and epidemiology to social, and legal implications of policy decisions. The goal is to facilitate open discussion among those interested in the scientific and clinical aspects of prevention, diagnosis and therapy as well as dealing with legal issues. An excellent range of original papers makes European Addiction Research the forum of choice for all.

European Neurology publishes original papers, reviews and letters to the editor. Papers presented in this journal cover clinical aspects of diseases of the nervous system and muscles, as well as their neuropathological, biochemical, and electrophysiological basis. New diagnostic probes, pharmacological and surgical treatments are evaluated from clinical evidence and basic investigative studies. The journal also features original works and reviews on the history of neurology.

European Surgical Research features original clinical and experimental papers, condensed reviews of new knowledge relevant to surgical research, and short technical notes serving the information needs of investigators in various fields of operative medicine. Coverage includes surgery, surgical pathophysiology, drug usage, and new surgical techniques. Special consideration is given to information on the use of animal models, physiological and biological methods as well as biophysical measuring and recording systems. The journal is of particular value for workers interested in pathophysiologic concepts, new techniques and in how these can be introduced into clinical work or applied when critical decisions are made concerning the use of new procedures or drugs.

The European Thyroid Journal publishes papers reporting original research in basic, translational and clinical thyroidology. Original contributions cover all aspects of the field, from molecular and cellular biology to immunology and biochemistry, from physiology to pathology, and from pediatric to adult thyroid diseases with a special focus on thyroid cancer. Readers also benefit from reviews by noted experts, which highlight especially active areas of current research. The journal will further publish formal guidelines in the field, produced and endorsed by the European Thyroid Association.

The first journal to focus on the fetus as a patient, Fetal Diagnosis and Therapy provides a wide range of biomedical specialists with a single source of reports encompassing the common discipline of fetal medicine. The journal includes peer-reviewed original research papers, spanning from basic and pathophysiologic investigations to clinical studies in fetal diagnosis and therapy. In addition, the journal addresses timely topics of wide interest in a section dedicated to Reviews and Mini Reviews, where specific clinical questions are covered by internationally renowned experts. Finally, two sections, Novel Insights in Fetal Medicine and Images in Fetal Medicine, are dedicated to particularly interesting case reports with a special focus on cases documented by means of multimodal imaging.

Published since 1947, *Folia Phoniatrica et Logopaedica* provides a forum for international research on the anatomy, physiology, and pathology of structures of the speech, language, and hearing mechanisms. Original papers published in this journal report new findings on basic function, assessment, management, and test development in communication sciences and disorders, as well as experiments designed to test specific theories of speech, language, and hearing function. Review papers of high quality are also welcomed.

Recognizing that research in human biology must be founded on a comparative knowledge of our closest relatives, this journal is the natural scientist's ideal means of access to the best of current primate research. *Folia Primatologica* covers fields as diverse as molecular biology and social behaviour, and features articles on ecology, conservation, palaeontology, systematics and functional anatomy. In-depth articles and invited reviews are contributed by the world's leading primatologists. In addition, special issues provide rapid peer-reviewed publication of conference proceedings. *Folia Primatologica* is one of the top-rated primatology publications and is acknowledged worldwide as a core journal for primatologists, zoologists and anthropologists.

"All aspects of primatology, including anatomy, behaviour, ecology, genetics, palaeontology and evolution are covered. As the flagship journal of the European Federation of Primatology, it allows the rapid publication of time sensitive research and free open access for editor's choice articles and innovative reviews."
Simon K. Bearder, President Primate Society of Great Britain

Gastrointestinal Tumors is an international, peer-reviewed journal that brings together the leading opinions in all fields related to gastrointestinal cancer research. Ranging from the identification of new therapeutic targets to epidemiology, disease prevention, treatment and patient management, the journal provides a platform for the dissemination of key opinions and research from thought leaders in the field. By publishing timely reviews and original papers covering the latest developments, the journal will help readers gain insight into the evolving body of research across the relevant disciplines.

In view of the ever-increasing fraction of elderly people, understanding the mechanisms of aging and age-related diseases has become a matter of urgent necessity. Gerontology, the oldest journal in the field, is also the only journal that responds to this need by drawing topical contributions from multiple disciplines to support the fundamental goals of extending active life and enhancing its quality. The range of papers is classified into five sections. In the Clinical Section, the aetiology, pathogenesis, prevention and treatment of age-related diseases are discussed from a gerontological rather than a geriatric viewpoint. The Experimental Section contains up-to-date contributions from basic gerontological research. Papers dealing with behavioural development and related topics are placed in the Behavioural Science Section. Basic aspects of regeneration in different experimental biological systems as well as in the context of medical applications are dealt with in the Regenerative Section whereas the Technological Section contains important information on major technological advances for the elderly. Providing a primary source of high-quality papers covering all aspects of aging in humans and animals, Gerontology serves as an ideal information tool for all readers interested in the topic of aging from a broad perspective.

This journal covers the most active and promising areas of current research in gynecology and obstetrics. Invited, well-referenced reviews by noted experts keep readers in touch with the general framework and direction of international study. Original papers report selected experimental and clinical investigations in all fields related to gynecology, obstetrics and reproduction. Short communications are published to allow immediate discussion of new data. The international and interdisciplinary character of this periodical provides an avenue to less accessible sources and to worldwide research for investigators and practitioners.

The mission of *Hormone Research in Paediatrics* is to improve the care of children with endocrine disorders by promoting basic and clinical knowledge. The journal facilitates the dissemination of information through original papers, mini reviews, clinical guidelines and papers on novel insights from clinical practice. Periodic editorials from outstanding paediatric endocrinologists address the main published novelties by critically reviewing the major strengths and weaknesses of the studies.

Distinguished by its international recognition since 1958, Human Development publishes in-depth conceptual articles, commentaries, and essay book reviews that advance our understanding of developmental phenomena. Contributions serve to raise theoretical issues, flesh out interesting and potentially powerful ideas, and differentiate key constructs. Contributions come primarily from developmental psychology. Contributions are also welcomed from varied disciplines, including anthropology, biology, education, history, philosophy, psychology, and sociology.

More information at www.karger.com/hde
Gathering original research reports and short communications from all over the world, Human Heredity is devoted to methodological and applied research on the genetics of human populations, association and linkage analysis, genetic mechanisms of disease, and new methods for statistical genetics, for example, analysis of rare variants and results from next generation sequencing. The value of this information to many branches of medicine is shown by the number of citations the journal receives in fields ranging from immunology and hematology to epidemiology and public health planning, and the fact that at least 50% of all Human Heredity papers are still cited more than 8 years after publication (according to ISI Journal Citation Reports). Special issues on methodological topics (such as ‘Consanguinity and Genomics’ in 2014; ‘Integration of Omics Data in Genetic Epidemiology’ in 2015 or reviews of advances in particular fields (‘Genetic Diversity in European Populations: Evolutionary Evidence and Medical Implications’ in 2014; ‘Genes and the Environment in Obesity’ in 2013) are published every year. Renowned experts in the field are invited to contribute to these special issues.

An excellent source of methodological and applied genetic research
Imparting the most current information to physicians caring for patients with intestinal diseases, this journal seeks to identify the basic pathophysiological mechanisms common to different inflammatory intestinal diseases, to compare the environmental conditions involved in their pathogenesis, and to provide important insights into their therapies. *Inflammatory Intestinal Diseases* thus reduces the gap between clinical and basic sciences as well as between hepatology and inflammatory diseases of the intestinal tract such as inflammatory bowel diseases, celiac disease and irritable bowel syndrome. *Inflammatory Intestinal Diseases* also aims to improve the exchange of knowledge between researchers from Eastern and Western countries, which is reflected in the composition of the Editorial Board. The journal accepts randomized controlled clinical trials, observational studies, and cost-effectiveness analyses as well as commentary type and systematic reviews and consensus statements.

International Archives of Allergy and Immunology provides a forum for experimental and clinical research in modern molecular and cellular allergology and immunology. Appearing monthly, the journal publishes original work in the fields of allergy, immunopathology, immunogenetics, immunopharmacology, immunoenocrinology, tumor immunology, mucosal immunity, transplantation and immunology of infectious and connective tissue diseases. In addition to original papers it features short communications, reviews, minireviews, commentaries and opinions. A team of internationally renowned and committed editors guarantees a fair review process, high scientific quality and fast dissemination of significant and novel work.

Interventional Neurology aims primarily at reporting clinical and laboratory studies on endovascular techniques as well as other interventional therapies in the management of stroke. Further emphasis is placed on interventional studies for cerebrovascular diseases, intracranial tumors and diseases of the spinal cord. Contributions related to interventions in neurological disorders of other specialities, i.e. angiology, neurology, neuroradiology or neurosurgery, are also welcome.

The Editors of Intervirology invite the submission of manuscripts on a wide range of topics in fundamental and medical virology. The journal's scope encompasses work on the molecular biology of human and animal viruses, including genome organization and regulation, and the structure and function of viral proteins. The pathogenesis, immunology, diagnosis, epidemiology, prophylaxis and therapy of viral diseases are also considered. The journal regularly publishes thematic issues often including timely review articles and field research reports on controversial topics. It aims to be easily accessible to both specialists in the field and to those who want to keep track of the latest developments outside their own area of interest.

We are entering a new and exciting era of microbiological study and application. Recent advances in the now established disciplines of genomics, proteomics and bioinformatics, together with extensive cooperation between academic and industrial concerns have brought about an integration of basic and applied microbiology as never before. The Journal of Molecular Microbiology and Biotechnology (JMMB) aims to reflect this development by publishing original research papers from all areas of microbiology and biotechnology. It also features written symposia on selected topics, timely reviews and minireviews. Theoretical approaches and descriptions of novel, microbiologically relevant software is also considered. Contributions and ideas from large segments of the scientific community are welcome to make JMMB a viable, much-needed and up-and-coming forum for current basic and applied microbiological research.

More information at [www.karger.com/mmb](http://www.karger.com/mmb)
The *Journal of Vascular Research* publishes original articles and reviews of scientific excellence in vascular and microvascular biology, physiology and pathophysiology. The scope of the journal covers a broad spectrum of vascular and lymphatic research, including vascular structure, vascular function, haemodynamics, mechanics, cell signalling, intercellular communication, growth and differentiation. The "Vascular Update" series regularly presents state of the art reviews on hot topics in vascular biology. Manuscript processing times are, consistent with stringent review, kept as short as possible due to electronic submission. All articles are published online first, ensuring rapid publication. The *Journal of Vascular Research* is the official journal of the European Society of Microcirculation. A biennial prize is awarded to the authors of the best paper published in the journal over the previous two years, thus encouraging young scientists working in the exciting field of vascular biology to publish their findings.

Lifestyle Genomics aims to provide a forum for highlighting new advances in the broad area of lifestyle-gene interactions and their influence on health and disease. The journal welcomes novel contributions that investigate how genetics may influence a person’s response to lifestyle factors, such as diet and nutrition, natural health products, physical activity, and sleep, amongst others. Additionally, contributions examining how lifestyle factors influence the expression/abundance of genes, proteins and metabolites in cell and animal models as well as in humans are also of interest. The journal will publish high-quality original research papers, brief research communications, reviews outlining timely advances in the field, and brief research methods pertaining to lifestyle genomics. It will also include a unique section under the heading “Market Place” presenting articles of companies active in the area of lifestyle genomics. Research articles will undergo rigorous scientific as well as statistical/bioinformatic review to ensure excellence.

Liver Cancer has a very high prevalence among cancers in general and is one of the most common causes of death worldwide. Based on these facts, the journal *Liver Cancer* serves the growing need to better understand the causes, mechanisms and therapy of the malignancy. It provides the international community of researchers and clinicians with a platform for their research results, focusing on molecular carcinogenesis, prevention, surveillance, diagnosis and treatment, including molecular targeted therapy, of the disease. *Liver Cancer* publishes clinical and translational research related to the field of liver cancer in both humans and experimental models in the form of original and review articles as well as treatment guidelines from various countries.

Molecular Neuropsychiatry is a peer reviewed, rapid communication journal that focuses on molecular neuropharmacology, synaptic neurobiology, expression studies, neural circuits, imaging, neural stem cells, genetics, systems neurobiology and human, animal, and cellular model systems. The journal publishes original research articles, reviews that shed light on the molecular basis of psychiatric illnesses and normal brain behavior as well as short communications including new insights and new developments. The submitted paper will be subject to an editorial review and a decision whether to further peer review will be made in approximately five business days. We aim to have a review decision within one month. Molecular Neuropsychiatry is the official journal of the Molecular Psychiatry Association, whose purpose it is to promote research findings that may lead to a better understanding of the molecular basis of psychiatric disorders.

Molecular Syndromology publishes high-quality research articles, short reports and reviews on common and rare genetic disorders and syndromes, increasing clinical understanding through molecular insights. Topics of particular interest are the molecular basis of genetic syndromes, genotype-phenotype correlations, strategies in disease management and therapeutic approaches based on molecular findings. Research on model systems is welcome, especially when it is relevant to human genetics. With high-quality reviews on current topics the journal aims to facilitate translation of research findings to a clinical setting while also stimulating further research on clinically relevant questions. The journal targets not only medical geneticists and basic biomedical researchers, but also clinicians dealing with genetic disorders and syndromes. With Associate Editors from four continents and a broad international Editorial Board the journal welcomes submissions covering the latest research from around the world.

This highly respected and frequently cited journal is a prime source of information in the area of fetal and neonatal research. Original papers present research on all aspects of neonatology, fetal medicine and developmental biology. These papers encompass both basic science and clinical research including randomised trials, observational studies and epidemiology. Basic science research covers molecular biology, molecular genetics, physiology, biochemistry and pharmacology in fetal and neonatal life. In addition to the classic features the journal accepts papers for the sections Research Briefings, Sources of Neonatal Medicine (historical pieces) and Research Methods in Neonatal Medicine. Papers reporting results of animal studies should be based upon hypotheses that relate to developmental processes or disorders in the human fetus or neonate.

**Neonatology**

**Editors-in-Chief**

H.L. Halliday, Belfast
C.P. Speer, Würzburg

"Neonatology is one of the oldest and most reputable international medical journals dedicated exclusively to neonatal-perinatal medicine. Over the years it has provided scientists and clinicians with access to some of the most important advances in basic and clinical science related to newborn care. Its reputation and impact have steadily increased, attracting work from outstanding researchers around the world."

Professor Eduardo Bancalari, University of Miami, Miller School of Medicine

A critical look at hot issues in nephrology

Nephron comprises two sections, “Clinical Practice” and “Experimental Nephrology and Genetics”, which are each under the editorship of internationally recognized leaders and served by specialized and young Associate Editors. Apart from high-quality original research, Nephron publishes invited reviews/minireviews on up-to-date topics. The section “Clinical Practice” also includes Second Opinion articles that provide a platform for international experts and opinion leaders to cast a critical eye over published papers dealing with hot topics in clinical and experimental nephrology. The section “Experimental Nephrology and Genetics” includes Case Studies of Genetic Interest articles that provide clinically relevant examples of the genetic heterogeneity of renal diseases.

Papers undergo an innovative and transparent peer review process encompassing a Presentation Report which assesses and summarizes the presentation of the paper in an unbiased and standardized way.

Neurodegenerative Diseases

Neurodegenerative Diseases is a bimonthly, multidisciplinary journal for the publication of advances in the understanding of neurodegenerative diseases, including Alzheimer’s disease, Parkinson’s disease, amyotrophic lateral sclerosis, Huntington’s disease and related neurological and psychiatric disorders.

Neurodegenerative Diseases accepts high-quality papers in the form of either short reports (less than 5 pages) or articles (6–12 pages) from a broad spectrum of scientific research areas ranging from molecular and cell biology to neuroscience, pharmacology, genetics and clinical sciences.

Neuroendocrinology publishes papers reporting original research and reviews in basic and clinical neuroendocrinology. The journal explores the complex interactions between neuronal networks and endocrine glands in both the central and peripheral nervous systems. Original contributions cover all aspects of neuroendocrinology, from genetic, molecular and cellular neuroendocrinology, physiology, pharmacology, and the neuroanatomy of neuroendocrine systems to neuroendocrine correlates of behavior, clinical neuroendocrinology and neuroendocrine cancers including updates on diagnostic and therapeutic guidelines. Reviews by noted experts may be solicited or unsolicited which highlight cutting edge advances. Special focus editions of topical interest are also sought, often from proceedings of society meetings.

Neuroepidemiology is the only internationally recognised peer-reviewed periodical devoted to descriptive, analytical and experimental studies in the epidemiology of neurolologic disease. The scope of the journal expands the boundaries of traditional clinical neurology by providing new insights regarding the etiology, determinants, distribution, management and prevention of diseases of the nervous system. In order to meet the demands of the ever increasing pace in research, Neuroepidemiology is committed to reduce its online publication span to approx. six weeks after acceptance: papers will be published online first, and their printed version will be included in the next scheduled issue. The journal enjoys a high scientific reputation with a continually increasing impact factor and an equally high circulation.

The rapidly expanding area of research known as neuroimmunomodulation explores the way in which the nervous system interacts with the immune system via neural, hormonal, and paracrine actions. Encompassing both basic and clinical research, Neuroimmunomodulation reports on all aspects of these interactions. Basic investigations consider all neural and humoral networks from molecular genetics through cell regulation to integrative systems of the body. The journal also aims to clarify the basic mechanisms involved in the pathogenesis of the CNS pathology in AIDS patients and in various neurodegenerative diseases. Although primarily devoted to research articles, timely reviews are published on a regular basis.

The biological approach to mental disorders continues to yield innovative findings of clinical importance, particularly if methodologies are combined. This journal collects high quality empirical studies from various experimental and clinical approaches in the fields of Biological Psychiatry, Biological Psychology and Neuropsychology. It features original, clinical and basic research in the fields of neurophysiology and functional imaging, neuropharmacology and neurochemistry, neuroendocrinology and neuroimmunology, genetics and their relationships with normal psychology and psychopathology. In addition, the reader will find studies on animal models of mental disorders and therapeutic interventions, and pharmacoencephalographic studies. Regular reviews report new methodologic approaches, and selected case reports provide hints for future research. Neuropsychobiology also hosts editorial articles, viewpoints, commentaries and debates on current strategies and methods employed to study the biological basis of mental functions and their interactions with psychological and social factors.

Ocular Oncology and Pathology

Editors
A.D. Singh,
Cleveland, Ohio
H.E. Grossniklaus,
Atlanta, Ga.

‘Ocular Oncology and Pathology is the official journal of the American Association of Ophthalmic Oncologists and Pathologists (aaoop). This is a unique journal that is dedicated to the specialty of ocular oncology and pathology, which encompasses the medical, surgical and radiation care of patients with ocular cancers as well as the pathology of these cancers. The journal publishes original clinical and translational research articles that pertain to ocular oncology and pathology, as well as small case series and brief reports.’
H.E. Grossniklaus, Editor

Ocular Oncology and Pathology provides a selection of topical clinical and basic research articles covering the etiology, pathology, diagnostic techniques, imaging features, and advances in medical and surgical treatment of ophthalmic cancers. The focus lies on clinicopathologic correlations, evidence-based clinical studies and translational science. In addition to original papers, Ocular Oncology and Pathology features timely reviews, controversial topics, and summaries of related articles to ensure that its readers remain well informed.

More information at www.karger.com/oop
Although laboratory and clinical cancer research need to be closely linked, observations at the basic level often remain removed from medical applications. This journal works to accelerate the translation of experimental results into the clinic, and back again into the laboratory for further investigation. The fundamental purpose of this effort is to advance clinically-relevant knowledge of cancer, and improve the outcome of prevention, diagnosis and treatment of malignant disease. The journal publishes significant clinical studies from cancer programs around the world, along with important translational laboratory findings, mini-reviews (invited and submitted) and in-depth discussions of evolving and controversial topics in the oncology arena. A unique feature of the journal is a section which focuses on rapid peer-review and subsequent publication of short reports of phase 1 and phase 2 clinical cancer trials, with a goal of insuring that high-quality clinical cancer research quickly enters the public domain, regardless of the trial’s ultimate conclusions regarding efficacy or toxicity.

Oncology Research and Treatment

Journals (Subscription)

Oncology Research and Treatment offers an interdisciplinary forum for cancer research and treatment. Peer-reviewed original and review articles cover a wide range of aspects in medical hematology and oncology, surgical, neurosurgical, gynecological, pediatric and urological oncology, oral and maxillofacial surgery, dermatological oncology, diagnostics, radiation oncology, psychological care, pathology, clinical-translational oncology, biometry, and oncological rehabilitation. Continuous medical education and clinical news form a further focus. Compact and current, Oncology Research and Treatment keeps both clinicians and researchers up to date.

Ophthalmic Research

Journal for Translational and Clinical Research

Editor
José Cunha-Vaz, Coimbra

‘Ophthalmic Research is a well-established scientific journal dedicated to facilitate communication between the eye research community. Its main objective is to offer a platform for the best contributions in every area of eye research, including fundamental research and clinical research giving particular attention to the transfer of knowledge from the laboratory bench to the patient, i.e. translational research. It is generally acknowledged today that the value of vision is continually increasing in modern day life.’
José Cunha-Vaz, Editor

Ophthalmic Research features original papers and reviews reporting on translational and clinical studies in the field of ophthalmology and vision research. The journal emphasizes hypothesis-based clinical and laboratory research with statistically valid results that clearly advance the fields of ophthalmic and vision research. It also aims to provide a record of international clinical research for both researchers and clinicians in ophthalmology. Finally, the transfer of information from fundamental research to clinical research and clinical practice is particularly welcome.

Ophthalmologica

Published since 1899, Ophthalmologica has become a frequently cited guide to international work in clinical and experimental ophthalmology. It contains a selection of patient-oriented contributions covering the etiology of eye diseases, diagnostic techniques, and advances in medical and surgical treatment, with special emphasis on retinal diseases. In addition to original papers, Ophthalmologica features regularly timely reviews in an effort to keep the reader well informed and updated. The large international circulation of this journal reflects its importance.

ORL contains concise, original scientific papers of interest for both clinicians and researchers in oto-rhino-laryngology and head and neck surgery. Contributions drawn from the basic sciences cover new knowledge on the anatomy, pathology, pathophysiology, immunology and tumor biology of head and neck and the auditory and vestibular system, the salivary glands, paranasal sinuses and of the organs of the upper respiratory and digestive tract. The practical value of the journal is accentuated by reports of clinical progress in diagnosis and therapy.

High Impact Reports in ORL: These papers focus on novel and exciting translational and clinical research. They have an expedited review process of two weeks and are published within two months of acceptance. High impact reports are limited to four printed pages and should be submitted explicitly for this section.

Pathobiology offers a valuable platform for the publication of high-quality original research into the mechanisms underlying human disease. Aiming to serve as a bridge between basic biomedical research and clinical medicine, the journal welcomes articles from scientific areas such as pathology, oncology, anatomy, virology, internal medicine, surgery, cell and molecular biology, and immunology. Published bimonthly, Pathobiology features original research papers and reviews on translational research. The journal offers the possibility to publish proceedings of meetings dedicated to one particular topic.

Pediatric Neurosurgery strives to publish new information and observations in pediatric neurosurgery, neurology, neuroradiology and neuropathology. The focus is on the etiology of neurologic diseases, the operative care of affected patients and outcomes research. In addition to experimental and clinical studies, the journal presents critical reviews on selected topics as well as case histories and reports on advances in surgical technique. This thought-provoking approach encourages dissemination of information from neurosurgeons and neuroscientists around the world. Published material will be of interest to both researchers and clinicians who study and care for patients with pediatric, congenital, and developmental diseases of the nervous system.

Pharmacology is an international forum to present and discuss current perspectives in research on new drugs and in the benefit-risk evaluation of established drugs. The journal communicates research in basic and clinical pharmacology and related fields. It covers biochemical pharmacology, molecular pharmacology, immunopharmacology, drug metabolism and drug interaction, pharmacogenetics, neuropsychopharmacology, human pharmacokinetics and reports from clinical trials. In addition to original papers and short communications of investigative findings and pharmacological drug profiles, the journal contains critical comments, reviews, and perspective notes; research communications of novel therapeutic agents with an immediate impact on pharmacotherapy are encouraged.

Contemporary interdisciplinary research on phonetics employs a wide range of approaches, from instrumental measures to perceptual and neurocognitive procedures, to computational modelling, for investigating the properties and principles of phonetics in communicative settings across the world’s languages. It also ranges across styles, types of language users, and communicative modalities (speech, sign, song).

Phonetica is an international forum for phonetic science that covers all aspects of the subject matter, from phonetic and phonological descriptions, to articulatory and signal analytic measures of production, to perception, acquisition, and phonetic variation and change. Phonetica thus provides a platform for a comprehensive understanding of producer-perceiver interaction across languages and dialects, and of learning throughout the lifespan and across contexts. Papers published in this journal report expert original work that deals both with theoretical issues, new empirical data, and innovative methods and applications that help to advance the field.

Phonetica has introduced a new format, the Book Discussion, which reconsiders classic monographs in light of current issues in phonetic science. Book Discussion proposals/submissions are welcome.

Psychopathology is a record of research centered on findings, concepts, and diagnostic categories of phenomenological, experimental and clinical psychopathology. Studies published are designed to improve and deepen the knowledge and understanding of the pathogenesis and nature of psychopathological symptoms and psychological dysfunctions. Furthermore, the validity of concepts applied in the neurosciences of mental functions are evaluated in order to closely bring together mind and brain. Major topics of the journal are trajectories between biological processes and psychological dysfunction that can help us better understand a subject’s inner experiences and interpersonal behavior. Descriptive psychopathology, experimental psychopathology and neuropsychology, developmental psychopathology, transcultural psychiatry as well as philosophy-based phenomenology contribute to this field.

As the volume of literature in the fields of psychotherapy and psychosomatics continues to grow, it becomes increasingly difficult to keep abreast of new and important developments, and to have independent, critical views on key clinical issues concerned with assessment and treatment of mental disorders. Psychotherapy and Psychosomatics has progressively increased its reputation for independence, originality and methodological rigor. It has anticipated and developed new lines of research concerned with psychosomatic medicine, psychotherapy research and psychopharmacology. The journal features editorials and reviews on current and controversial issues; innovations in assessment and treatment; case management articles; original investigations; literature updates; and a lively correspondence section. It has become a unique and vital reference to current research and practice, the home of innovative thinking at the interface between medical and behavioral sciences.

A unique journal with a top SCI ranking of 13.122
Public Health Genomics is the leading international journal focusing on the timely translation of genome-based knowledge and technologies into global public health, health policies, and healthcare as a whole. This peer-reviewed journal is a bimonthly forum featuring original papers, reviews, short communications, and policy statements. It is supplemented by topic-specific issues providing a comprehensive, holistic and ‘all-inclusive’ picture of the chosen subject. Multidisciplinary in scope, it combines theoretical and empirical work from a range of disciplines, notably public health, molecular and medical sciences, the humanities and social sciences. In so doing, it also takes into account rapid scientific advances from fields such as systems biology, microbiomics, epigenomics, exposome and imaging science, or information and communication technologies as well as the high potential of “big data” for public health.

What was until very recently no more than a vision for a new era of public health, in which advances in the “-omic” sciences would be integrated into strategies aiming at benefiting population health, has now become a response to the very pressing need for the development of effective personalized healthcare which is complementary to health protection and health promotion. The aim of Public Health Genomics is to facilitate a broad dialogue between academia, the private sector and government bodies.

From genome-based sciences to global public health
The journal *Pulse* publishes full-length reviews, mini reviews, and original papers in the field of vascular research. Bringing together the basic and clinical sciences across a range of disciplines, *Pulse* provides a forum for communication of the latest findings and hypotheses that enhance our understanding of pulsatile processes and vascular disease. The transdisciplinary approach of the journal fosters collaboration in relevant areas including cardiology, nephrology, neurology, endocrinology and diabetology, gerontology and general medicine. All articles are subject to rigorous peer-review in order to maintain the highest standards of publication.

The editors welcome submissions from all areas of vascular research, including but not limited to epidemiology, pathophysiology, diagnostics, therapeutics and prevention. Online-first publication ensures prompt dissemination of accepted papers to a multidisciplinary audience with an interest in vascular research.

Respiration brings together the results of both clinical and experimental investigations on all aspects of the respiratory system in health and disease. Clinical improvements in the diagnosis and treatment of chest and lung diseases are covered, as are the latest findings in physiology, biochemistry, pathology, immunology and pharmacology. The journal includes classic features such as editorials that accompany original articles in clinical and basic science research, reviews and letters to the editor. Further sections are: The Eye Catcher, What’s Your Diagnosis?, New Insights from Clinical Practice and Guidelines. Respiration is the official journal of the Swiss Respiratory Society (SGP) and also home to the European Association for Bronchology and Interventional Pulmonology (EABIP), which occupies a dedicated section on Interventional Pulmonology in the journal. This modern mix of different features and a stringent peer-review process by a dedicated editorial board make Respiration a complete guide to progress in thoracic medicine.

Discoveries in experimental and clinical research have led to impressive advances in our knowledge of the genetic and environmental mechanisms governing sex determination and differentiation, their evolution as well as the mutations or endocrine and metabolic abnormalities that interfere with normal gonadal development. Sexual Development provides an exclusive forum for this continuously expanding field. Its scope covers all aspects of genetics, molecular biology, embryology, endocrinology, evolution and pathology of sex determination and differentiation in humans and animals. It publishes high-quality original research manuscripts, review articles, short reports, case reports and commentaries. An internationally renowned and multidisciplinary editorial team of prominent scientists serving as section editors, and a distinguished panel of editorial board members ensures fast and author-friendly editorial processing and peer reviewing.
Skin Appendage Disorders provides a wide range of original and review articles dealing with all aspects of hair, nail and skin glands. The section “Novel Insights from Clinical Practice” introduces special case examples and their treatments. Innovative therapies are presented under the heading “Novel Treatments”, and in “Clinical Investigations” the latest findings are discussed. A special highlight are the articles in the section “Guidelines” that present the consensus treatments, and which are a must-read for everyone who wants to stay up-to-date. The section “Adnexal Surgery” focuses on both established and approved as well as new surgical treatments. Pathological evaluation of skin appendage disorders requires specific training and the “Pathology” section will be open to original papers and reviews on this topic. Covering all aspects of the field, Skin Appendage Disorders is of primary importance for dermatologists in clinics and research, dermatological surgeons as well as cosmetic dermatologists.

The venue for research on new drugs and therapeutic concepts

Skin Pharmacology and Physiology
Journal of Pharmacological and Biophysical Research

Editor
J. Lademann, Berlin

Honorary Editor
H.F. Merk, Aachen

Associate Editors
P. Elias, San Francisco, CA
J.W. Fluhr, Berlin
H.J. Maibach, San Francisco, CA
H. Mukhtar, Madison, WI

M. Roberts, Brisbane, QLD
C. Surber, Basel
P. van de Kerkhof, Nijmegen

In the past decade research into skin pharmacology has rapidly developed with new and promising drugs and therapeutic concepts being introduced regularly. Recently, the use of nanoparticles for drug delivery in dermatology and cosmetology has become a topic of intensive research, yielding remarkable and in part surprising results. Another topic of current research is the use of tissue tolerable plasma in wound treatment. Stimulating not only wound healing processes but also the penetration of topically applied substances into the skin, this novel technique is expected to deliver very interesting results. There are many open questions which reflect the importance of the subject and the need for an international scientific forum where they can be discussed in extenso. Dermatologists, pharmaceutical chemists, pharmacologists, toxicologists, and others interested in the subject are invited to contribute and to submit their best research work for publication in Skin Pharmacology and Physiology.

Stereotactic and Functional Neurosurgery

Editor-in-Chief
D.W. Roberts,
Lebanon, NH

"The journal is the premier destination for papers related to the broadly defined field of stereotactic and functional neurosurgery. Here, practitioners and investigators find articles relating to technique, technology, neuroscience, neuroradiology, clinical outcomes, and new surgical indications. Beyond finding material that relates to their own work, more importantly neurosurgeons (and those in allied fields) can be inspired by new ideas that cross-fertilize their interests and make it possible to discover new synergies."
Michael Schuler, Hofstra Northwell School of Medicine,
Lake Success, NY

Stereotactic and Functional Neurosurgery provides a single source for the reader to keep abreast of developments in the most rapidly advancing subspecialty within neurosurgery. Technological advances in computer-assisted surgery, robotics, imaging and neuropsychology are being applied to clinical problems with ever-increasing rapidity in stereotaxis more than any other field, providing opportunities for new approaches to surgical and radiotherapeutic management of diseases of the brain, spinal cord, and spine. Issues feature advances in the use of deep-brain stimulation, imaging-guided techniques in stereotactic biopsy and craniotomy, stereotactic radiosurgery, and stereotactically implanted and stereotactically guided radiotherapeutics and biologicals in the treatment of functional and movement disorders, brain tumors, and other diseases of the brain. Background information from basic science laboratories related to such clinical advances provides the reader with an overall perspective of this field. Proceedings and abstracts from many of the key international meetings furnish an overview of this specialty available nowhere else.

This journal is devoted to all areas of transfusion medicine. These include the quality and security of blood products, therapy with blood components and plasma derivatives, transfusion-related questions in transplantation, stem cell manipulation, therapeutic and diagnostic problems of homeostasis, immuno-hematological investigations, and legal aspects of the production of blood products as well as hemotherapy. Both comprehensive reviews and primary publications that detail the newest work in transfusion medicine and hemotherapy promote the international exchange of knowledge within these disciplines. Consistent with this goal, continuing clinical education is also specifically addressed.

Concise but fully substantiated international reports of clinically oriented research into the science and current management of urogenital disorders form the nucleus of original as well as basic research papers. These are supplemented by up-to-date reviews by international experts on the state-of-the-art of key topics of clinical urological practice. Essential topics receiving regular coverage include the introduction of new techniques and instrumentation as well as the evaluation of new functional tests and diagnostic methods. Special attention is given to advances in new surgical techniques and clinical oncology. The regular publication of selected case reports represents the great variation in urological disease and illustrates treatment solutions in singular cases.

This interdisciplinary journal is unique in its field as it covers the principles of both gastrointestinal medicine and surgery required for treating abdominal diseases. In each issue invited reviews provide a comprehensive overview of one selected topic. Thus, a sound background of the state of the art in clinical practice and research is provided. A panel of specialists in gastroenterology, surgery, radiology, and pathology discusses different approaches to diagnosis and treatment of the topic covered in the respective issue. Original articles, case reports, and commentaries make for further interesting reading.

The journal is a valuable source of information, imparting essential knowledge for mastering the major interdisciplinary challenges in gastrointestinal medicine and surgery.

The interdisciplinary “hub” for researchers, clinicians and public health professionals

Biomedicine Hub

www.biomedicinehub.com

• open access
• peer-reviewed
• fast online publication

An international Editorial Board with more than 170 renowned specialists guarantees high-quality and relevant content.

There is currently no Article Processing Charge (APC).

Biomedicine Hub is an interdisciplinary journal: a ‘hub’ for researchers, clinicians and public health professionals across biomedical disciplines to share research findings, ideas, theories, experimental results and clinical experience.

Biomedicine Hub aims at facilitating the exchange of knowledge between disciplines, with a focus on translational science for the development of cutting-edge technologies and the improvement of health care. A further focus is on emerging interdisciplinary fields at the forefront of medicine.
This peer-reviewed online-only journal publishes original case reports covering the entire spectrum of acute medicine, including emergency medicine, intensive care, and disaster medicine. Clinicians and researchers are given a tool to disseminate their personal experience to a wider public as well as to review interesting cases encountered by colleagues all over the world. To complement the contributions supplementary material is welcomed. The journal will also accept case reports dealing with the use of novel technologies, both in the area of diagnosis and treatment. Supplementary material is welcomed. Universally used terms can be searched across the growing collection of case reports, further facilitating the retrieval of specific information. Following the open access principle, the entire contents can be retrieved at no charge, guaranteeing easy access to this valuable source of anecdotal information at all times.
The first clinical nutrition journal dedicated exclusively to case reports

Case Reports in Clinical Nutrition

www.karger.com/crc

• open access
• peer-reviewed
• fast online publication

This new and exciting peer-reviewed Open Access journal focuses on publishing original case reports in clinical nutrition of both adults and children, an area which is still underrated. Contributions cover the entire field of clinical nutrition, including prevention, diagnosis, and treatment in the out- and in-patient setting. Case Reports in Clinical Nutrition not only gives clinicians, researchers, and dietitians the opportunity to share their knowledge and experience with a wide and interested readership, but also provides a chance to review exciting cases from colleagues worldwide.

In line with the principle of Open Access, the entire contents of the journal can be retrieved without charge, assuring easy access to this valuable source of case reports with the aim to improve patient care.
Case Reports in Dermatology

www.karger.com/cde

• open access
• peer-reviewed
• fast online publication

This peer-reviewed online-only journal publishes original case reports covering the entire spectrum of dermatology, including prevention, diagnosis, treatment, toxicities of therapy, supportive care, quality-of-life, and survivorship issues. The journal will also accept case reports dealing with the use of novel technologies, both in the arena of diagnosis and treatment. Supplementary material is welcomed.

The intent of the journal is to provide clinicians and researchers with a tool to disseminate their personal experiences to a wider public as well as to review interesting cases encountered by colleagues all over the world.

Universally used terms can be searched across the entire growing collection of case reports, further facilitating the retrieval of specific information.

Following the open access principle, the entire contents can be retrieved at no charge, guaranteeing easy access to this valuable source of anecdotal information at all times.

This peer-reviewed online-only journal publishes original case reports covering the entire spectrum of nephrology and dialysis, including genetic susceptibility, clinical presentation, diagnosis, treatment or prevention, toxicities of therapy, critical care, supportive care, quality-of-life and survival issues. The journal will also accept case reports dealing with the use of novel technologies, both in the arena of diagnosis and treatment. Supplementary material is welcomed.

The intent of the journal is to provide clinicians and researchers with a tool to disseminate their personal experiences to a wider public as well as to review interesting cases encountered by colleagues all over the world. Universally used terms can be searched across the growing collection of case reports, further facilitating the retrieval of specific information. Following the open access principle, the entire contents can be retrieved at no charge, guaranteeing easy access to this valuable source of anecdotal information at all times.

This new peer-reviewed online-only journal publishes original case reports covering the entire spectrum of neurology. Clinicians and researchers are given a tool to disseminate their personal experience to a wider public as well as to review interesting cases encountered by colleagues all over the world. To complement the contributions supplementary material is welcomed.

The reports are searchable according to the key words supplied by the authors; it will thus be possible to search across the entire growing collection of case reports with universally used terms, further facilitating the retrieval of specific information. Following the open access principle, the entire contents can be retrieved at no charge, guaranteeing easy access to this valuable source of anecdotal information at all times.

Case Reports in Orthopedic Research

www.karger.com/cio

- open access
- peer-reviewed
- fast online publication

This peer-reviewed online-only journal publishes original case reports covering the entire spectrum of orthopedics, including prevention, diagnosis, treatment and rehabilitation, quality of life, and pediatric issues. The journal will also accept case reports dealing with the use of novel technologies, both in the area of diagnosis and treatment. Supplementary material is welcomed. The intent of the journal is to provide clinicians and researchers with a tool to disseminate their personal experiences to a wider public as well as to review interesting cases encountered by colleagues all over the world. Universally used terms can be searched across the entire growing collection of case reports, further facilitating the retrieval of specific information and clinical progress, and improving orthopedic clinical treatment and the quality of life of patients.

Following the open access principle, the entire contents can be retrieved at no charge, guaranteeing easy access to this valuable source of anecdotal information at all times.
A multidisciplinary scientific forum on cellular function

Cellular Physiology and Biochemistry

www.karger.com/cpb

• peer-reviewed
• fast online publication
• no limitation on article length

Cellular Physiology and Biochemistry is a multidisciplinary scientific forum dedicated to advancing the frontiers of basic cellular research. It addresses scientists from both the physiological and biochemical disciplines as well as related fields such as genetics, molecular biology, pathophysiology, pathobiochemistry and cellular toxicology & pharmacology. Original papers and reviews on the mechanisms of intracellular transmission, cellular metabolism, cell growth, differentiation and death, ion channels and carriers, and the maintenance, regulation and disturbances of cell volume are presented. Appearing monthly under peer review, Cellular Physiology and Biochemistry takes an active role in the concerted international effort to unravel the mechanisms of cellular function.

This open access and online-only journal publishes original articles covering the entire spectrum of stroke and cerebrovascular research, drawing from a variety of specialties such as neurology, internal medicine, surgery, radiology, epidemiology, cardiology, hematology, psychology and rehabilitation. Offering an international forum, it meets the growing need for sophisticated, up-to-date scientific information on clinical data, diagnostic testing, and therapeutic issues. The journal publishes original contributions, reviews of selected topics as well as clinical investigative studies. All aspects related to clinical advances are considered, while purely experimental work appears only if directly relevant to clinical issues.

*Cerebrovascular Diseases Extra* provides additional contents based on reviewed and accepted submissions to the main journal *Cerebrovascular Diseases*. 

More information at [www.karger.com/cee](http://www.karger.com/cee)
Current Urology is an international peer-reviewed journal providing practical, timely, and state-of-the-art contributions on clinical research and experience in urology.

The journal encompasses all aspects of basic urological research, surgical and medical oncology, radiology, pathology, urolithiasis, andrology, reconstruction surgery, pediatric urology, female urology and urodynamics, erectile dysfunction, infertility, urinary infections and inflammations, endourology, and transplantation. Each issue contains reviews, original articles, surgical techniques, case reports, book reviews and correspondence. It is published online and in print.

Urologists, oncologists, pathologists, radiologists and scientists are invited to hand in their contributions to make Current Urology a viable international forum on latest findings in research and practice in urology.
This open access and online-only journal publishes original articles covering the entire spectrum of cognitive dysfunction such as Alzheimer’s and Parkinson’s disease, Huntington’s chorea and other neurodegenerative diseases.

The journal draws from diverse related research disciplines such as psychogeriatrics, neuropsychology, clinical neurology, morphology, physiology, genetic molecular biology, pathology, biochemistry, immunology, pharmacology and pharmaceutics. Strong emphasis is placed on the publication of research findings from animal studies which are complemented by clinical and therapeutic experience to give an overall appreciation of the field.

Dementia and Geriatric Cognitive Disorders Extra provides additional contents based on reviewed and accepted submissions to the main journal Dementia and Geriatric Cognitive Disorders.
Dermatopathology is a peer-reviewed online-only journal publishing original scientific articles dealing with diagnostic and experimental human and animal studies in dermatopathology. Contributions to clinicopathological correlations, studies based on current molecular technologies as well as controversial issues and case reports are welcome. The aim of the journal is to share interesting and most recent clinicopathological information with the community of dermatopathologists all over the world and to create a stronger link between dermatopathology, clinical dermatology and investigative dermatology. Dermatopathology also provides a resource for continuing medical education in cutaneous pathology. After acceptance, articles are published online very quickly, ensuring the rapid availability of scientific knowledge for all clinicians and researchers interested in this specialty. According to the open-access principle, the contents of the journal can be retrieved at all times without any charge.

More information at www.karger.com/dpa
Digital biomarkers are defined as objective, quantifiable physiological and behavioral data that are collected and measured by means of digital devices such as portables, wearables, implantables or digestibles. The data collected is typically used to explain, influence and/or predict health-related outcomes. Digital biomarkers also represent an opportunity to capture clinically meaningful, objective data. Multidisciplinary by design, this innovative open access journal bridges the disciplines of computer science, engineering, biomedicine, regulatory science and informatics. The editorial board includes leaders from academia, life sciences, technology and government, thus reflecting the broad scope of the journal. Papers are published within 60 days of submission and the inclusion of videos or other visual materials is supported.
Aims and Scope

The mission of the *Dubai Medical Journal* is to encourage innovative research by promoting original scientific research in the fields of medicine, health sciences, nursing, pharmaceuticals, and laboratory and other related sciences. Nonclinical subjects related to medicine, especially ethics and complementary medicine as well as social and cultural issues, are also covered. As international as Dubai itself, the journal offers a global perspective, but also focusses on the United Arab Emirates. Partnerships with local and international medical and health authorities are envisaged.

The journal facilitates the dissemination of information through research articles, review articles, case reports, editorials, letters, book reviews, meeting reports, and discussions. An educational corner will help to ensure continuous professional development and education. Besides this, the journal also offers a platform for controversies, mythology, and much more.

The Portuguese Journal of Gastroenterology (formerly Jornal Português de Gastrenterologia), founded in 1994, is the official publication of Sociedade Portuguesa de Gastrenterologia (Portuguese Society of Gastroenterology), Sociedade Portuguesa de Endoscopia Digestiva (Portuguese Society of Digestive Endoscopy) and Associação Portuguesa para o Estudo do Fígado (Portuguese Association for the Study of the Liver).

The journal publishes clinical and basic research articles on Gastroenterology, Digestive Endoscopy, Hepatology and related topics. Review articles, clinical case studies, images, letters to the editor and other articles such as recommendations or papers on gastroenterology clinical practice are also considered. Only articles written in English are accepted.

More information at www.karger.com/pjg
The International Journal of Diabetes and Metabolism welcomes original contributions on all aspects of diabetes, endocrinology and metabolism. Taking into account that diabetes has become a pandemic, the journal provides a platform for worldwide communication and scientific exchange to researchers and clinicians dealing with diabetes. The focus of the journal lies on the publication of papers on morphological, biochemical, physiological, pathophysiological, and clinical aspects of research on diabetes and metabolism. In addition to research articles, further types of papers such as review articles, case reports, letters, editorials and commentaries make the journal a comprehensive and interesting read. The researcher and practitioner who seeks to stay up-to-date on the developments in the fields of diabetes and metabolism will find a wealth of information in the International Journal of Diabetes and Metabolism.
The Journal of Innate Immunity is a bimonthly open access journal covering all aspects of innate immunity, including:

- Evolution of the Immune System
- Pattern Recognition and Signals of ‘Danger’
- Humoral Responses
- Cellular Mechanisms
- Host Response and Inflammation
- Mucosal Immunity
- Microbiota
- Systems Biology
- Cancer

The journal includes original papers and reviews in basic and clinical research. Subject areas such as microbiology, immunology and infectious diseases are also covered. It adheres to a very tight publication schedule: papers are published online within a few weeks of submission. In addition to regular articles, some issues feature a special section with a thematic focus.

This journal comprises both clinical and basic studies at the interface of nephrology, hypertension and cardiovascular research. The topics to be covered include the structural organization and biochemistry of the normal and diseased kidney, the molecular biology of transporters, the physiology and pathophysiology of glomerular filtration and tubular transport, endothelial and vascular smooth muscle cell function and blood pressure control, as well as water, electrolyte and mineral metabolism. Also discussed are the (patho)physiology and (patho)biochemistry of renal hormones, the molecular biology, genetics and clinical course of renal disease and hypertension, the renal elimination, action and clinical use of drugs, as well as dialysis and transplantation. Featuring peer-reviewed original papers, editorials translating basic science into patient-oriented research and disease, in depth reviews, and regular special topic sections, *Kidney & Blood Pressure Research* is an important source of information for researchers in nephrology and cardiovascular medicine.

Medical Cannabis and Cannabinoids

Editor-in-Chief
R. Brenneisen, Bern

Medical Cannabis and Cannabinoids is a peer-reviewed journal offering an international forum to present and discuss recent advances in the rapidly developing and challenging field of the medical use of cannabis and cannabinoids. It seeks to bridge the gap between empirical and evidence-based clinical medicine by covering current basic and applied as well as translational research topics. In addition to original papers, reviews and mini-reviews this journal features short communications, case-reports, technical notes, letters, and conference proceedings.

Obesity Facts publishes articles covering all aspects of obesity, in particular epidemiology, etiology and pathogenesis, treatment, and the prevention of adiposity. As obesity is related to many disease processes, the journal is also dedicated to all topics pertaining to comorbidity and covers psychological and sociocultural aspects as well as influences of nutrition and exercise on body weight. The editors carefully select papers to present only the most recent findings in clinical practice and research. All professionals concerned with obesity issues will find this journal a most valuable update to keep them abreast of the latest scientific developments.

Special sections comprising a variety of subspecialties reinforce the journal’s value as an exhaustive record of recent progress for all internists, gastroenterologists, endocrinologists, pediatricians, dieticians, nutritionists, bariatric surgeons, psychologists and psychiatrists, occupational health practitioners, sports medicine specialists, ecotrophologists, sociologists, and biologists as well as prevention and public health researchers. In addition, Obesity Facts serves as an ideal information tool for the members of the pharmaceutical and food industry as well as those active in nutritional research and medicine.

Using and Understanding Medical Statistics
5th, revised and extended edition

The fifth revised edition of this highly successful book presents the most extensive enhancement since *Using and Understanding Medical Statistics* was first published 30 years ago. Without question, the single greatest change has been the inclusion of source code, together with selected output, for the award-winning, open-source, statistical package known as R. This innovation has enabled the authors to de-emphasize formulae and calculations, and let software do all of the 'heavy lifting.'

This edition also introduces readers to several graphical statistical tools, such as Q-Q plots to check normality, residual plots for multiple regression models, funnel plots to detect publication bias in a meta-analysis and Bland-Altman plots for assessing agreement in clinical measurements. New examples that better serve the expository goals have been added to a half-dozen chapters. In addition, there are new sections describing exact confidence bands for the Kaplan-Meier estimator, as well as negative binomial and zero-inflated Poisson regression models for over-dispersed count data.

The end result is not only an excellent introduction to medical statistics, but also an invaluable reference for every discerning reader of medical research literature.

**Contents**

Preface to the Fifth Edition
Prefaces to the Previous Editions

- Basic Concepts
- Tests of Significance
- Fisher’s Test for $2 \times 2$ Contingency Tables
- Approximate Significance Tests for Contingency Tables
- Some Warnings concerning $2 \times 2$ Tables
- Kaplan-Meier or ‘Actuarial’ Survival Curves
- The Log-Rank or Mantel-Haenszel Test for Comparing Survival Curves
- An Introduction to the Normal Distribution
- Analyzing Normally Distributed Data
- Linear Regression Models for Medical Data
- Binary Logistic Regression
- Regression Models for Count Data
- Proportional Hazards Regression
- The Analysis of Longitudinal Data
- Analysis of Variance
- Data Analysis
- The Question of Sample Size
- The Design of Clinical Trials
- Further Comments regarding Clinical Trials
- Meta-Analysis
- Epidemiological Applications
- Diagnostic Tests
- Agreement and Reliability

Basic and clinical research topics across the entire medical spectrum

Backed by a 128-year tradition of medical publishing, the Karger journal program comprises 80 subscription journals to date, covering all disciplines of human medicine in clinical and research areas.

Your Benefits:

- DRM-free content
- COUNTER-compliant statistics
- KBART records for eJournals
- Free online trials available!
- Guaranteed access for five years (perpetual access available)
- Easy access via IP address or User ID and password
- Unlimited simultaneous access

- Access to all online Karger journals – special arrangements for consortia
- Customized collections according to the needs of your library
- Mixed collections of eJournals and eBooks upon request

Please contact us for a customized offer!

- 63 eJournals from 1998 to 2016 covering substantial progress in disciplines of human medicine in clinical and research areas over the past decades
- Purchase the complete Karger eJournal Backfile Collection at CHF 24,000 / EUR 21,600 / USD 25,600
- Benefit from attractive flat rates for backfiles of individual titles.
- Customize your Backfile Collection. Please ask us for a quote!

- All digitized Karger journal issues from 1997 back to each title’s first year of publication, including additional 12 prestigious Karger journals.
- The revised and expanded collection consists of 76 titles with a total of 2,423 publication years.
- Purchase the complete Karger eJournal Archive Collection at CHF 62,000 / EUR 55,000 / USD 69,000
- Customize to suit your needs at attractive flat rates.
- Special upgrade fee for existing eJournal Archive Collection customers. Please contact us for prices and title information.

All prices excl. VAT and local sales tax. EUR prices for eurozone countries, USD prices for USA and Latin America only.

Contact us at collection@karger.com for a customized quote according to your specific needs!
Covering all disciplines of human medicine

The longest-standing and most popular Karger eBook program comprises over 2,600 titles of serial and non-serial books. The eBook Collection Program offers fast, convenient and seamless online access to specific content for medical researchers and scientists.

Your Benefits:
- DRM-free content
- Guaranteed access for five years (perpetual access available)
- Unlimited simultaneous access
- Easy access via IP address or User ID and password
- Increasing number of titles in Epub format, all titles in PDF and HTML formats
- MARC 21 and KBART records, complimentary downloads for all eBooks
- COUNTER-compliant statistics

Karger eBook Collection

As of collection year 2019, the Karger eBook Series Collection and the Karger eBook Non-Series Collection have been merged and are now included in all Karger eBook packages. The Karger eBook Collection 2018/2019 is a biennial volume – it comprises two years in one collection.

The flexibility of the Karger Collection Program makes it truly unique. The eBook Collection Program can be purchased as a complete collection as well as a customized collection, composed of individual book titles chosen by the buyer. In addition, it can be supplemented by further eBook and/or eJournal Collections.

Even German language titles are available as add-ons.

As an alternative to the existing offerings an evidence-based acquisition option (EBA) is now available for the eBook Collection Program. For more details please visit our website or contact us at collection@karger.com.

- Karger eBook Collection 2018/2019 (approx. 30 titles) CHF 4,700 / EUR 4,100 / USD 4,900
- Karger eBook Collection 3-Year Package 2016–2018/2019 (approx. 105) CHF 8,500 / EUR 7,300 / USD 8,900
- Karger eBook Back Volume Collection 1997–2015 (total 742 titles) CHF 13,900 / EUR 12,000 / USD 14,600

Karger eBook Archive Collection

To mark the occasion of Karger Publishers’ 125th anniversary, all book titles from 1996 back to 1890 were digitized, making the rich heritage of pioneering Karger publications available to today’s medical and scientific community.

- Karger eBook Archive Collection Series (total 1,281 titles) CHF 25,000 / EUR 23,500 / USD 25,500
- Karger eBook Archive Collection Non-Series (total 549 titles) CHF 12,000 / EUR 11,400 / USD 12,400
- Karger eBook Archive Collection German (total 626 titles) CHF 10,000 / EUR 9,500 / USD 10,500

All prices excl. VAT and local sales tax. EUR prices for eurozone countries, USD prices for USA and Latin America only.

Please visit www.karger.com/services/ebooksrecords for detailed lists, or contact us for a customized offer at collection@karger.com.
Karger Fast Facts Collection

The ultimate medical handbook series

Concise informative guides for busy medical professionals, and practical workbooks for patients. Designed to advance knowledge in health, these highly readable resources are packed with clear, comprehensive and relevant information on specific diseases, their diagnosis and management. The series comprises 78 handbooks (2001–June 2018): ideal primers to get up to speed – fast, and to help patients ask the right questions. For more details please refer to www.karger.com/collections/fastfacts and contact us at collection@karger.com.

www.karger.com/collections/fastfacts

- Karger Fast Facts Collection Complete (78 Titles): CHF 7,000 / EUR 5,100 / USD 7,000
- Karger Fast Facts Titles 2017 (10 Titles): CHF 1,060 / EUR 750 / USD 1,050
- Karger Fast Facts Titles 2016 (12 Titles): CHF 1,250 / EUR 900 / USD 1,200
- Karger Fast Facts Titles 2006-2015 (40 Titles): CHF 3,000 / EUR 2,150 / USD 3,000

All prices excl. VAT and local sales tax. EUR prices for eurozone countries, USD prices for USA and Latin America only.

Karger Subject Packages

Packages focusing on a single research or medical subject

The Karger Subject Packages – comprising eJournals and eBooks – provide highly selected content to meet the increasing demand for specific information by researchers, specialists and practitioners in hospitals, research centers, the pharmaceutical industry and other professional institutions. Each package presents a high-quality selection of peer-reviewed eJournals, established eBook series and individual eBook titles. For more details please visit the website at www.karger.com/packages-overview, or contact us at collection@karger.com for a customized quote according to your specific needs.

Already available packages:

Rediscover Vesalius
The medical revolution of the 16th century brought to life for the 21st century

ANDREAS VESALIUS

The Fabric of the Human Body
An Annotated Translation of the 1543 and 1555 Editions of “De Humani Corporis Fabrica” by
DANIEL H. GARRISON
MALCOLM H. HAST
with contributions by Vivian Nutton and Nancy Siraisi

For the first time ever, both editions of Andreas Vesalius’ masterpiece “De Humani Corporis Fabrica” are accessible in the English language. They were critically compared and published in a modern layout transforming the Renaissance anatomical atlas for the 21st-century reader. More than 5,000 annotations cover anything from antique sources over Galenic references to the medical and cultural background of Vesalius’ time. Also included are Vesalius’ handwritten notes for a never published third edition.

To enable the reader and medical student to really study Vesalius’ woodcut illustrations, the images were digitally enhanced and often enlarged to feature his painstaking work of marking each pertinent anatomical part with characters. All over Vesalius’ descriptive text, the standard Latin Nomina Anatomica and Terminologia Anatomica provide the reader with the modern medical terminology.

Vesalius, A., The Fabric of the Human Body
An Annotated Translation of the 1543 and 1555 Editions of “De Humani Corporis Fabrica Libri Septem” by D.H. Garrison and M.H. Hast
CXX + 1338 p., 340 fig., in two volumes, hard cover, with slip case, 2014

History of the Basel Institute for Immunology
Compiled and narrated by Ivan Lefkovits

By the early seventies of the 20th century, the Basel Institute for Immunology had become one of the largest—and certainly the most prominent—immunology institutes in the world. Its lean structure was highly successful, and the quality of the research and its reputation remained outstandingly high throughout the three decades it existed.

This book describes the institute’s history from its conception and the laying of the foundation stone in 1969 by the pharmaceutical company Roche to the triumph of three Nobel Prizes (1984 and 1987) for Niels K. Jerne, Georges Köhler and Susumu Tonegawa. Can all this be portrayed to make the layman understand it and the scientist relish it?

Indeed, the book succeeds in tuning in to what fascinates students, advanced researchers and scientists, historians, policy makers and philanthropists alike. The narrative reveals many aspects of the institute’s life and also describes all its research and achievements. Immunologists at every level, from beginners to old hands, will find something of interest to them in this history volume, and some readers will even make use of the huge database (documents, pictures and films) linked to the book by hundreds of QR codes.

Contents

• The History of Scientific Achievements and of the Social Impact of the Basel Institute for Immunology
  • Preface
  • The Storyteller’s Dilemma
  • Book 1: 1969–1985
  • Book 2: 1985–2001
  • Remembering the Basel Institute for Immunology
  • Acknowledgements
  • Subject Index

Three BMA awards for Karger Publishers

We are delighted to announce that three Karger titles received ‘Highly Commended’ awards by the British Medical Association in their prestigious 2017 Medical Book Competition:

In the category ‘Medicine’

**HIV and Aging**
Editors: Brennan-Ing, M. (New York, NY); DeMarco, R.F. (Boston, MA)
X + 244 p., 12 fig., 12 tab., hard cover, 2017
www.karger.com/itoge

In the category ‘Internal Medicine’

**Itch – Management in Clinical Practice**
Editors: Szepietowski, J. (Wrocław); Weisshaar, E. (Heidelberg)
VIII + 210 p., 26 fig., 26 in color, 36 tab., hard cover, 2016
www.karger.com/cupde

In the category ‘Paediatrics’

**SickKids Handbook of Pediatric Thrombosis and Hemostasis**
2nd, revised and extended edition
Editors: Blanchette, V.S.; Brandão, L.A. (Toronto, ON); Breakey, V.R. (Hamilton, ON); Revel-Vilk, S. (Jerusalem)
XX + 338 p., 37 fig., 13 in color, 80 tab., hard cover, 2017
www.karger.com/sickkids

Karger titles which received awards in previous BMA Medical Book Competitions

**Tattooed Skin and Health**
Editors: J. Grzyb; M. Wanger; W. Kuwai

**Retinal Pharmacotherapeutics**

**Immu-no-Oncology**
Editors: G. Michailid; G. Grünert

**Oluwosimi and Rauzer’s Cytoarchitecture of the Human Brainstem**
Editors: F. Rauzer; O. Olusosimi

## Order Information

### Books

Book orders can be placed at any bookstore, directly with Karger Publishers or with one of our representatives. Please indicate the ISBN number of any title you wish to order. The e-ISBN refers to the electronic version of a title. Deliveries are made from Karger headquarters in Basel, Switzerland. All Karger book titles, with a few exceptions, are available in print and online (eBooks); for availability and prices, please see the title's homepage at [www.karger.com](http://www.karger.com) or contact us at [orders@karger.com](mailto:orders@karger.com).

#### eBooks

When ordering a book with an online component, the customer is required to complete a site license (see [www.karger.com/form/license](http://www.karger.com/form/license)). For repeat online customers, there is an appropriate field in the order form. Bookstores should submit a site license completed by the end user, together with the order. Private customers can also order Karger eBooks via Google and Amazon.

#### Continuation Orders for Book Series

Continuation orders can be placed for print and online formats. Such orders bring the benefit of automatic continuity under the order number. Orders can be cancelled at any time.

The complete order information can be found on our website at [www.karger.com/services/bookorders](http://www.karger.com/services/bookorders).

### Journals

Journal subscriptions can be placed at any bookstore, subscription agency, directly with Karger Publishers, or with one of our representatives.

#### Subscriptions

Karger offers three types of subscription: print, online, and combined print/online. The basic annual subscription rate is the same for all three delivery forms; however, there are additional fees for print and combined print/online.

#### Subscription Rate Model

- **Print**: 100% + postage and handling
- **Online**: 100%
- **Combined print/online**: 100% + upgrade fee + postage and handling

For personal subscription prices, please consult our website at [www.karger.com/journals](http://www.karger.com/journals). For online and combined print/online subscriptions, please also consult [www.karger.com/sitelicenses](http://www.karger.com/sitelicenses). All subscriptions are payable in advance.

#### Subscription Period

Print subscriptions run for a full calendar year and may cover more than one volume. New subscriptions placed during the year will begin with the delivery of back issues for that subscription year. An online subscription allows access only to issues published in the subscription year. For questions and problems contact us at [service@karger.com](mailto:service@karger.com).

#### Authorized Access

Access is regulated via IP address(es) and/or user ID/password. Karger supports both Shibboleth and OpenAthens.

#### Back Volumes and Single Issues

Information on availability and prices of single print issues, print back volumes or electronic backfiles can be obtained at [www.karger.com](http://www.karger.com).

For complete order information, please refer to our website at [www.karger.com/orderinformation](http://www.karger.com/orderinformation).

### Prices, Ordering and Contact

Unless otherwise stated, the online price applies to institutional purchases; the online price for private customers is the same as the hardcover resp. softcover (print) price.

All prices are based on the Swiss Franc (CHF) and subject to change. Prices in EUR are valid for eurozone countries only, prices in USD are valid for the USA and Latin America only. Prices quoted do not include delivery charges and are excluding VAT and local sales tax. Where applicable, VAT is applied at the appropriate rate and shown separately in the final invoice.

Contact details of the Karger offices and distributors can be found at [www.karger.com/contact](http://www.karger.com/contact). Every book and journal homepage offers an online order form. Orders can also be e-mailed to [orders@karger.com](mailto:orders@karger.com).

Please note that due to bank regulations Karger Publishers accepts checks only for payments above the amount of CHF/EUR/USD 5,000. If you have any questions, please do not hesitate to contact our Customer Service at [orders@karger.com](mailto:orders@karger.com).

### Information Service

The Karger Alert system informs you about all new article, journal or book releases in your field of interest. Login on [www.karger.com](http://www.karger.com), set up your MyKarger account, and sign up for customized alerts.
